ART. 41. The manufacture and the sale of gunpowder throughout Switzerland pertain exclusively to the Confederation. Powders used for blasting and not suitable for shooting are not included in the monopoly.

ART. 42. The expenditures of the Confederation are met as follows: (a) Out of the income from federal property. (b) Out of the proceeds of the federal customs levied at the Swiss frontier. (c) Out of the proceeds of the posts and telegraphs. (d) Out of the proceeds of the powder monopoly. (e) Out of half of the gross receipts from the tax on military exemptions levied by the Cantons. (f) Out of the contributions of the Cantons, which shall be determined by federal legislation, with special reference to their wealth and taxable resources.

ART. 43. Every citizen of a Canton is a Swiss citizen. As such he may participate, in the place where he is domiciled, in all federal elections and popular votes, after having duly proven his qualification as a voter. No person can exercise political rights in more than one Canton. The Swiss settled as a citizen outside his native Canton enjoys in the place where he is domiciled, all the rights of the citizens of the Canton, including all the rights of the communal citizen. Participation in municipal and corporate property, and the right to vote upon

purely municipal affairs, are excepted from such rights, unless the Canton by legislation has otherwise provided. In cantonal and communal affairs, he gains the right to vote after a residence of three months. Cantonal laws relating to the right of Swiss citizens to settle outside the Cantons in which they were born, and to vote on communal questions, are submitted for the approval of the Federal Council.

ART. 44. No Canton shall expel from its territory one of its own citizens, nor deprive him of his rights, whether acquired by birth or settlement. [Origine ou cité.] Federal legislation shall fix the conditions upon which foreigners may be naturalized, as well as those upon which a Swiss may give up his citizenship in order to obtain naturalization in a foreign country.

ART. 45. Every Swiss citizen has the right to settle anywhere in Swiss territory, on condition of submitting a certificate of origin, or a similar document. By exception, settlement may be refused to or withdrawn from, those who, in consequence of a penal conviction, are not entitled to civil rights. In addition, settlement may be withdrawn from those who have been repeatedly punished for serious offenses, and also from those who permanently come upon the charge of public charity, and to whom their Commune or Canton of origin, as the case may be, refuses sufficient succor, after they have been officially asked to grant it. In the Cantons where the poor are relieved in their place of residence the permission to settle, if it relates to citizens of the Canton, may be coupled with the condition that they shall be able to work, and that they shall not, in their former domicile in the Canton of origin, have permanently become a charge on public charity. Every expulsion on account of poverty must be approved by the government of the Canton of domicile, and previously announced to the government of the Canton of origin. A Canton in which a Swiss establishes his domicile may not require security, nor impose any special obligations for such establishment. In like manner the Communes cannot require from Swiss domiciled in their territory other contributions than those which they require from their own subjects. A federal law shall establish the maximum fee to be paid the Chancery for a permit to settle.

ART. 46. Persons settled in Switzerland are, as a rule, subjected to the jurisdiction and legislation of their domicile, in all that pertains to their personal status and property rights. The Confederation shall by law make the provisions necessary for the application of this principle and for the prevention of double taxation of a citizen.

ART. 47. A federal law shall establish the distinction between settlement and temporary residence, and shall at the same time make the regulations to which Swiss temporary residents shall be subjected as to their political rights and their civil rights.

ART. 48. A federal law shall provide for the regulation of the expenses of the illness and burial of indigent persons amenable to one Canton, who have fallen ill or died in another Canton.

ART. 49. Freedom of conscience and belief is inviolable. No person can be constrained to take part in a religious society, to attend religious instruction, to perform a religious rite, or to incur

penalties of any kind whatever on account of religious opinion. The person who exercises the parent's or guardian's authority has the right, conformably to the principles above stated, to regulate the religious education of children up to the age of sixteen completed years. The exercise of civil or political rights shall not be abridged by any provisions or conditions whatever of an ecclesiastical or religious kind. No person shall, on account of a religious belief, release himself from the accomplishment of a civil duty. No person is bound to pay taxes of which the proceeds are specifically appropriated to the actual expenses of the worship of a religious body to which he does not belong. The details of the carrying out of this principle are reserved for federal legislation.

ART. 50. The free exercise of religious worship is guaranteed within the limits compatible with public order and good morals. The Cantons and the Confederation may take suitable measures for the preservation of public order and of peace between the members of different religious bodies, and also against encroachments of ecclesiastical authorities upon the rights of citizens and of the State. Contests in public and private law, which arise out of the formation or the division of religious bodies, may be brought by appeal before the competent federal authorities. No bishopric shall be created upon Swiss territory without the consent of the Confederation.

ART. 51. The order of the Jesuits, and the societies affiliated with them, shall not be received into any part of Switzerland; and all action in church and school is forbidden to its members. This prohibition may be extended also, by federal ordinance, to other religious orders, the action of which is dangerous to the state or disturbs the peace between sects.

ART. 52. The foundation of new convents or religious orders, and the reestablishment of those which have been suppressed, are forbidden.

ART. 53. The civil status and the keeping of records thereof is subject to the civil authority. The Confederation shall by law enact detailed provisions upon this subject. The control of places of burial is subject to the civil authority. It shall take care that every deceased person may be decently interred.

ART. 54. The right of marriage is placed under the protection of the Confederation. No limitation upon marriage shall be based upon sectarian grounds, nor upon the poverty of either of the contractants, nor on their conduct, nor on any other consideration of good order. A marriage contracted in a Canton or in a foreign country, conformably to the law which is there in force, shall be recognized as valid throughout the Confederation. By marriage the wife acquires the citizenship of her husband. Children born before the marriage are made legitimate by the subsequent marriage of their parents. No tax upon admission or similar tax shall be levied upon either party to a marriage.

ART. 55. The freedom of the press is guaranteed. Nevertheless the Cantons by law enact the measures necessary for the suppression of abuses. Such laws are submitted for the approval of the Federal Council. The Confederation may enact penalties for the suppression of press offenses directed against it or its authorities.

ART. 56. Citizens have the right of forming associations, provided that there be in the pur-

pose of such associations, or in the means which they employ, nothing unlawful or dangerous to the state. The Cantons by law take the measures necessary for the suppression of abuses.

ART. 57. The right of petition is guaranteed.

ART. 58. No person shall be deprived of his constitutional judge. Therefore no extraordinary tribunal shall be established. Ecclesiastical jurisdiction is abolished.

ART. 59. Suits for personal claims against a solvent debtor having a domicile in Switzerland, must be brought before the judge of his domicile; in consequence, his property outside the Canton in which he is domiciled may not be attached in suits for personal claims. Nevertheless, with reference to foreigners, the provisions of international treaties shall not thereby be affected. Imprisonment for debt is abolished.

ART. 60. All the Cantons are bound to treat the citizens of the other confederated States like those of their own State in legislation and in all judicial proceedings.

ART. 61. Civil judgments definitely pronounced in any Canton may be executed anywhere in Switzerland.

ART. 62. The exit duty on property [*traite foraine*] is abolished in the interior of Switzerland, as well as the right of redemption [*droit de retrait*] by citizens of one Canton against those of other confederated States.

ART. 63. The exit duty on property is abolished as respects foreign countries, provided reciprocity be observed.

ART. 64. The Confederation has power to make laws: On legal competency. On all legal questions relating to commerce and to transactions affecting chattels (law of commercial obligations, including commercial law and law of exchange). On literary and artistic copyright. On the protection of new patterns and forms, and of inventions which are represented in models and are capable of industrial application. [*Amendment of Dec. 20, 1887.*] On the legal collection of debts and on bankruptcy. The administration of justice remains with the Cantons, save as affected by the powers of the Federal Court.

[ART. 65. (*Abrogated by Amendment of June 20, 1879.*) *The death penalty is abolished; nevertheless the provisions of military law in time of war shall be observed. Corporal punishment is abolished.*]

ART. 65. [*Amendment of June 20, 1879.*] No death penalty shall be pronounced for a political crime. Corporal punishment is abolished.

ART. 66. The Confederation by law fixes the limits within which a Swiss citizen may be deprived of his political rights.

ART. 67. The Confederation by law provides for the extradition of accused persons from one Canton to another; nevertheless, extradition shall not be made obligatory for political offenses and offenses of the press.

ART. 68. Measures are taken by federal law for the incorporation of persons without country (*Heimathlosen*), and for the prevention of new cases of that nature.

ART. 69. Legislation concerning measures of sanitary police against epidemic and cattle diseases, causing a common danger, is included in the powers of the Confederation.

ART. 70. The Confederation has power to expel from its territory foreigners who endanger the internal or external safety of Switzerland.

Chapter II.—ART. 71. With the reservation of the rights of the people and of the Cantons (Articles 89 and 121), the supreme authority of the Confederation is exercised by the Federal Assembly, [Assemblée fédérale; Bundesversammlung] which consists of two sections or councils, to wit: (A) The National Council. (B) The Council of States.

ART. 72. The National Council [Conseil National; Nationalrath] is composed of representatives of the Swiss people, chosen in the ratio of one member for each 20,000 persons of the total population. Fractions of upwards of 10,000 persons are reckoned as 20,000. Every Canton, and in the divided Cantons every Half-Canton, chooses at least one representative.

ART. 73. The elections for the National Council are direct. They are held in federal electoral districts, which in no case shall be formed out of parts of different Cantons.

ART. 74. Every Swiss who has completed twenty years of age, and who in addition is not excluded from the rights of a voter by the legislation of the Canton in which he is domiciled, has the right to vote in elections and popular votes. Nevertheless, the Confederation by law may establish uniform regulations for the exercise of such right.

ART. 75. Every lay Swiss citizen who has the right to vote is eligible for membership in the National Council.

ART. 76. The National Council is chosen for three years, and entirely renewed at each general election.

ART. 77. Representatives to the Council of States, members of the Federal Council, and officials appointed by that Council, shall not at the same time be members of the National Council.

ART. 78. The National Council chooses out of its own number, for each regular or extraordinary session, a President and a Vice-President. A member who has held the office of President during a regular session is ineligible either as President or Vice-President at the next regular session. The same member may not be Vice-President during two consecutive regular sessions. When the votes are equally divided the President has a casting vote; in elections he votes in the same manner as other members.

ART. 79. The members of the National Council receive a compensation out of the federal treasury.

ART. 80. The Council of States [Conseil des États; Ständerath] consists of forty-four representatives of the Cantons. Each Canton appoints two representatives; in the divided Cantons, each Half-State chooses one.

ART. 81. The members of the National Council and those of the Federal Council may not be representatives in the Council of States.

ART. 82. The Council of States chooses out of its own number for each regular or extraordinary session a President and a Vice-President. Neither the President nor the Vice-President can be chosen from among the representatives of the Canton from which the President has been chosen for the regular session next preceding. Representatives of the same Canton cannot occupy the position of Vice-President during two consecutive regular sessions. When the votes are equally divided the President has a casting vote; in elections he votes in the same manner as the other members.

ART. 83. Representatives in the Council of States receive a compensation from the Cantons.

ART. 84. The National Council and the Council of States consider all the subjects which the present Constitution places within the competence of the Confederation, and which are not assigned to any other federal authority.

ART. 85. The subjects within the competence of the two Councils are particularly the following: 1. Laws on the organization of and election of federal authorities. 2. Laws and ordinances on subjects which by the Constitution are placed within the federal competence. 3. The salary and compensation of members of the federal governing bodies and of the Federal Chancery; the creation of federal offices and the determination of salaries therefor. 4. The election of the Federal Council, of the Federal Court, and of the Chancellor, and also of the Commander-in-chief of the federal army. The Confederation may by law assign to the Federal Assembly other powers of election or of confirmation. 5. Alliances and treaties with foreign powers, and also the approval of treaties made by the Cantons between themselves or with foreign powers; nevertheless the treaties made by the Cantons shall be brought before the Federal Assembly only in case the Federal Council or another Canton protests. 6. Measures for external safety and also for the maintenance of the independence and neutrality of Switzerland; the declaration of war and the conclusion of peace. 7. The guaranty of the Constitution and of the territory of the Cantons; intervention in consequence of such guaranty; measures for the internal safety of Switzerland, for the maintenance of peace and order; amnesty and pardon. 8. Measures for the preservation of the Constitution, for carrying out the guaranty of the cantonal constitutions, and for fulfilling federal obligations. 9. The power of controlling the federal army. 10. The determination of the annual budget, the audit of public accounts, and federal ordinances authorizing loans. 11. The superintendence of federal administration and of federal courts. 12. Protests against the decisions of the Federal Council upon administrative conflicts. (Art. 113.) 13. Conflicts of jurisdiction between federal authorities. 14. The amendment of the federal Constitution.

ART. 86. The two Councils assemble annually in regular session upon a day to be fixed by the standing orders. They are convened in extra session by the Federal Council upon the request either of one fourth of the members of the National Council, or of five Cantons.

ART. 87. In either Council a quorum is a majority of the total number of its members.

ART. 88. In the National Council and in the Council of States a majority of those voting is required.

ART. 89. Federal laws, enactments, and resolutions shall be passed only by the agreement of the two Councils. Federal laws shall be submitted for acceptance or rejection by the people, if the demand is made by 30,000 voters or by eight Cantons. The same principle applies to federal resolutions which have a general application, and which are not of an urgent nature.

ART. 90. The Confederation shall by law establish the forms and intervals to be observed in popular votes.

ART. 91. Members of either Council vote without instructions.

ART. 92. Each Council takes action separately. But in the case of the elections specified in Article 85, § 4, of pardons, or of deciding a conflict of jurisdiction (Art. 85, § 13), the two Councils meet in joint session, under the direction of the President of the National Council, and a decision is made by the majority of the members of both Councils present and voting.

ART. 93. Measures may originate in either Council, and may be introduced by any of their members. The Cantons may by correspondence exercise the same right.

ART. 94. As a rule, the sittings of the Councils are public.

ART. 95. The supreme direction and executive authority of the Confederation is exercised by a Federal Council [*Conseil fédéral; Bundesrath*], composed of seven members.

ART. 96. The members of the Federal Council are chosen for three years by the Councils in joint session from among all the Swiss citizens eligible to the National Council. But not more than one member of the Federal Council shall be chosen from the same Canton. The Federal Council is chosen anew after each election of the National Council. Vacancies which occur in the course of the three years are filled at the first ensuing session of the Federal Assembly, for the remainder of the term of office.

ART. 97. The members of the Federal Council shall not, during their term of office, occupy any other office, either in the service of the Confederation or in a Canton, or follow any other pursuit, or exercise a profession.

ART. 98. The Federal Council is presided over by the President of the Confederation. There is a Vice-President. The President of the Confederation and the Vice-President of the Federal Council are chosen for one year by the Federal Assembly from among the members of the Council. The retiring President shall not be chosen as President or Vice-President for the year ensuing. The same member shall not hold the office of Vice-President during two consecutive years.

ART. 99. The President of the Confederation and the other members of the Federal Council receive an annual salary from the federal treasury.

ART. 100. A quorum of the Federal Council consists of four members.

ART. 101. The members of the Federal Council have the right to speak but not to vote in either house of the Federal Assembly, and also the right to make motions on the subject under consideration.

ART. 102. The powers and the duties of the Federal Council, within the limits of this Constitution, are particularly the following: 1. It conducts federal affairs, conformably to the laws and resolutions of the Confederation. 2. It takes care that the Constitution, federal laws and ordinances, and also the provisions of federal concordats, be observed; upon its own initiative or upon complaint, it takes measures necessary to cause these instruments to be observed, unless the consideration of redress be among the subjects which should be brought before the Federal Court, according to Article 113. 3. It takes care that the guaranty of the cantonal constitutions be observed. 4. It intro-

duces bills or resolutions into the Federal Assembly, and gives its opinion upon the proposals submitted to it by the Councils or the Cantons. 5. It executes the laws and resolutions of the Confederation and the judgments of the Federal Court, and also the compromises or decisions in arbitration upon disputes between Cantons. 6. It makes those appointments which are not assigned to the Federal Assembly, Federal Court, or other authority. 7. It examines the treaties made by Cantons with each other, or with foreign powers, and approves them, if proper. (Art. 85, § 5.) 8. It watches over the external interests of the Confederation, particularly the maintenance of its international relations, and is, in general, intrusted with foreign relations. 9. It watches over the external safety of Switzerland, over the maintenance of independence and neutrality. 10. It watches over the internal safety of the Confederation, over the maintenance of peace and order. 11. In cases of urgency, and when the Federal Assembly is not in session, the Federal Council has power to raise the necessary troops and to employ them, with the reservation that it shall immediately summon the Councils if the number of troops exceeds two thousand men, or if they remain in arms more than three weeks. 12. It administers the military establishment of the Confederation, and all other branches of administration committed to the Confederation. 13. It examines such laws and ordinances of the Cantons as must be submitted for its approval; it exercises supervision over such departments of the cantonal administration as are placed under its control. 14. It administers the finances of the Confederation, introduces the budget, and submits accounts of receipts and expenses. 15. It supervises the conduct of all the officials and employees of the federal administration. 16. It submits to the Federal Assembly at each regular session an account of its administration and a report of the condition of the Confederation, internal as well as external, and calls attention to the measures which it deems desirable for the promotion of the general welfare. It also makes special reports when the Federal Assembly or either Council requires it.

ART. 103. The business of the Federal Council is distributed by departments among its members. This distribution has the purpose only of facilitating the examination and despatch of business; decisions emanate from the Federal Council as a single authority.

ART. 104. The Federal Council and its departments have power to call in experts on special subjects.

ART. 105. A Federal Chancery [*Chancellerie fédérale; Bundeskanzlei*], at the head of which is placed the Chancellor of the Confederation, conducts the secretary's business for the Federal Assembly and the Federal Council. The Chancellor is chosen by the Federal Assembly for the term of three years, at the same time as the Federal Council. The Chancery is under the special supervision of the Federal Council. A federal law shall provide for the organization of the Chancery.

ART. 106. There shall be a Federal Court [*Tribunal fédéral; Bundesgericht*] for the administration of justice in federal concerns. There shall be, moreover, a jury for criminal cases. (Art. 112.)

ART. 107. The members and alternates of the Federal Court shall be chosen by the Federal Assembly, which shall take care that all three national languages are represented therein. A law shall establish the organization of the Federal Court and of its sections, the number of judges and alternates, their term of office, and their salary.

ART. 108. Any Swiss citizen eligible to the National Council may be chosen to the Federal Court. The members of the Federal Assembly and of the Federal Council, and officials appointed by those authorities, shall not at the same time belong to the Federal Court. The members of the Federal Court shall not, during their term of office, occupy any other office, either in the service of the Confederation or in a Canton, nor engage in any other pursuit, nor practice a profession.

ART. 109. The Federal Court organizes its own Chancery and appoints the officials thereof.

ART. 110. The Federal Court has jurisdiction in civil suits: 1. Between the Confederation and the Cantons. 2. Between the Confederation on one part and corporations or individuals on the other part, when such corporations or individuals are plaintiffs, and when the amount involved is of a degree of importance to be determined by federal legislation. 3. Between Cantons. 4. Between Cantons on one part and corporations or individuals on the other part, when one of the parties demands it, and the amount involved is of a degree of importance to be determined by federal legislation. It further has jurisdiction in suits concerning the status of persons not subjects of any government (*heimathlos*), and the conflicts which arise between Communes of different Cantons respecting the right of local citizenship. [*Droit de cité.*]

ART. 111. The Federal Court is bound to give judgment in other cases when both parties agree to abide by its decision, and when the amount involved is of a degree of importance to be determined by federal legislation.

ART. 112. The Federal Court, assisted by a jury to decide upon questions of fact, has criminal jurisdiction in: 1. Cases of high treason against the Confederation, of rebellion or violence against federal authorities. 2. Crimes and misdemeanors against the law of nations. 3. Political crimes and misdemeanors which are the cause or the result of disturbances which occasion armed federal intervention. 4. Cases against officials appointed by a federal authority, where such authority relegates them to the Federal Court.

ART. 113. The Federal Court further has jurisdiction: 1. Over conflicts of jurisdiction between federal authorities on one part and cantonal authorities on the other part. 2. Disputes between Cantons, when such disputes are upon questions of public law. 3. Complaints of violation of the constitutional rights of citizens, and complaints of individuals for the violation of concordats or treaties. Conflicts of administrative jurisdiction are reserved, and are to be settled in a manner prescribed by federal legislation. In all the fore-mentioned cases the Federal Court shall apply the laws passed by the Federal Assembly and those resolutions of the Assembly which have a general import. It shall in like manner conform to treaties which shall have been ratified by the Federal Assembly.

ART. 114. Besides the cases specified in Articles 110, 112, and 113, the Confederation may by law place other matters within the jurisdiction of the Federal Court; in particular, it may give to that court powers intended to insure the uniform application of the laws provided for in Article 64.

ART. 115. All that relates to the location of the authorities of the Confederation is a subject for federal legislation.

ART. 116. The three principal languages spoken in Switzerland, German, French, and Italian, are national languages of the Confederation.

ART. 117. The officials of the Confederation are responsible for their conduct in office. A federal law shall enforce this responsibility.

Chapter III. [*(These four articles abrogated by the four articles following them, 118-122.)*] ART. 118. The Federal Constitution may at any time be amended.

ART. 119. Amendment is secured through the forms required for passing federal laws.

ART. 120. When either Council of the Federal Assembly passes a resolution for amendment of the Federal Constitution and the other Council does not agree; or when fifty thousand Swiss voters demand amendment, the question whether the Federal Constitution ought to be amended is, in either case, submitted to a vote of the Swiss people, voting yes or no. If in either case the majority of the Swiss citizens who vote pronounce in the affirmative, there shall be a new election of both Councils for the purpose of preparing amendments.

ART. 121. The amended Federal Constitution shall be in force when it has been adopted by the majority of Swiss citizens who take part in the vote thereon and by a majority of the States. In making up a majority of the States the vote of a Half-Canton is counted as half a vote. The result of the popular vote in each Canton is considered to be the vote of the State.]

ART. 118. [Amendment of July 5, 1891.] The Federal Constitution may at any time be amended as a whole or in part.

ART. 119. [Amendment of July 5, 1891.] General revision is secured through the forms required for passing the federal laws.

ART. 120. When either Council of the Federal Assembly passes a resolution for general revision and the other Council does not agree; or when fifty thousand Swiss voters demand general revision the question whether there shall be such a revision must, in either case, be submitted to the popular vote of the Swiss people. If, in either case, the majority of the Swiss citizens who vote on the question pronounce in the affirmative, there shall be a new election of both Councils for the purpose of preparing a general revision.

ART. 121. [Amendment of July 5, 1891.] Specific amendments may be brought forward either through a Proposition of the People [*Volksanregung*] (Initiative) or by Federal legislation. A Proposition of the People means a demand supported by fifty thousand Swiss voters, either for suspension, repeal, or alteration of specified articles of the Federal Constitution. If by means of the method of Proposition of the People several different subjects are brought forward either for alteration or for incorporation into the Federal Constitution, each one of those separate subjects must be presented in a separate demand

CONSTITUTION: SWITZERLAND.

CONSTITUTION: UNITED STATES.

for a popular vote [Initiativbegehren]. The demand for a popular vote may take the form either of a request in general terms, or of a definite draft. If such a demand be made in the form of a request in general terms and the Councils of the Federal Assembly agree thereto, the said Councils shall thereupon prepare a specific amendment of the purport indicated by those asking amendment; and such specific amendment shall be submitted to the people and to the states for their acceptance or rejection. In case the Councils of the Federal Assembly do not agree thereto, the question of specific amendment shall then be subjected to the people for a popular vote; and in case the majority of the Swiss voters vote therefor, an amendment of the purport indicated by the vote of the people shall then be prepared by the Federal Assembly. In case the request shall take the form of a specific draft and the Federal Assembly agree thereto, the draft is then to be submitted to the people and the States for acceptance or rejection. If the Federal Assembly shall not agree thereto it may either prepare a substitute draft for itself, or it may propose the rejection of the proposition. The proposition to reject such substitute draft or proposition shall be submitted to the vote of the people and of the States at the same time with the general Proposition of the People.

ART. 122. [*Amendment of July 5, 1891.*] The procedure upon the Proposition of the People and the popular votes concerning amendment of the Federal Constitution, shall be regulated in detail by a Federal Law.

ART. 123. [*Amendment of July 5, 1891.*] The amended Federal Constitution or the specific amendments proposed, as the case may be, shall be in force when adopted by the majority of the Swiss citizens who take part in the vote thereon and by a majority of the Cantons. In making up the majority of the States the vote of a half of each Canton is counted as half a vote. The result of the popular vote in each Canton is considered to be the vote of the state.

Temporary Provisions. ARTICLE 1. The proceeds of the posts and customs shall be divided upon the present basis, until such time as the Confederation shall take upon itself the military expenses up to this time borne by the Cantons. Federal legislation shall provide, besides, that the loss which may be occasioned to the finances of certain Cantons by the sum of the charges which result from Articles 20, 30, 36 (§ 2), and 42 (e), shall fall upon such Cantons only gradually, and shall not attain its full effect till after a transition period of some years. Those Cantons which, at the going into effect of Article 20 of the Constitution, have not fulfilled

the military obligations which are imposed upon them by the former Constitution, or by federal laws, shall be bound to carry them out at their own expense.

ART. 2. The provisions of the federal laws and of the cantonal concordats, constitutions or cantonal laws, which are contrary to this Constitution, cease to have effect by the adoption of the Constitution or the publication of the laws for which it provides.

ART. 3. The new provisions relating to the organization and jurisdiction of the Federal Court take effect only after the publication of federal laws thereon.

ART. 4. A delay of five years is allowed to Cantons for the establishment of free instruction in primary public education. (Art. 27.)

ART. 5. Those persons who practice a liberal profession, and who, before the publication of the federal law provided for in Article 33, have obtained a certificate of competence from a Canton or a joint authority representing several Cantons, may pursue that profession throughout the Confederation.

ART. 6. [*Amendment of Dec. 22, 1885. For the remainder of this amendment see article 32 (ii).*] If a federal law for carrying out Article 32 (ii) be passed before the end of 1890, the import duties levied on spirituous liquors by the Cantons and Communes, according to Article 32, cease on the going into effect of such law. If, in such case, the shares of any Canton or Commune, out of the sums to be divided, are not sufficient to equal the average annual net proceeds of the taxes they have levied on spirituous liquors in the years 1880 to 1884 inclusive, the Cantons and Communes affected shall, till the end of 1890, receive the amount of the deficiency out of the amount which is to be divided among the other Cantons according to population; and the remainder only shall be divided among such other Cantons and Communes, according to population. The Confederation shall further provide by law that for such Cantons or Communes as may suffer financial loss through the effect of this amendment, such loss shall not come upon them immediately in its full extent, but gradually up to the year 1895. The indemnities thereby made necessary shall be previously taken out of the net proceeds designated in Article 32 (ii), paragraph 4.

Thus resolved by the National Council to be submitted to the popular vote of the Swiss people and of the Cantons. Bern, January 31, 1874. Ziegler, President. Schiess, Secretary.

Thus resolved by the Council of States, to be submitted to the popular vote of the Swiss people and of the Cantons. Bern, January 31, 1874. A. Kopp, President. J.-L. Lutscher, Secretary.

CONSTITUTION OF THE UNITED STATES OF AMERICA.

A. D. 1781.—The Articles of Confederation. See UNITED STATES OF AM.: A. D. 1777-1781, and 1783-1787.

A. D. 1787-1789, and 1791-1870.—A sketch of the history of the framing and adoption of the Federal Constitution of the United States will be found under UNITED STATES OF AM.: A. D. 1787, and 1787-1789. The following text of the original instrument, with the subsequent amend-

ments to it, is one prepared by Professor Albert Bushnell Hart, and is the result of a careful comparison with the original manuscripts, preserved in the State Department at Washington. "It is intended to be absolutely exact in word, spelling, capitalization and punctuation. A few headings and paragraph numbers, inserted for convenience of reference, are indicated by brackets." "Those parts of the Constitution which were temporary in

their nature, or which have been superseded or altered by later amendments, are included within the signs [].” This text, originally printed in the “American History Leaflets,” is reproduced with Professor Hart’s consent. The paragraphing has been altered, to economize space, but it is otherwise exactly reproduced:

“WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

Article 1. *Section 1.* All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives. *Section 2* [§ 1.] The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.* [§ 2.] No Person shall be a Representative who shall not have attained to the Age of twenty-five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen. [§ 3.] Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, [which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.]† The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; [and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New-York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.]‡ [§ 4.] When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies. [§ 5.] The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment. *Section 3.* [§ 1.] The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote. [§ 2.] Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of

the sixth Year, so that one third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies. [§ 3.] No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen. [§ 4.] The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided. [§ 5.] The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States. [§ 6.] The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present. [§ 7.] Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law. *Section 4.* [§ 1.] The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators. [§ 2.] The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day. *Section 5.* [§ 1.] Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide. [§ 2.] Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the Concurrence of two thirds, expel a Member. [§ 3.] Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal. [§ 4.] Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting. *Section 6.* [§ 1.] The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same;

* Modified by Fourteenth Amendment.

† Superseded by Fourteenth Amendment.

‡ Temporary clause.

and for any Speech or Debate in either House, they shall not be questioned in any other Place. [§ 2.] No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office. *Section 7.* [§ 1.] All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills. [§ 2.] Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections, to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law. [§ 3.] Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill. *Section 8.* The Congress shall have Power [§ 1.] To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States; [§ 2.] To borrow Money on the credit of the United States; [§ 3.] To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes; [§ 4.] To establish a uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States; [§ 5.] To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures; [§ 6.] To provide for the Punishment of counterfeiting the Securities and current Coin of the United States; [§ 7.] To establish Post Offices and post Roads; [§ 8.] To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries; [§ 9.] To constitute Tribunals inferior to the supreme Court; [§ 10.] To define and punish Piracies and Felonies committed on the high Seas, and

Offences against the Law of Nations; [§ 11.] To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water; [§ 12.] To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years; [§ 13.] To provide and maintain a Navy; [§ 14.] To make Rules for the Government and Regulation of the land and naval Forces; [§ 15.] To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions; [§ 16.] To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress; [§ 17.] To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;— And [§ 18.] To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof. *Section 9.* [§ 1.] [The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.]* [§ 2.] The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it. [§ 3.] No Bill of Attainder or ex post facto Law shall be passed.† [§ 4.] No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken. [§ 5.] No Tax or Duty shall be laid on Articles exported from any State. [§ 6.] No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another. [§ 7.] No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time. [§ 8.] No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.‡ *Section 10.* [§ 1.] No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and

* Temporary provision.

† Extended by the first eight Amendments.

‡ Extended by Ninth and Tenth Amendments.

silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility. [§ 2.] No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress. [§ 3.] No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.*

Article II. *Section 1.* [§ 1.] The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows [§ 2.] Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector. [The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.]† [§ 3.] The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United

States. [§ 4.] No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States. [§ 5.] In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation, or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected. [§ 6.] The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them. [§ 7.] Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section 2. [§ 1.] The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment. [§ 2.] He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments. [§ 3.] The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session. *Section 3.* He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States. *Section 4.* The President,

*Extended by Thirteenth, Fourteenth and Fifteenth Amendments.

† Superseded by Twelfth Amendment.

Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Article III. *Section 1.* The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office. *Section 2.* [§ 1.] The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;*—between Citizens of different States,—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects. [§ 2.] In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make. [§ 3.] The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed. *Section 3.* [§ 1.] Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court. [§ 2.] The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attained.

Article IV. *Section 1.* Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof. *Section 2.* [§ 1.] The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States† [§ 2.] A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime. [§ 3.] [No Person held to Service

or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.]* *Section 3.* [§ 1.] New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress. [§ 2.] The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State. *Section 4.* The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

Article V. The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that [no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and]† that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

Article VI. [§ 1.] All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.‡ [§ 2.] This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding. [§ 3.] The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

Article VII. The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

* Superseded by Thirteenth Amendment.

† Temporary provision.

‡ Extended by Fourteenth Amendment, Section 4.

DONE in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth In Witness whereof We have hereunto subscribed our names.

ARTICLES in addition to and Amendment of the Constitution of the United States of America, proposed by Congress, and ratified by the Legislatures of the several States, pursuant to the fifth Article of the original Constitution.†

[Article I.] Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

[Article II.] A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

[Article III.] No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

[Article IV.] The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to

be searched, and the persons or things to be seized.

[Article V.] No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

[Article VI.] In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

[Article VII.] In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

[Article VIII.] Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

[Article IX.] The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

[Article X.] The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.*

[Article XI.] The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.†

[Article XII.] The Electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number

† Proclaimed to be in force Jan. 8, 1798.

CONSTITUTION: UNITED STATES.

be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.—The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.*

Article XIII. *Section 1.* Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. *Section 2.* Congress shall have power to enforce this article by appropriate legislation.†

Article XIV. *Section 1.* All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. *Section 2.* Representatives shall be apportioned among the several States

CONSTITUTION OF VENEZUELA.

according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State. *Section 3.* No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability. *Section 4.* The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void. *Section 5.* The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.*

Article XV. *Section 1.* The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.—*Section 2.* The Congress shall have power to enforce this article by appropriate legislation.”—†

CONSTITUTION OF VENEZUELA.

The following text is taken from Bulletin No. 84 of the Bureau of the American Republics:

Article 1. The States that the constitution of March 28, 1864, declared independent and united to form the Venezuelan Federation, and that on April 27, 1881, were denominated Apure, Bolivar, Barquisimeto, Barcelona, Carabobo, Cojedes, Cumaná, Falcón, Guzmán Blanco, Guárico, Guayana, Guzmán, Maturín, Nueva Esparta, Portuguesa, Táchira, Trujillo, Yaracuy, Zamora, and Zulia are constituted into nine grand political bodies, viz: The State of Bermúdez, composed of Barcelona, Cumaná, and Maturín; the State of Miranda, composed of Bolívar, Guzmán

Blanco, Guárico, and Nueva Esparta; the State of Carabobo, composed of Carabobo and Nirgua; the State of Zamora, composed of Cojedes, Portuguesa, and Zamora; the State of Lara, composed of Barquisimeto and Yaracuy, except the department of Nirgua; the State of Los Andes, composed of Guzmán, Trujillo, and Táchira; the State of Bolívar, composed of Guayana and Apure; the State of Zulia, and also the State of Falcón. And they are thus constituted to continue one only nation, free, sovereign, and independent, under the title of the United States of Venezuela.

* Proclaimed to be in force July 28, 1868. [See UNITED STATES OF AM.: A. D. 1865-1866 (DECEMBER-APRIL); 1866 (JUNE), and 1866-1867 (OCTOBER-MARCH).]

† Proclaimed to be in force Dec. 18, 1865. [See UNITED STATES OF AM.: A. D. 1865 (JANUARY).]

† Proclaimed to be in force Mar. 30, 1870. [See UNITED STATES OF AM.: A. D. 1869-1870.]

CONSTITUTION OF VENEZUELA.

Art. 2. The boundaries of these great States are determined by those that the law of April 28, 1856, that arranged the last territorial division, designated for the ancient provinces until it shall be re-formed.

Art. 3. The boundaries of the United States of the Venezuelan Federation are the same that in 1810 belonged to the old Captaincy-General of Venezuela.

Art. 4. The States that are grouped together to form the grand political bodies will be called Sections. These are equal among themselves; the constitutions prescribed for their internal organism must be harmonious with the federative principles established by the present compact, and the sovereignty not delegated resides in the State without any other limitations than those that devolve from the compromise of association.

Art. 5. These are Venezuelans, viz: 1st, All persons that may have been or may be born on Venezuelan soil, whatever may be the nationality of their parents; 2d, The children of a Venezuelan father or mother that may have been born on foreign soil, if they should come to take up their domicile in the country and express the desire to become citizens; 3d, Foreigners that may have obtained naturalization papers; and, 4th, Those born or that shall be born in any of the Spanish-American republics or in the Spanish Antilles, provided that they may have taken up their residence in the territory of the Republic and express a willingness to become citizens.

Art. 6. Those that take up their residence and acquire nationality in a foreign country do not lose the character of Venezuelans.

Art. 7. Males over twenty-one years of age are qualified Venezuelan citizens, with only the exceptions contained in this constitution.

Art. 8. All Venezuelans are obliged to serve the nation according to the prescriptions of the laws, sacrificing his property and his life, if necessary, to defend the country.

Art. 9. Venezuelans shall enjoy, in all the States of the Union, the rights and immunities inherent to their condition as citizens of the Federation, and they shall also have imposed upon them there the same duties that are required of those that are natives or domiciled there.

Art. 10. Foreigners shall enjoy the same civil rights as Venezuelans and the same security in their persons and property. They can only take advantage of diplomatic means in accordance with public treaties and in cases when right permits it.

Art. 11. The law will determine the right applicable to the condition of foreigners, according as they may be domiciled or in transit.

Art. 12. The States that form the Venezuelan Federation reciprocally recognize their respective autonomies; they are declared equal in political entity, and preserve, in all its plenitude, the sovereignty not expressly delegated in this constitution.

Art. 13. The States of the Venezuelan Federation oblige themselves—1st, To organize themselves in accord with the principles of popular, elective, federal, representative, alternative, and responsible government; 2d, To establish the fundamental regulations of their interior regulation and government in entire conformity with the principles of this constitution; 3d, To defend themselves against all violence that threatens the sectional independence or the integrity of the

CONSTITUTION OF VENEZUELA.

Venezuelan Federation; 4th, To not alienate to a foreign power any part of their territory, nor to implore its protection, nor to establish or cultivate political or diplomatic relations with other nations, since this last is reserved to the Federal power; 5th, To not combine or ally themselves with another nation, nor to separate themselves to the prejudice of the nationality of Venezuela and her territory; 6th, To cede to the nation the territory that may be necessary for the Federal district; 7th, To cede to the Government of the Federation the territory necessary for the erection of forts, warehouses, shipyards, and penitentiaries, and for the construction of other edifices indispensable to the general administration; 8th, To leave to the Government of the Federation the administration of the Amazonas and Goajira territories and that of the islands which pertain to the nation, until it may be convenient to elevate them to another rank; 9th, To reserve to the powers of the Federation all legislative or executive jurisdiction concerning maritime, coastwise, and fluvial navigation, and the national roads, considering as such those that exceed the limits of a State and lead to the frontiers of others and to the Federal district; 10th, To not subject to contributions the products or articles upon which national taxes are imposed, or those that are by law exempt from tax before they have been offered for consumption; 11th, To not impose contributions on cattle, effects, or any class of merchandise in transit for another State, in order that traffic may be absolutely free, and that in one section the consumption of others may not be taxed; 12th, To not prohibit the consumption of the products of other States nor to tax their productions with greater general or municipal taxes than those paid on products raised in the locality; 13th, To not establish maritime or territorial custom-houses for the collection of imports, since there will be national ones only; 14th, To recognise the right of each State to dispose of its natural products; 15th, To cede to the Government of the Federation the administration of mines, public lands, and salt mines, in order that the first may be regulated by a system of uniform working and that the latter may be applied to the benefit of the people; 16th, To respect the property, arsenals, and forts of the nation; 17th, To comply with and cause to be complied with and executed the Constitution and laws of the federation and the decrees and orders that the federal power, the tribunals, and courts may expedite in use of their attributes and legal faculties; 18th, To give entire faith to and to cause to be complied with and executed the public acts and judicial procedures of the other States; 19th, To organize their tribunals and courts for the administration of justice in the State and to have for all of them the same substantive civil and criminal legislation and the same laws of civil and criminal procedure; 20th, To present judges for the court of appeals and to submit to the decision of this supreme tribunal of the States; 21st, To incorporate the extradition of criminals as a political principle in their respective Constitutions; 22d, To establish direct and public suffrage in popular elections, making it obligatory and endorsing it in the electoral registry. The vote of the suffragist must be cast in full and public session of the respective board; it will be inscribed in the registry books that the

law prescribes for elections, which can not be substituted in any other form, and the elector, for himself or by another at his request in case of impediment or through ignorance, will sign the memorandum entry of his vote, and without this requisite it can not be claimed that in reality he has voted; 23d, To establish a system of primary education and that of arts and trades; 24th, To reserve to the powers of the Federation the laws and provisions necessary for the creation, conservation, and progress of general schools, colleges, or universities designed for the teaching of the sciences; 25th, To not impose duties upon the national employés, except in the quality of citizens of the State and inasmuch as these duties may not be incompatible with the national public service; 26th, To furnish the proportional contingent that pertains to them to compose the national public forces in time of peace or war; 27th, To not permit in the States of the Federation forced enlistments and levies that have or may have for their object an attack on liberty or independence or a disturbance of the public order of the Nation, of other States, or of another Nation; 28th, To preserve a strict neutrality in the contentions that may arise in other States; 29th, To not declare or carry on war in any case, one State with another; 30th, To defer and submit to the decision of the Congress or the High Federal Court in all the controversies that may arise between two or more States when they can not, between themselves and by pacific measures, arrive at an agreement. If, for any cause, they may not designate the arbiter to whose decision they may submit, they leave it, in fact, to the High Federal Court; 31st, To recognize the competency of Congress and of the court of appeals to take cognizance of the causes that, for treason to the country or for the infraction of the Constitution and laws of the Federation, may be instituted against those that exercise executive authority in the States, it being their duty to incorporate this precept in their constitutions. In these trials the modes of procedure that the general laws prescribe will be followed and they will be decided in consonance with those laws; 22d, To have as the just income of the States, two-thirds of the total product of the impost collected as transit tax in all the custom-houses of the Republic and two-thirds of that collected from mines, public lands, and salt mines administered by the Federal Power and to distribute this income among all the States of the Federation in proportion to the population of each; 33d, To reserve to the Federal Power the amount of the third part of the income from transit tax, the production of mines, public lands, and salt mines, to be invested in the improvement of the country; 34th, To keep far away from the frontier those individuals that, through political motives, take refuge in a State, provided that the State interested requests it.

Art. 14. The nation guarantees to Venezuelans: 1st, The inviolability of life, capital punishment being abolished in spite of any law that establishes it; 2d, Property, [with all its attributes, rights and privileges, will only be subjected to contributions decreed by legislative authority, to judicial decision, and to be taken for public works after indemnity and condemnation; 3d, The inviolability and secrecy of correspondence and other private papers; 4th, The domestic hearth, that can not be approached ex-

cept to prevent the perpetration of crime, and this itself must be done in accordance with law; 5th, Personal liberty, and consequently (1) forced recruiting for armed service is abolished, (2) slavery is forever proscribed, (3) slaves that tread the soil of Venezuela are free, and (4) nobody is obliged to do that which the law does not command, nor is impeded from doing that which it does not prohibit; 6th, The freedom of thought, expressed by word or through the press, is without any restriction to be submitted to previous censure. In cases of calumny or injury or prejudice to a third party, the aggrieved party shall have every facility to have his complaints investigated before competent tribunals of justice in accordance with the common laws; 7th, The liberty of traveling without passport, to change the domicile, observing the legal formalities, and to depart from and return to the Republic, carrying off and bringing back his or her property; 8th, The liberty of industry and consequently the proprietorship of discoveries and productions. The law will assign to the proprietors a temporary privilege or the mode of indemnity in case that the author agrees to its publication; 9th, The liberty of reunion and assembling without arms, publicly or privately, the authorities being prohibited from exercising any act of inspection or coercion; 10th, The liberty of petition, with the right of obtaining action by resolution; petition can be made by any functionary, authority or corporation. If the petition shall be made in the name of various persons, the first five will respond for the authenticity of the signatures and all for the truth of the assertions; 11th, The liberty of suffrage at popular elections without any restriction except to males under eighteen years of age; 12th, The liberty of instruction will be protected to every extent. The public power is obliged to establish gratuitous instruction in primary schools, the arts, and trades; 13th, Religious liberty; 14th, Individual security, and, therefore (1) no Venezuelan can be imprisoned or arrested in punishment for debts not founded in fraud or crime; (2) nor to be obliged to lodge or quarter soldiers in his house; (3) nor to be judged by special commissions or tribunals, but by his natural judges and by virtue of laws dictated before the commission of the crime or act to be judged; (4) nor to be imprisoned nor arrested without previous summary information that a crime meriting corporal punishment has been committed, and a written order from the functionary that orders the imprisonment, stating the cause of arrest, unless the person may be caught in the commission of the crime; (5) nor to be placed in solitary confinement for any cause; (6) nor to be obliged to give evidence, in criminal causes, against himself or his blood relations within the fourth degree of consanguinity or against his relations by marriage within the second degree, or against husband or wife; (7) nor to remain in prison when the reasons that caused the imprisonment have been dissipated; (8) nor to be sentenced to corporal punishment for more than ten years; (9) nor to remain deprived of his liberty for political reasons when order is reestablished.

Art. 15. Equality: in virtue of which (1) all must be judged by the very same laws and subject to equal duty, service and contributions; (2) no titles of nobility, hereditary honors, and distinctions will be conceded, nor employments

CONSTITUTION OF VENEZUELA.

or offices the salaries or emoluments of which continue after the termination of service; (3) no other official salutation than "citizen" and "you" will be given to employés and corporations. The present enumeration does not impose upon the States the obligation to accord other guarantees to their inhabitants.

Art. 16. The laws in the States will prescribe penalties for the infractions of these guarantees, establishing modes of procedure to make them effective.

Art. 17. Those who may issue, sign, or execute, or order executed any decrees, orders, or resolutions that violate or in any manner infringe upon the guarantees accorded to Venezuelans are culpable and must be punished according to the law. Every citizen is empowered to bring charges.

Art. 18. The National Legislature will be composed of two chambers, one of Senators and another of Deputies.

Art. 19. The States will determine the mode of election of Deputies.

Art. 20. To form the Chamber of Deputies, each State will name, by popular election in accordance with paragraph 22 of Article 13 of this Constitution, one Deputy for each thirty-five thousand inhabitants and another for an excess not under fifteen thousand. In the same manner it will elect alternates in equal number to the principals.

Art. 21. The Deputies will hold office for four years, when they will be renewed in their entirety.

Art. 22. The prerogatives of the chamber of Deputies are: First, to examine the annual account that the President of the United States of Venezuela must render; second, to pass a vote of censure of the Ministers of the Cabinet, in which event their posts will be vacant; third, to hear charges against the persons in charge of the office of the National Executive for treason to the country, for infraction of the constitution, or for ordinary crimes; against the ministers and other National employés for infraction of the Constitution and laws and for fault in the discharge of their duties according to article 75 of this constitution and of the general laws of the Republic. This attribute is preventative and neither contracts nor diminishes those that other authorities have to judge and punish.

Art. 23. When a charge is instituted by a Deputy or by any corporation or individual the following rules will be observed: (1) there will be appointed, in secret session, a commission of three deputies; (2) the commission will, within three days, render an opinion, declaring whether or not there is foundation for instituting a cause; (3) the Chamber will consider the information and decide upon the cause by the vote of an absolute majority of the members present, the accusing Deputy abstaining from voting.

Art. 24. The declaration that there is foundation for the cause operates to suspend from office the accused and incapacitates him for the discharge of any public function during the trial.

Art. 25. To form this Chamber each State, through its respective legislature, will elect three principal Senators and an equal number of alternates to supply the vacancies that may occur.

Art. 26. To be a Senator it is required that he shall be a Venezuelan by birth and thirty years of age.

CONSTITUTION OF VENEZUELA.

Art. 27. The Senators will occupy their posts for four years and be renewed in their entirety.

Art. 28. It is the prerogative of the Senate to substantiate and decide the causes initiated in the Chamber of Deputies.

Art. 29. If the cause may not have been concluded during the sessions, the Senate will continue assembled for this purpose only until the cause is finished.

Art. 30. The National Legislature will assemble on the 20th day of February of each year or as soon thereafter as possible at the capital of the United States without the necessity of previous notice. The sessions will last for seventy days to be prolonged until ninety days at the judgment of the majority.

Art. 31. The Chambers will open their sessions with two-thirds of their number at least; and, in default of this number, those present will assemble in preparatory commission and adopt measures for the concurrence of the absentees.

Art. 32. The sessions having been opened, they may be continued by two-thirds of those that may have installed them, provided that the number be not less than half of all the members elected.

Art. 33. Although the Chambers deliberate separately, they may assemble together in the Congress when the constitution and laws provide for it or when one of the two Chambers may deem it necessary. If the Chamber that is invited shall agree, it remains to it to fix the day and the hour of the joint session.

Art. 34. The sessions will be public and secret at the will of the Chamber.

Art. 35. The Chambers have the right: (1) to make rules to be observed in the sessions and to regulate the debates; (2) to correct infractors; (3) to establish the police force in the hall of sessions; (4) to punish or correct spectators who create disorder; (5) to remove the obstacles to the free exercise of their functions; (6) to command the execution of their private resolutions; (7) to judge of the qualifications of their members and to consider their resignations.

Art. 36. One of the Chambers cannot suspend its sessions nor change its place of meeting without the consent of the other; in case of disagreement they will reassemble together and execute that which the majority resolves.

Art. 37. The exercise of any other public function, during the sessions, is incompatible with those of a Senator or Deputy. The law will specify the remunerations that the members of the national Legislature shall receive for their services. And whenever an increase of said remunerations is decreed, the law that sanctions it will not begin to be in force until the following period when the Chambers that sanctioned it shall have been renewed in their entirety.

Art. 38. The Senators and Deputies shall enjoy immunity from the 20th day of January of each year until thirty days after the close of the sessions and this consists in the suspension of all civil or criminal proceeding, whatever may be its origin or nature; when any one shall perpetrate an act that merits corporal punishment the investigation shall continue until the end of the summing up and shall remain in this state while the term of immunity continues.

Art. 39. The Congress will be presided over by the President of the Senate and the presiding

officer of the Chamber of Deputies will act as Vice-President.

Art. 40. The members of the Chambers are not responsible for the opinions they express or the discourses they pronounce in session.

Art. 41. Senators and deputies that accept office or commission from the National Executive thereby leave vacant the posts of legislators in the Chambers to which they were elected.

Art. 42. Nor can senators and deputies make contracts with the general Government or conduct the prosecution of claims of others against it.

Art. 43. The National Legislature has the following prerogatives: (1) to dissolve the controversies that may arise between two or more States; (2) to locate the Federal District in an unpopulated territory not exceeding three miles square, where will be constructed the capital city of the Republic. This district will be neutral territory, and no other elections will be there held than those that the law determines for the locality. The district will be provisionally that which the constituent assembly designated or that which the National Legislature may designate; (3) to organize everything relating to the custom-houses, whose income will constitute the treasure of the Union until these incomes are supplied from other sources; (4) to dispose in everything relating to the habitation and security of ports and seacoasts; (5) to create and organize the postal service and to fix the charges for transportation of correspondence; (6) to form the National Codes in accordance with paragraph 19, article 13 of this Constitution; (7) to fix the value, type law, weight, and coinage of national money, and to regulate the admission and circulation of foreign money; (8) to designate the coat-of-arms and the national flag which will be the same for all the States; (9) to create, abolish, and fix salaries for national offices; (10) to determine everything in relation to the national debt; (11) to contract loans upon the credit of the nation; (12) to dictate necessary measures to perfect the census of the current population and the national statistics; (13) to annually fix the armed forces by sea and land and to dictate the army regulations; (14) to decree rules for the formation and substitution of the forces referred to in the preceding clause; (15) to declare war and to require the National Executive to negotiate peace; (16) to ratify or reject the contracts for national public works made by the President with the approval of the Federal Council, without which requisite they will not be carried into effect; (18) to annually fix the estimates for public expenses; (19) to promote whatever conduces to the prosperity of the country and to its advancement in the general knowledge of the arts and sciences; (20) to fix and regulate the national weights and measures; (21) to grant amnesties; (22) to establish, under the names of territories, special regulations for the government of regions inhabited by unconquered and uncivilized Indians. Such territories will be under the immediate supervision of the Executive of the Union; (23) to establish the modes of procedure and to designate the penalties to be imposed by the Senate in the trials originated in the Chamber of Deputies; (24) to increase the basis of population for the election of deputies; (25) to permit or refuse the admission of foreigners into the service of the Republic; (26) to make laws in respect to retirements from the military service and army

pensions; (27) to dictate the law of responsibility on the part of all national employés and those of the States for infraction of the constitution and the general laws of the Union; (28) to determine the mode of conceding military rank or promotion; (29) to elect the Federal Council provided for in this constitution and to convoke the alternates of the senators and deputies who may have been chosen for it.

Art. 44. Besides the preceding enumeration the National Legislature may pass such laws of general character as may be necessary, but in no case can they be promulgated, much less executed, if they conflict with this constitution, which defines the prerogatives of the public powers in Venezuela.

Art. 45. The laws and decrees of the National Legislature may be proposed by the members of either chamber, provided that the respective projects are conformed to the rules established for the Parliament of Venezuela.

Art. 46. After a project may have been presented, it will be read and considered in order to be admitted; and if it is, it must undergo three discussions, with an interval of at least one day between each, observing the rules established for debate.

Art. 47. The projects approved in the chamber in which they were originated will be passed to the other for the purposes indicated in the preceding article, and if they are not rejected they will be returned to the chamber whence they originated, with the amendments they may have undergone.

Art. 48. If the chamber of their origin does not agree to the amendments, it may insist and send its written reasons to the other. They may also assemble together in Congress and deliberate, in general commission, over the mode of agreement, but if this can not be reached, the project will be of no effect after the chamber of its origin separately decides upon the ratification of its insistence.

Art. 49. Upon the passing of the projects from one to the other chamber, the days on which they have been discussed will be stated.

Art. 50. The law reforming another law must be fully engrossed and the former law, in all its parts, will be annulled.

Art. 51. In the laws this form will be used: "The Congress of the United States of Venezuela decrees."

Art. 52. The projects defeated in one legislature cannot be reintroduced except in another.

Art. 53. The projects pending in a chamber at the close of the sessions must undergo the same three discussions in succeeding legislatures.

Art. 54. Laws are annulled with the same formalities established for their sanction.

Art. 55. When the ministers of Cabinet may have sustained, in a chamber, the unconstitutionality of a project by word or in writing, and, notwithstanding this, it may have been sanctioned as law, the National Executive, with the affirmative vote of the Federal Council, will suspend its execution and apply to the legislatures of the States, asking their vote in the matter.

Art. 56. In case of the foregoing article, each State will represent one vote expressed by the majority of the members of the legislature present, and the result will be sent to the High Federal Court in this form: "I confirm" or "I reject."

Art. 57. If a majority of the legislatures of the States agree with the Federal Executive, the High Federal Court will confirm the suspension, and the Federal Executive himself will render an account to the next Congress relative to all that has been done in the matter.

Art. 58. The laws will not be observed until after being published in the solemn form established.

Art. 59. The faculty conceded to sanction a law is not to be delegated.

Art. 60. No legislative disposition will have a retroactive effect, except in matters of judicial procedure and that which imposes a lighter penalty.

Art. 61. There will be a Federal Council composed of one senator and one deputy for each State and of one more deputy for the Federal District, who will be elected by the Congress each two years from among the respective representations of the States composing the Federation and from that of the Federal District. This election will take place in the first fifteen days of the meeting of Congress, in the first and third year of the constitutional period.

Art. 62. The Federal Council elects from its members the President of the United States of Venezuela, and in the same manner the person who shall act in his stead in case of his temporal or permanent disability during his term. The election of a person to be President of the United States of Venezuela who is not a member of the Federal Council, as well as of those who may have to act in his stead in case of his temporal or permanent disability, is null of right and void of efficacy.

Art. 63. The members of the Federal Council hold office for two years, the same as the President of the United States of Venezuela, whose term is of equal duration; and neither he nor they can be reelected for the term immediately succeeding, although they may return to occupy their posts as legislators in the chambers to which they belong.

Art. 64. The Federal Council resides in the district and exercises the functions prescribed in this constitution. It cannot deliberate with less than an absolute majority of all its members; it dictates the interior regulations to be observed in its deliberations, and annually appoints the person who shall preside over its sessions.

Art. 65. The prerogatives of the President of Venezuela are: (1) To appoint and remove the cabinet ministers; (2) to preside over the cabinet, in whose discussions he will have a vote, and to inform the Council of all the matters that refer to the General Administration; (3) to receive and welcome public ministers; (4) to sign the official letters to the Sovereigns or Presidents of other countries; (5) to order the execution of the laws and decrees of the National Legislature, and to take care that they are complied with and executed; (6) to promulgate the resolutions and decrees that may have been proposed and received the approbation of the Federal Council, in conformity with article 66 of this constitution; (7) to organize the Federal District and to act therein as the chief civil and political authority established by this constitution; (8) to issue registers of navigation to national vessels; (9) to render an account to Congress, within the first eight days of its annual session, of the cases in which, with the approval of the Federal Council, he may have exercised all or any of the faculties accorded

to him in article 66 of this compact; (10) to discharge the other functions that the national laws entrust to him.

Art. 66. Besides the foregoing prerogatives, that are personal to the president of the United States of Venezuela, he can, with the deliberate vote of the Federal Council, exercise the following: (1) To protect the Nation from all exterior attack; (2) to administer the public lands, mines, and salt mines of the States as their delegate; (3) to convoke the National Legislature in its regular sessions, and in extraordinary session when the gravity of any subject demands it; (4) to nominate persons for diplomatic positions, consuls-general, and consuls; those named for the first and second positions must be Venezuelans by birth; (5) to direct negotiations and celebrate all kinds of treaties with other nations, submitting these to the National Legislature; (6) to celebrate contracts of national interest in accordance with the laws and to submit them the legislatures for their approval; (7) to nominate the employés of hacienda, which nominations are not to be made by any other authority. It is required that these employés shall be Venezuelan by birth; (8) to remove and suspend employés of his own free motion, ordering them to be tried if there should be cause for it; (9) to declare war in the name of the Republic when Congress shall have decreed it; (10) in the case of foreign war he can, first, demand from the States the assistance necessary for the national defense; second, require, in anticipation, the contributions and negotiate the loans decreed by the National Legislature; third, arrest or expel persons who pertain to the nation with which war is carried on and who may be opposed to the defense of the country; fourth, to suspend the guaranties that may be incompatible with the defense of the country, except that of life; fifth, to select the place to which the General Power of the Federation may be provisionally translated when there may be grave reasons for it; sixth, to bring to trial for treason to the country those Venezuelans who may be, in any manner, hostile to the national defense; seventh, to issue registers to corsairs and privateers and to prescribe the laws that they must observe in cases of capture; (11) to employ the public force and the powers contained in numbers 1, 2, and 5 of the preceding clause with the object of reestablishing constitutional order in case of armed insurrection against the institutions of the Nation; (12) to dispose of the public force for the purpose of quelling every armed collision between two or more States, requiring them to lay down their arms and submit their controversies to the arbitration to which they are pledged by number 30, article 14 of this constitution; (13) to direct the war and to appoint the person who shall command the army; (14) to organize the national force in time of peace; (15) to concede general or particular exemptions; (16) to defend the territory designated for the Federal District when there may be reasons to apprehend that it will be invaded by hostile forces.

Art. 67. The President of the United States of Venezuela shall have the ministers for his cabinet that the law designates. It will determine their functions and duties and will organize their bureaus.

Art. 68. To be a minister of the cabinet it is required that the person shall be twenty-five

years of age, a Venezuelan by birth or five years of naturalization.

Art. 69. The ministers are the natural and proper organs of the President of the United States of Venezuela. All his acts must be subscribed by them and without such requisite they will not be complied with nor executed by the authorities, employees, or private persons.

Art. 70. All the acts of the ministers must be conformed to this Constitution and the laws; their personal responsibility is not saved, although they may have the written order of the President.

Art. 71. The settlement of all business, except the fiscal affairs of the bureaus, will be determined in the council of ministers, and their responsibility is collective and consolidated.

Art. 72. The ministers, within the five first sessions of each year, will render an account to the Chambers of what they may have done or propose to do in their respective branches. They will also render written or verbal reports that may be requested of them, reserving only that which, in diplomatic affairs, it may not be convenient to publish.

Art. 73. Within the same period, they will present to the National Legislature the estimates of public expenditures and the general account of the past year.

Art. 74. The ministers have the right to be heard in the Chambers, and are obliged to attend when they may be called upon for information.

Art. 75. The ministers are responsible: (1) for treason to the country; (2) for infraction of this Constitution or the laws; (3) for malversation of the public funds; (4) for exceeding the estimates in their expenditures; (5) for subornation or bribery in the affairs under their charge or in the nominations for public employees; (6) for failure in compliance with the decisions of the Federal Council.

Art. 76. The High Federal Court will be composed of as many judges as there may be States of the Federation and with the following qualities: (1) A judge must be a Venezuelan by birth; (2) he must be thirty years of age.

Art. 77. For the nomination of judges of the High Federal Court the Congress will convene on the fifteenth day of its regular sessions and will proceed to group together the representation of each State from which to form a list of as many candidates for principal judges and an equal number of alternates as there may be States of the Federation. The Congress, in the same or following session, will elect one principal and one alternate for each State, selecting them from the respective lists.

Art. 78. The law will determine the different functions of the judges and other officers of the High Federal Court.

Art. 79. The judges and their respective alternates will hold office for four years. The principals and their alternates in office can not accept during this period any office in the gift of the executive without previous resignation and lawful acceptance. The infraction of this disposition will be punished with four years of disability to hold public office in Venezuela.

Art. 80. The matters within the competence of the High Federal Court are: (1) to take cognizance of civil or criminal causes that may be instituted against diplomatic officers in those cases permitted by the law of nations; (2) to take cognizance of causes ordered by the President to be

instituted against cabinet ministers when they may be accused according to the cases provided for in this Constitution. In the matter of the necessity of suspension from office, they will request the President to that effect and he will comply; (4) to have jurisdiction of the causes of responsibility instituted against diplomatic agents accredited to another nation for the wrong discharge of their functions; (5) to have jurisdiction in civil trials when the nation is defendant and the law sanctions it; (6) to dissipate the controversies that may arise between the officials of different States in political order in the matter of jurisdiction or competence; (7) to take cognizance of all matters of political nature that the States desire to submit for their consideration; (8) to declare which may be the law in force when the national and State laws may be found to conflict with each other; (9) to have jurisdiction in the controversies that may result from contracts or negotiations celebrated by the president of the federation; (10) to have jurisdiction in causes of imprisonment; (11) to exercise other prerogatives provided for by law.

Art. 81. The Court of Appeals referred to in paragraph 20, article 13 of this Constitution, is the tribunal of the states; it will be composed of as many judges as there are states of the federation, and their terms of office will last for four years.

Art. 82. A judge of the Court of Appeals must have the following qualifications: (1) he must be an attorney at law in the exercise of his profession, and must have had at least six years practice; (2) he must be a Venezuelan, thirty years of age.

Art. 83. Every four years the legislature of each State will form a list of as many attorneys, with the qualifications expressed in the preceding article, as there are States, and will remit it, duly certified, to the Federal Council in order that this body, from the respective lists, may select a judge for each State in the organization of this high tribunal.

Art. 84. After the Federal Council may have received the lists from all the States, it will proceed, in public session, to verify the election; forming thereafter a list of the attorneys not elected, in order that from this general list, which will be published in the official paper, the permanent vacancies that may occur in the Court of Appeals may be filled by lot. The temporary vacancies will be filled according to law.

Art. 85. The Court of Appeals will have the following prerogatives: (1) to take cognizance of criminal causes or those of responsibility that may be instituted against the high functionaries of the different States, applying the laws of the States themselves in matters of responsibility, and in case of omission of the promulgation of a law of constitutional precept, it will apply to the cause in question the general laws of the land; (2) to take cognizance and to decide in cases of appeal in the form and terms directed by law; (3) to annually report to the National Legislature the difficulties that stand in the way of uniformity in the matter of civil or criminal legislation; (4) to dispose of the rivalries that may arise between the officers or functionaries of judicial order in the different States of the federation and amongst those of a single State, provided that the authority to settle them does not exist in the State.

Art. 86. The National Executive is exercised by the Federal Council, the President of the United States of Venezuela, or the person who fills his vacancies, in union with the cabinet ministers who are his organs. The President of Venezuela must be a Venezuelan by birth.

Art. 87. The functions of National Executive can not be exercised outside of the federal district except in the case provided for in number 5, paragraph 10, article 66 of the Constitution. When the President, with the approval of the Council, shall take command of the army or absent himself from the district on account of matters of public interest that demand it, he can not exercise any functions and will be replaced by the Federal Council in accordance with article 62 of this Constitution.

Art. 88. Everything that may not be expressly assigned to the general administration of the nation in this Constitution is reserved to the States.

Art. 89. The tribunals of justice in the States are independent; the causes originated in them will be concluded in the same States without any other review than that of the Court of Appeals in the cases provided for by law.

Art. 90. Every act of Congress and of the National Executive that violates the rights guaranteed to the States in this Constitution, or that attacks their independence, must be declared of no effect by the High Court, provided that a majority of the legislatures demands it.

Art. 91. The public national force is divided into naval and land troops, and will be composed of the citizen militia that the States may organize according to law.

Art. 92. The force at the disposal of the federation will be organized from citizens of a contingent furnished by each State in proportion to its population, calling to service those citizens that should render it according to their internal laws.

Art. 93. In case of war the contingent can be augmented by bodies of citizen militia up to the number of men necessary to fill the draft of the National Government.

Art. 94. The National Government may change the commanders of the public force supplied by the States in the cases and with the formalities provided for in the national military law and then their successors will be called for from the States.

Art. 95. The military and civil authority can never be exercised by the same person or corporation.

Art. 96. The nation, being in possession of the right of ecclesiastical patronage, will exercise it as the law upon the subject may direct.

Art. 97. The Government of the Federation will have no other resident employees with jurisdiction or authority in the States than those of the States themselves. The officers of hacienda, those of the forces that garrison national fortresses, arsenals created by law, navy-yards, and habilitated ports, that only have jurisdiction in matters peculiar to their respective offices and within the limits of the forts and quarters that they command, are excepted; but even these must be subject to the general laws of the State in which they reside. All the elements of war now existing belong to the National Government; nevertheless it is not to be understood that the States are prohibited from acquiring those that they may need for domestic defense.

Art. 98. The National Government can not station troops nor military officers with command

in a State, although they may be from that or another State, without permission of the government of the State in which the force is to be stationed.

Art. 99. Neither the National Executive nor those of the States can resort to armed intervention in the domestic contentions of a State; it is only permitted to them to tender their good offices to bring about a pacific solution in the case.

Art. 100. In case of a permanent or temporary vacancy in the office of President of the United States of Venezuela, the States will be immediately informed as to who has supplied the vacancy.

Art. 101. Exportation in Venezuela is free and no duty can be placed upon it.

Art. 102. All usurped authority is without effect and its acts are null. Every order granted for a requisition, direct or indirect, by armed force or by an assemblage of people in subversive attitude is null of right and void of efficacy.

Art. 103. The exercise of any function not conferred by the constitution or laws is prohibited to every corporation or authority.

Art. 104. Any citizen may accuse the employees of the nation or the States before the chamber of deputies, before their respective superiors in office, or before the authorities designated by law.

Art. 105. No payment shall be made from the National Treasury for which Congress has not expressly provided in the annual estimate, and those that may infringe this rule will be civilly responsible to the National Treasury for the sums they have paid out. In every payment from the public Treasury the ordinary expenses will be preferred to the extraordinary charges.

Art. 106. The offices of collection and disbursement of the national taxes shall be always separate, and the officers of collection may disburse only the salaries of their respective employees.

Art. 107. When, for any reason, the estimate of appropriations for a fiscal period have not been made, that of the immediately preceding period will continue in force.

Art. 108. In time of elections, the public national force or that of the States themselves will remain closely quartered during the holding of popular elections.

Art. 109. In international treaties of commerce and friendship this clause will be inserted, to wit: "all the disagreements between the contracting parties must be decided without an appeal to war, by the decision of a power or friendly powers."

Art. 110. No individual can hold more than one office within the gift of Congress and the National Executive. The acceptance of any other is equivalent to resignation of the first. Officials that are removable will cease to hold office upon accepting the charge of a Senator or Deputy when they are dependents of the National Executive.

Art. 111. The law will create and designate other national tribunals that may be necessary.

Art. 112. National officers can not accept gifts, commissions, honors, or emoluments from a foreign nation without permission from the National Legislature.

Art. 113. Armed force can not deliberate; it is passive and obedient. No armed body can make requisitions nor demand assistance of any kind, but from the civil authorities, and in the mode and form prescribed by law.

Art. 114. The Nation and the States will promote foreign immigration and colonization in accordance with their respective laws.

Art. 115. A law will regulate the manner in which national officers, upon taking charge of their posts, shall take the oath to comply with their duties.

Art. 116. The National Executive will negotiate with the Governments of America over treaties of alliance or confederation.

Art. 117. The law of Nations forms a part of the National Legislation; its dispositions will be specially in force in cases of civil war, which can be terminated by treaties between the belligerents who will have to respect the humanitarian customs of Christians and civilized nations, the guarantee of life being, in every case, inviolable.

Art. 118. This constitution can be reformed by the National Legislature if the legislatures of the States desire it, but there shall never be any reform except in the parts upon which the majority of the States coincide; also a reform can be made upon one or more points when two-thirds of the members of the National Legislature, deliberating separately and by the proceedings established to sanction the laws, shall accord it; but, in this second case, the amendment voted shall be submitted to the legislatures of the States, and it will stand sanctioned in the point or points that may have been ratified by them.

CONSTITUTION OF THE WATAUGA ASSOCIATION (the first Western American Commonwealth). See *TENNESSEE*: A. D. 1769-1772.

CONSTITUTIONS OF CLARENDON.—The "Constitutions of Clarendon" were a series of declarations drawn up by a council which King Henry II. of England convened at Clarendon, near Winchester, in 1164, and which were intended to determine the law on various points in dispute between the Crown and the laity, on one side, and the Church on the other. The issues in question were those which brought Henry into collision with Thomas Becket, Archbishop of Canterbury. The general provisions embodied in the Constitutions of Clarendon "would now be scarcely challenged in the most Catholic country in the world. 1. During the vacancy of any archbishopric, bishopric, abbey, or priory of royal foundation, the estates were to be in the custody of the Crown. Elections to these preferments were to be held in the royal chapel, with the assent of the king and council. 2. In every suit to which a clerk was a party, proceedings were to commence before the king's justices, and these justices were to decide whether the case was to be tried before a spiritual or a civil court. If it was referred to a spiritual court, a civil officer was to attend to watch the trial, and if a clerk was found guilty of felony the Church was to cease to protect him. 3. No tenant-in-chief of the king, or officer of his household, was to be excommunicated, or his lands laid under an interdict, until application had been first made to the king, or, in his absence, to the chief justice. 4. Laymen were not to be indicted in a bishop's court, either for perjury or other similar offence, except in the bishop's presence by a lawful prosecutor and with lawful witnesses. If the accused was of so high rank that no prosecutor would appear, the bishop might require the sheriff to call a jury to inquire into the case. 5. Archbishops, bishops, and other

Art. 119. This constitution will take effect from the day of its official promulgation in each State, and in all public acts and official documents there will be cited the date of the Federation to begin with February 20, 1859, and the date of the law to begin with March 28, 1864.

Art. 120. The constitutional period for the offices of the General Administration of the Republic will continue to be computed from February 20, 1882, the date on which the reformed constitution took effect.

Art. 121. For every act of civil and political life of the States of the Federation, its basis of population is that which is determined in the last census approved by the National Legislature.

Art. 122. The Federal Constitution of April 27, 1881, is repealed. Done in Caracas, in the Palace of the Federal Legislative Corps, and sealed with the seal of Congress on the 9th day of April, 1891. The 28th year of the Law and the 33rd year of the Federation.

(Here follow the signatures of the Presidents, Vice-Presidents, and Second Vice-Presidents of the Senate and Chamber of Deputies, together with those of the Senators and Deputies of the various States, followed by those of the President and the ministers of his cabinet.) See *VENEZUELA*: A. D. 1869-1892.

great persons were forbidden to leave the realm without the king's permission. 6. Appeals were to be from the archdeacon to the bishop, from the bishop to the archbishop, from the archbishop to the king, and no further; that, by the king's mandate, the case might be ended in the archbishop's court. The last article the king afterwards explained away. It was one of the most essential, but he was unable to maintain it; and he was rash, or he was ill-advised, in raising a second question, on which the pope would naturally be sensitive, before he had disposed of the first."—J. A. Froude, *Life and Times of Becket*, pp. 31-32.—See *ENGLAND*: A. D. 1162-1170.

CONSTITUTIONS, Roman Imperial. See *CORPUS JURIS CIVILIS*.

CONSTITUTIONAL UNION PARTY, The. See *UNITED STATES OF AM.*: A. D. 1860 (APRIL—NOVEMBER).

CONSUL, Roman.—When the Romans had rid themselves of their kings and established a republic, or, rather, an aristocratic government, "the civil duties of the king were given to two magistrates, chosen for a year, who were at first called 'prætores' or generals, 'judices' or judges, or consuls (cf. con 'together' and salio 'to leap') or 'colleagues.' In the matter of their power, no violent departure was made from the imperium of the king. The greatest limitation on the consuls was the short period for which they were at the head of the state; but even here they were thought of, by a fiction, as voluntarily abdicating at the expiration of their term, and as nominating their successors, although they were required to nominate the men who had already been selected in the 'comitia centuriata.' Another limitation was the result of the dual character of the magistracy. The imperium was not divided between the consuls, but each possessed it in full, as the king had before. When, therefore, they did not agree, the veto of the one prevailed over the proposal of the other, and there was no

action."—A. Tighe, *Development of the Roman Const.*, ch. 4.—"As judges, the consuls occupied altogether the place of the kings. They decided the legal disputes of the citizens either personally or by deputy. Their criminal jurisdiction was probably limited to the most important cases. . . . In the warlike state of the Romans the military character of the consuls was no doubt most prominent and most important. When the consul led the army into the field he possessed the unlimited military power of the kings (the imperium). He was entrusted with the direction of the war, the distribution of the booty, and the first disposal of the conquered land. . . . The oldest designation for the consuls, therefore, was derived from their military quality, for they were called prætors, that is, commanders. It was, however, precisely in war that the division of power among two colleagues must often have proved prejudicial . . . and the necessity of unity in the direction of affairs was felt to be indispensable. The dictatorship served this purpose. By decree of the senate one of the consuls could be charged with naming a dictator for six months, and in this officer the full power of the king was revived for a limited period. The dictatorship was a formal suspension of the constitution of the republic. . . . Military was substituted for common law, and Rome, during the time of the dictatorship, was in a state of siege."—W. Ihne, *Hist. of Rome*, bk. 2, ch. 1, and bk. 6, ch. 3-5.—In the later years of the Roman empire, "two consuls were created by the sovereigns of Rome and Constantinople for the sole purpose of giving a date to the year and a festival to the people. But the expenses of this festival, in which the wealthy and the vain aspired to surpass their predecessors, insensibly arose to the enormous sum of four score thousand pounds; the wisest senators declined a useless honour which involved the certain ruin of their families, and to this reluctance I should impute the frequent chasms in the last age of the consular Fasti. . . . The succession of consuls finally ceased in the thirteenth year of Justinian [A. D. 541] whose despotic temper might be gratified by the final extinction of a title which admonished the Romans of their ancient freedom. Yet the annual consulship still lived in the minds of the people; they fondly expected its speedy restoration . . . and three centuries elapsed after the death of Justinian before that obsolete dignity, which had been suppressed by custom, could be abolished by law. The imperfect mode of distinguishing each year by the name of a magistrate was usefully supplied by the date of a permanent era."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 40.—"There were no consuls in 531 and 532. The Emperor held the office alone in 533, and with a colleague in 534. Belisarius was sole consul in 535. The two following years, having no consuls of their own, were styled the First and Second after the Consulship of Belisarius. John of Cappadocia gave his name to the year 538, and the years 539 and 540 had again consuls, though one only for each year. In 541 Albinus Basilus sat in the curule chair, and he was practically the last of the long list of warriors, orators, demagogues, courtiers, which began (in the year 509 B. C.) with the names of Lucius Junius Brutus and Lucius Tarquinius Collatinus. All the rest of the years of Justinian, twenty-four in number, were reckoned as Post Consulatum

Basilii."—T. Hodgkin, *Italy and Her Invaders*, bk. 5, ch. 14.—See, also, *ROME*: B. C. 509.

CONSULAR TRIBUNES, Roman.—The plebeians of Rome having demanded admission for their order to the consulship, a compromise was arranged, B. C. 444, which settled that, thereafter, "the people should be free to elect either consuls—that is, patricians according to the old law—or in their place other officers under the title of 'military tribunes with consular power,' consisting of patricians and plebeians. . . . It is not reported in what respect the official competency of the consular tribunes was to differ from that of the consuls. Still, so much is plain, that the difference consisted not alone in name. The number of the consular tribunes was in the beginning fixed at three."—W. Ihne, *Hist. of Rome*, bk. 2, ch. 11.

CONTIONES, OR CONCIONES.—The contiones, or conciones, at Rome, were assemblies of the people, "less formal than the comitia," held for the mere purpose of discussing public questions, and incapable of passing any binding resolution. "They could not be called together by anybody except the magistrates, neither had every man the liberty of speaking in them, of making proposals or of declaring his opinion; . . . but even in this limited manner public questions could be discussed and the people could be enlightened. . . . The custom of discussing public questions in the contiones became general after the comitia of the tribes had obtained full legislative competency."—W. Ihne, *Hist. of Rome*, bk. 6, ch. 1.—See, also, *COMITIA CURIATA*.

CONTRABANDS.—In the early part of the American civil war of 1861-65, escaped slaves were called contrabands, General Butler having declared them to be "contraband of war." See *UNITED STATES OF AM.*: A. D. 1861 (MAY).

CONVOCACTION.—The assemblies of the clergy in the two ecclesiastical provinces of England are called the Convocation of Canterbury and the Convocation of York. The former, which is the superior body, frequently receives the name of Convocation, simply. It is constituted upon the model of Parliament, and is, in fact, the Parliament of the Church of England. It has two Houses: the upper one consisting of

the Archbishop and his Bishops; the lower one composed of deans, archdeacons and proctors, representing the inferior clergy. The Convocation of York has but one House. Since 1716 Convocation has possessed slight powers.

A. D. 1216-1880.—Since the fall of the Greek Empire.—Corfu was won by the Venetians in the early years of the Latin conquest of the Greek empire (1216), but was presently lost, to come back again into the possession of the republic 170 years later. "No part of Greece has been so often cut off from the Greek body. Under Pyrrhos and Agathoklès, no less than under Michael Angelos and Roger, it obeyed an Epeiriot or Sicilian master. . . . At last, after yet another turn of Sicilian rule, it passed for 400 years [1386-1797] to the great commonwealth [of Venice]. In our own day Corfu was not added to free Greece till long after the deliverance of Attica and Peloponnèsos. But, under so many changes of foreign masters, the island has always remained part of Europe and of Christendom. Alone among the Greek lands, Corfu has never passed under barbarian rule. It has seen the Turk only, for one moment, as an invader [see TURKS: A. D. 1714-1718], for another moment as a nominal overlord."—E. A. Freeman, *Historical Geog. of Europe*, p. 408.—See IONIAN ISLANDS: To 1814.

CORINIUM.—A Roman city in Britain, on the site of which is the modern city of Cirencester. Some of the richest mosaic pavements found in England have been uncovered there.—T. Wright, *Celt. Roman and Saxon*, ch. 5.

CORINTH.—Corinth, the chief city and state, in ancient times, of the narrow isthmus which connects Peloponnesus with northern Greece, "owed everything to her situation. The double sea by the isthmus, the confluence of the high road of the whole of Hellas, the rocky citadel towering aloft over land and sea, through which rushed—or around which flowed—an abundance of springs; all these formed so extraordinary a commixture of advantages, that, if the intercourse with other countries remained undisturbed, they could not but call forth an important city. As in Argolis, so on the isthmus also, other besides Dorian families had in the days of the migration helped to found the new state. . . . By the side of the Dorian, five non-Dorian tribes existed in Corinth, attesting the multitude and variety of population, which were kept together as one state by the royal power of the Heraclidæ, supported by the armed force of the Dorians. In the ninth century [B. C.] the royal power passed into the hands of a branch of the Heraclidæ deriving its descent from Bacchis [one of the earliest of the kings]; and it was in the extraordinary genius of this royal line that the greatness of the city originated. The Bacchiadæ opened the city to the immigration of the industrious settlers who hoped to make their fortunes more speedily than elsewhere at this meeting point of all Greek highroads of commerce. They cherished and advanced every invention of importance. . . . They took commerce into their own hands, and established the tramway on the isthmus, along which ships were, on rollers, transported from one gulf to the other. . . . They converted the gulf which had hitherto taken its name from Crisa into the Corinthian, and secured its narrow

inlet by means of the fortified place of Molycria. . . . They continued their advance along the coast and occupied the most important points on the Achelous."—E. Curtius, *Hist. of Greece*, bk. 2, ch. 1.—See, also, TRADE: ANCIENT.

B. C. 745-725.—Constitutional Revolution.—**End of Monarchy.**—**The prytanes.**—**Commercial progress.**—A violent contention which arose between two branches of the Bacchiadæ "no doubt gave the nobles of Corinth power and opportunity to end the struggle by a change in the constitution, and by the discontinuance of the monarchy; this occurred in the year 745 B. C., after eight generations of kings. . . . Yet the place at the head of the commonwealth was not to be entirely taken away from the ancient royal house. A presiding chief (a prytanis), newly elected each year by the whole nobility from the members of the royal race, was henceforward to conduct the government [see PRYTANIS]. It was a peculiar arrangement which this change introduced into Corinth. We may assume that the sovereignty was transferred to the nobles collectively, or to their representative. This representation seems to have been so regulated that each of the eight tribes sent an equal number of members to the Gerousia, i. e. the council of elders. . . . But the first of these eight tribes, to which belonged the royal family, was privileged. From it was chosen the head of the state, an office for which only a Bacchiad was eligible—that is, only a member of the old royal house, which took the foremost place in the first tribe. This clan of the Bacchiadæ is said to have contained 200 men. 'They were numerous and wealthy,' says Strabo. Accordingly the royal house did not exclusively retain the first rank in the state, but only in conjunction with the families connected with it by kindred and race. . . . The new constitution of Corinth, the government by nobles, under the dynastic presidency of one family, became a type for other cantons. It was a Corinthian of the Bacchiadæ who, twenty or thirty years after the introduction of the prytanes, regulated the oligarchy of the Thebans and gave them laws (about 725 B. C.) . . . The fall of the monarchy in Corinth at first brought with it disastrous consequences for the power and prestige of the commonwealth. The communities of the Megarians—either because the new government made increased demands upon them, or because they considered their allegiance had ceased with the cessation of monarchy, and thought the moment was favourable—deserted Corinth and asserted their freedom. The five communities on the isthmus united together around the territory of Megara, lying in the plain by the Saronic Gulf, where the majority of the Doric tribes had settled; the city of Megara, in the vicinity of two ancient fortresses . . . became the chief centre of the communities, now associated in one commonwealth. . . . The important progress of Corinth under the prytany of the Bacchiadæ was not due to successes upon the mainland, but in another sphere. For navigation and commerce no canton in Hellas was more favourably situated. Lying on the neck of the isthmus, it extended from sea to sea, an advantageous position which had indeed first attracted the Phœnicians thither in ancient times. . . . Corinth, says Thucydides, was always from the first a centre of commerce, and abounded in wealth; for the popu-

lation within and without the Peloponnesus communicated with each other more in ancient times by land across the isthmus than by sea. But when the Hellenes became more practised in navigation, the Corinthians with their ships put down piracy and established marts on both sides; and through this influx of riches their city became very powerful."—M. Duncker, *Hist. of Greece*, bk. 3, ch. 3 (v. 2).

B. C. 44.—Restoration by Cæsar.—"In the desolate land of Greece, Cæsar, besides other plans, . . . busied himself above all with the restoration of Corinth. Not only was a considerable burgess-colony conducted thither, but a plan was projected for cutting through the isthmus, so as to avoid the dangerous circumnavigation of the Peloponnesus and to make the whole traffic between Italy and Asia pass through the Corintho-Saronic gulf."—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 11.—"Cæsar sent to Corinth a large number of freedmen, and other settlers were afterwards sent by Augustus; but it is certain that many Greeks came to live in the new Corinth, for it became a Greek town. Corinth was a mass of ruins when the new settlers came, and while they were removing the rubbish, they grubbed up the burial places, where they found a great number of earthen figures and bronze urns, which they sold at a high price and filled Rome with them."—

G. Long, *Decline of the Roman Republic*, v. 5, ch. 32.—“Corinth rapidly rose under these auspices, became a centre of commerce and art, and took the lead among the cities of European Hellas. Here was established the seat of the Roman government of Achaia, and its population, though the representations we have received of it are extravagant, undoubtedly exceeded that of any Grecian rival.”—C. Merivale, *Hist. of the Romans*, ch. 40.

A. D. 1445.—Destruction by the Turks.—The fortifications of the isthmus of Corinth were stormed and the Peloponnesus invaded by Amurath II. in 1445. “Corinth itself, a city sanctified by its antiquity, by its gods, by its arts, by the beauty of its women, by its fountains, its cypresses, its very ruins themselves, whence its unrivalled situation had always restored it, fell anew, buried in its flames, by the hands of Tourakhan, that ancient and ambitious vizier of Amurath. Its flames were seen from Athens, from Ægina, from Lepanto, from Cytheron, from Pindus. The inhabitants, as also those of Patras, were led into slavery in Asia, to the number of 60,000.”—A. Lamartine, *Hist. of Turkey*, bk. 11, sect. 10.

CORONATION.—“The royal consecration in its most perfect form included both coronation and unction. The wearing of a crown was a most ancient sign of royalty, into the origin of which it is useless now to inquire; but the solemn rite of crowning was borrowed from the Old Testament by the Byzantine Cæsars; the second Theodosius was the first emperor crowned with religious ceremonies in Christian times. The introduction of the rite of anointing is less certainly ascertained. It did not always accompany coronation.”—W. Stubbs, *Const. Hist. of Eng.*, ch. 6, sect. 60.

CORPUS JURIS CIVILIS, The.—“The Corpus Juris Civilis represents the Roman law in the form which it assumed at the close of the ancient period (a thousand years after the decemviral legislation of the Twelve Tables), and through which mainly it has acted upon modern times. It was compiled in the Eastern Roman Empire (the Western ceased in 476 A. D.) under the Emperor Justinian, . . . who reigned 527-565 A. D. The plan of the work, as laid out by [his great law-minister] Tribonian, included two principal parts, to be made from the constitutions of the Roman emperors, and from the treatises of the Roman lawyers. The ‘constitutiones’ (law-utterances) of the emperors consisted of—1. ‘Orationes,’ proposals of law, submitted to and adopted by the Senate; 2. ‘Edicta,’ laws issued directly by the emperor as head of the state; 3. ‘Mandata,’ instructions addressed by the emperor to high officers of law and justice; 4. ‘Decreta,’ decisions given by the emperor in cases brought before him by appeal or otherwise; 5. ‘Rescripta,’ answers returned by the emperor when consulted on questions of law by parties in

a suit or by magistrates. . . . Three or four collections had already been made, in which the most important constitutions were selected from the mass, presented in a condensed form, and arranged according to their subjects. The last and most elaborate of these collections was the Theodosian Code, compiled about a century before the accession of Justinian; it is still in great part extant. . . . The new Codex Constitutionem, prepared in little more than a year, was published in April, 529. The next work was to digest the treatises of the most eminent law writers. Thirty-nine were selected, nearly all of whom lived between 100 B. C. and 250 A. D. Their books (2,000 in number) were divided among a body of collaborators (sixteen besides Tribonian), each of whom from the books assigned to him extracted what he thought proper . . . and putting the extracts (9,000 in all) under an arranged series of heads. . . . The Digest—or Pandects (all-receiving), as it is also called from the multiplicity of its sources—was issued with authority of law, in December, 533. . . . While the Digest or Pandects forms much the largest fraction of the Corpus Juris, its relative value and importance are far more than proportionate to its extent. The Digest is, in fact, the soul of the Corpus. . . . To bring the Codex Constitutionem into better conformity with the Digest, it was revised in 534 and issued as we now have it in November of that year. . . . The Corpus Juris includes also an elementary text-book, the Institutiones (founded on the 'institutiones' of Gaius, who flourished about 150). . . . The Institutes, Digest and Codex were given, as a complete body of law, to the law-schools at Constantinople, Rome, Berytus, Alexandria, Cæsarea, to be studied in their five years' curriculum. In the courts it was to supersede all earlier authorities. . . . Later statutes of Justinian, arranged in order of time, form the Novels ('novellæ constitutiones,' most of them in Greek), the last component of the Corpus Juris."

CORSICA: Early history.—"The original inhabitants of Corsica are supposed to have been Ligurians, but at a very early period the people had commercial intercourse with Spain, Ionia and Tuscany. The island was subsequently occupied by the Carthaginians, who, however, were expelled by the Romans during the first Punic war. A few years later Corsica came under the dominion of Rome, and that sway was nominally maintained until the downfall of the Empire. It then fell under the dominion of the Vandals, and after their expulsion owned successively the rule of the Goths, the Saracens and the Pisans, and finally of the Genoese. It came into the possession of the latter people in the year 1120. Pisa subsequently made several attempts to drive out her rivals, but they were in the end void of results. But in 1448, Genoa, having sustained great losses in the constant wars in which she was engaged, was induced to surrender the administration of Corsica and of her colonies in the Levant to a corporation known as the Bank of St George. From that time the island was administered by governors appointed by the Bank of St George, almost precisely in the manner in which, in England, up to 1859, the East Indies were administered by an 'imperium

in imperio.'"—G. B. Malleison, *Studies from Genoese History*, ch. 3.

A. D. 1558-1559.—Revolt against the Genoese rule, and re-subjection. See GENOA: A. D. 1528-1559; and FRANCE: A. D. 1547-1559.

A. D. 1729-1769.—The Struggle for independence.—Romance of King Theodore.—The Paolis.—Cession to France.—The revolt of 1558 was renewed in 1564, but ended in 1567, upon the death of its leader, Sampiero. For the next century and a half, Corsica remained inactive; "depressed and miserable under renewed Genoese exactions and tyrannies, but too exhausted to resume hostilities. In 1729, however, fighting again broke out, suddenly roused by one of the many private wrongs then pressing upon the lower orders, and the rebellion soon spread over the whole island. It was well organized under two leaders of energy and ability, and was more determined in its measures than ever. . . . Genoa had recourse to the emperor of Germany, from whom she bought several thousand mercenaries, who were sent across the sea to try their skill upon these unconquerable islanders. . . . The courage and chivalry of his insular foes . . . won for them the regard of the opposing General Wachtendonk; and, chiefly through his mediation, a treaty, supposed to be favourable to the islanders, was concluded between Genoa and the Corte legislative assembly in 1732. Wachtendonk remained in the island another year to see the treaty carried out, and in June, 1734, the German general returned to his own country. . . . But he had scarcely retired before the treaty was broken. Genoa began anew her system of illegal arrests and attempted assassinations; and, once more, the people arose under Hyacinth Paoli, an obscure native of the little village of Morosaglia, but a man of spirit and talent, and a scholar. Under the direction of this man, and of Giafferi, his colleague, a democratic constitution, in the highest degree prudent and practical, was framed for the Corsican people. . . . Early in the next year occurred a strange and romantic adventure in this adventurous country. A man, handsome and well-dressed, surrounded by obsequious courtiers, and attended by every luxury, landed in the island from a vessel well-furnished with gold, ammunition, and arms. This man was a German adventurer, Baron Theodore von Neuhoff, who, after a romantic youth, had suddenly conceived a desire to become king of Corsica. He was a man of great talent and personal fascination, of good judgment, and enthusiastic disposition. He had fallen in love with the bravery and determination of the Corsicans, and longed to head such a nation. He had put himself into communication with the leading islanders; and, having really some little influence at the continental courts, persuaded them that he had much more. He offered to obtain such assistance from foreign potentates, by his persuasions, as should effectually oust the Genoese; and, in return, requested the crown of Corsica. His genius and his enthusiasm were so great, and his promises so dazzling, that, after some hesitation, the poor Corsicans, in their despair, seized upon this last straw; and in March, 1736, Theodore was crowned king. His exertions for the good of this country were untiring. He established manufactures and promoted with all his power art and commerce, at the same time

that, with all the force of his genius, he endeavoured to persuade foreign powers to lend their assistance to his new subjects in the field. His style of living meanwhile was regal and sumptuous. . . . Towards the conclusion of his first year of sovereignty, Theodore left Corsica on a continental tour, with the avowed object of hastening the promised succour. In two years he returned, bringing with him three large and several smaller war vessels, handsomely laden with ammunition, which had actually been raised by means of his talents and persuasive faculties, chiefly amongst the Dutch. But, meanwhile, the Corsicans had had other affairs to which to attend. France had interfered at the request of Genoa; and negotiations were actively going on, which the arrival of the pseudo-king could only interrupt. Theodore, although now so well attended, found himself unheeded and disregarded; and after a few months was forced to leave his new kingdom to its fate, and to return to the continent. Five years later, in 1743, he again returned, again well equipped, this time with English vessels, but with the same ill success. Convinced now that his chance was over and his dream of royalty destroyed, Theodore returned to England with a sore heart, spending his remaining years in this asylum for dethroned kings and ruined adventurers. His tomb may be seen in Westminster Abbey. For the next five and twenty years the war continued between Corsica and Genoa, still fought out on the blood-deluged plains of the unhappy little island. But the republic of Genoa was now long past her prime, and her energies were fading into senility; and, had it not been for the ever-increasing assistance of France, her intrepid foes would long ere this have got the better of her. In May, 1768, a treaty was signed between Genoa and France, by which the republic ceded her now enfeebled claims on Corsica to her ally, and left her long-oppressed victim to fight the contest out with the French troops. During this time, first Gaffori, then Pasquale Paoli, were the leaders of the people. Gaffori, a man of refinement, and a hero of skill and intrepidity, was murdered in a vendetta in 1753, and in 1755 Pasquale, youngest son of the old patriot Hyacinth Paoli, left his position as officer in the Neapolitan service, and landed, by the general desire of his own people, at Aleria, to undertake the command of the Corsican army. . . . From 1764 to 1768 a truce was concluded between the foes. . . . In August, 1768, the truce was to expire; but, before the appointed day had arrived, an army of 20,000 French suddenly swooped down upon the luckless island. . . . It was a hopeless struggle for Corsica; but the heroism of the undaunted people moved all Europe to sympathy. . . . The Corsicans at first got the better of their formidable foe, at the Bridge of Golo, in the taking of Borgo, and in other lesser actions. . . . Meanwhile, the country was being destroyed, and the troops becoming exhausted. . . . The battle of Ponte Nuovo, on the 9th of May, 1769, at once and forever annihilated the Corsican cause. . . . After this victory, the French rapidly gained possession of the whole island, and shortly afterwards the struggle was abandoned. . . . In the same year, 1769, Napoleon Buonaparte was born in the house out of the Place du Marché at Ajaccio. 'I was born,' he said himself in a

letter to Paoli, 'the year my country died.'—G. Forde, *A Lady's Tour in Corsica*, v. 2, ch. 18.

CORTES, The early Spanish.—The old monarchical constitutions of Castile and Aragon.—"The earliest instance on record of popular representation in Castile occurred at Burgos, in 1169; nearly a century antecedent to the celebrated Leicester parliament. Each city had but one vote, whatever might be the number of its representatives. A much greater irregularity, in regard to the number of cities required to send deputies to cortes [the name signifying 'court'] on different occasions, prevailed in Castile, than had ever existed in England; though, previously to the 15th century, this does not seem to have proceeded from any design of infringing on the liberties of the people. The nomination of these was originally vested in the householders at large, but was afterwards confined to the municipalities,—a most mischievous alteration, which subjected their election eventually to the corrupt influence of the crown. They assembled in the same chamber with the higher orders of the nobility and clergy, but on questions of moment, retired to deliberate by themselves. After the transaction of other business, their own petitions were presented to the sovereign, and his assent gave them the validity of laws. The Castilian commons, by neglecting to make their money grants depend on corresponding concessions from the crown, relinquished that powerful check on its operations so beneficially exerted in the British parliament, but in vain contended for even there till a much later period than that now under consideration. Whatever may have been the right of the nobility and clergy to attend in cortes, their sanction was not deemed essential to the validity of legislative acts; for their presence was not even required in many assemblies of the nation which occurred in the 14th and 15th centuries. The extraordinary power thus committed to the commons was, on the whole, unfavorable to their liberties. It deprived them of the sympathy and cooperation of the great orders of the state, whose authority alone could have enabled them to withstand the encroachments of arbitrary power, and who, in fact, did eventually desert them in their utmost need. . . . The Aragonese cortes was composed of four branches, or arms; the ricos hombres, or great barons; the lesser nobles, comprehending the knights; the clergy; and the commons. The nobility of every denomination were entitled to a seat in the legislature. The ricos hombres were allowed to appear by proxy, and a similar privilege was enjoyed by baronial heiresses. The number of this body was very limited, twelve of them constituting a quorum. The arm of the ecclesiastics embraced an ample

delegation from the inferior as well as higher clergy. It is affirmed not to have been a component of the national legislature until more than a century and a half after the admission of the commons. Indeed, the influence of the church was much less sensible in Aragon than in the other kingdoms of the Peninsula. . . . The commons enjoyed higher consideration and civil privileges. For this they were perhaps somewhat indebted to the example of their Catalan neighbors, the influence of whose democratic institutions naturally extended to other parts of the Aragonese monarchy. The charters of certain cities accorded to the inhabitants privileges of nobility, particularly that of immunity from taxation; while the magistrates of others were permitted to take their seats in the order of hidalgos. From a very early period we find them employed in offices of public trust, and on important missions. The epoch of their admission into the national assembly is traced as far back as 1133, several years earlier than the commencement of popular representation in Castile. Each city had the right of sending two or more deputies selected from persons eligible to its magistracy; but with the privilege of only one vote, whatever might be the number of its deputies. Any place which had been once represented in cortes might always claim to be so. By a statute of 1307, the convocation of the states, which had been annual, was declared biennial. The kings, however, paid little regard to this provision, rarely summoning them except for some specific necessity. The great officers of the crown, whatever might be their personal rank, were jealously excluded from their deliberations. . . . It was in the power of any member to defeat the passage of a bill, by opposing to it his veto or dissent, formally registered to that effect. He might even interpose his negative on the proceedings of the house, and thus put a stop to the prosecution of all further business during the session. This anomalous privilege, transcending even that claimed in the Polish diet, must have been too invidious in its exercise, and too pernicious in its consequences, to have been often resorted to. This may be inferred from the fact that it was not formally repealed until the reign of Philip II., in 1593. . . . The cortes exercised the highest functions, whether of a deliberative, legislative, or judicial nature. It had a right to be consulted on all matters of importance, especially on those of peace and war. No law was valid, no tax could be imposed, without its consent; and it carefully provided for the application of the revenue to its destined uses. It determined the succession to the crown, removed obnoxious ministers, reformed the household and domestic expenditure of the monarch, and exercised the power, in the most unreserved manner, of withholding supplies, as well as of resisting what it regarded as an encroachment on the liberties of the nation. . . . The statute-book affords the most unequivocal evidence of the fidelity with which the guardians of the realm discharged the high trust reposed in them, in the numerous enactments it exhibits for the security both of person and property. Almost the first page which meets the eye in this venerable record contains the General Privilege, the Magna Charta, as it has been well denominated, of Aragon. It was granted by Peter the Great to the cortes at Sara-

gossa, in 1283. It embraces a variety of provisions for the fair and open administration of justice; for ascertaining the legitimate powers intrusted to the cortes; for the security of property against exactions of the crown; and for the conservation of their legal immunities to the municipal corporations and the different orders of nobility. . . . The Aragonese, who rightly regarded the General Privilege as the broadest basis of their liberties, repeatedly procured its confirmation by succeeding sovereigns. . . . The judicial functions of the cortes have not been sufficiently noticed by writers. They were extensive in their operation, and gave it the name of the General Court."—W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella, introd., sect. 1-2.*—"Castile bore a closer analogy to England in its form of civil polity than France or even Aragon. But the frequent disorders of its government and a barbarous state of manners rendered violations of law much more continual and flagrant than they were in England under the Plantagenet dynasty. And besides these practical mischiefs, there were two essential defects in the constitution of Castile, through which perhaps it was ultimately subverted. It wanted those two brilliants in the coronet of British liberty, the representation of freeholders among the commons, and trial by jury. The cortes of Castile became a congress of deputies from a few cities, public spirited, indeed, and intrepid, as we find them in bad times, to an eminent degree, but too much limited in number, and too unconnected with the territorial aristocracy, to maintain a just balance against the crown. . . . Perhaps in no European monarchy except our own was the form of government more interesting than in Aragon, as a fortunate temperament of law and justice with the royal authority. . . . Blancas quotes a noble passage from the acts of cortes in 1451. 'We have always heard of old time, and it is found by experience, that seeing the great barrenness of this land, and the poverty of the realm, if it were not for the liberties thereof, the folk would go hence to live and abide in other realms and lands more fruitful.' This high spirit of freedom had long animated the Aragonese. After several contests with the crown in the reign of James I., not to go back to earlier times, they compelled Peter III. in 1283 to grant a law called the General Privilege, the Magna Charta of Aragon, and perhaps a more full and satisfactory basis of civil liberty than our own." They further "established a positive right of maintaining their liberties by arms. This was contained in the Privilege of Union granted by Alfonso III. in 1287, after a violent conflict with his subjects; but which was afterwards so completely abolished, and even eradicated from the records of the kingdom, that its precise words have never been recovered. . . . That watchfulness over public liberty which originally belonged to the aristocracy of ricos hombres . . . and which was afterwards maintained by the dangerous Privilege of Union, became the duty of a civil magistrate whose office and functions are the most pleasing feature in the constitutional history of Aragon. The Justiza or Justiciary of Aragon has been treated by some writers as a sort of anomalous magistrate. . . . But I do not perceive that his functions were, in any essential respect, different from those of the chief justice of England, divided,

from the time of Edward I., among the judges of the King's Bench. . . . All the royal as well as territorial judges were bound to apply for his opinion in case of legal difficulties arising in their courts, which he was to certify within eight days. By subsequent statutes of the same reign it was made penal for any one to obtain letters from the king, impeding the execution of the Justiza's process, and they were declared null. Inferior courts were forbidden to proceed in any business after his prohibition. . . . There are two parts of his remedial jurisdiction which deserve special notice. These are the processes of *juris firma*, or *firma del derecho*, and of manifestation. The former bears some analogy to the writs of 'pone' and 'certiorari' in England, through which the Court of King's Bench exercises its right of withdrawing a suit from the jurisdiction of inferior tribunals. But the Aragonese *juris firma* was of more extensive operation. . . . The process termed manifestation afforded as ample security for personal liberty as that of *juris firma* did for property."—H. Hallam, *The Middle Ages*, ch. 4 (v. 2).—For some account of the loss of the old constitutional liberties of Castile and Aragon, under Charles V., see SPAIN: A. D. 1518-1522.—"The councils or meetings of the bishops after the reconquest, like the later Councils of Toledo, were always 'jussu regis,' and were attended by counts and magnates 'ad videndum sine ad audiendum verbum Domini.' But when the ecclesiastical business was ended, it was natural that the lay part of the assembly should discuss the affairs of the kingdom and of the people; and insensibly this after-part of the proceedings grew as the first part diminished in importance. The exact date when the Council merged into the Curia or Cortes is difficult to determine; Señor Colmeiro takes the so-named Council of Leon in 1020 as the true starting-point of the latter. The early monarchy of Spain was elective, and the acclamation of the assembled people (plebs) was at least theoretically necessary to render the king's election valid. The presence of the citizens at the Cortes or Zamora, though stated by Sandoval and Morales, is impugned by Señor Colmeiro; but at the Council of Oviedo in 1115 were present bishops of Spain and Portugal 'cum principibus et plebe prædictæ regionis,' and these latter also subscribed the Acts. Still, though present and making their influence more and more felt, there is no record of a true representation of cities until Alfonso IX. convoked the Cortes of Leon in 1188, 'cum archiepiscopo, et episcopis, et magnatibus regni mei et cum electis civibus ex singulis civitatibus'; from this time the three estates—clergy, nobles, citizens—were always represented in the Cortes of Leon. Unfortunately, the political development of Castille did not synchronise with that of Leon. In general, that of Castille was fully half a century later. We pass by as more than doubtful the alleged presence of citizens at Burgos in 1169; the 'majores civitatum et villarum' at the Cortes of Carrion in 1188 were not deputies, but the judges or governors of twenty-eight cities. It is not till the united Cortes of both kingdoms met at Seville in 1250, that we find true representation in Castille. Castille was always more feudal than Leon. It is in this want of simultaneous development, and in the presence of privileged classes, that we find the germ of the

evils which eventually destroyed the liberties of Spain. Neither the number of deputies nor of the cities represented was ever fixed; at Burgos, in 1315, we find 200 deputies (*procuradores*) from 100 cities; gradually the number sank till seventeen, and finally twenty-two, cities alone were represented. The deputies were chosen from the municipality either by lot, by rotation, or by election; they were the mere spokesmen of the city councils, whose mandate was imperative. Their payment was at first by the cities, but, after 1422, by the king; and there are constant complaints that the salary was insufficient. The reign of Juan II. (1406-54) was fatal to the liberties of Castille; the answers to the demands and petitions of the deputies were deferred; and, in fact, if not in form, the law that no tax should be levied without consent of the Cortes was constantly violated. Still, but for the death of Prince Juan, in 1497, and the advent of the Austrian dynasty with the possession of the Low Countries, the old liberties might yet have been recovered. . . . With the Cortes of Toledo, in 1538, ended the meeting of the three estates. The nobility first, then the clergy, were eliminated from the Cortes, leaving only the proctors of the cities to become servile instruments for the purposes of taxation."—W. Webster, *Review of Colmeiro's "Cortes de los Antiguos Reinos de Leon y de Castilla"* (*Academy*, Aug. 16, 1884).

CORUNNA, Battle of (1809). See SPAIN: A. D. 1808-1809 (AUGUST—JANUARY).

CORUPEDION, Battle of.—A battle fought in western Phrygia, B. C. 281, in which Lysimachus, one of the disputants for Alexander's empire, was defeated by Seleucus, and slain.—C. Thirlwall, *Hist. of Greece*, ch. 60.

CORVÉE.—One of the feudal rights possessed in France (under the old regime, before the Revolution) "by the lord of the manor over his subjects, by means of which he could employ for his own profit a certain number of their days of labour, or of their oxen and horses. The 'Corvée à volonté,' that is to say, at the arbitrary will of the Seigneur, had been completely abolished [before the Revolution]: forced labour had been for some time past confined to a certain number of days a-year."—A. de Tocqueville, *On the State of Society in France before 1789*, note 4 E. (p. 499).

CORVUS, The Roman. See PUNIC WAR, THE FIRST.

COS, OR KOS.—One of the islands in the Ægean called the Sporades, near the Carian coast of Asia Minor. The island was sacred to Asclepius, or Æsculapeus, and was the birth-place of the celebrated physician Hippocrates, as well as of the painter Apelles. It was an Æolian colony, but joined the Dorian confederacy.

COSMOS, COSMIOS, COSMOPOLIS. See DEMITURGI.

COSSACKS, The.—"The origin of the Cossack tribes is lost in the obscurity of ages; and many celebrated historians are still divided in opinion as to whence the term Cossack, or rather Kosaque, is properly to be derived. This word, indeed, is susceptible of so many etymological explanations, as scarcely to offer for any one of them decided grounds of preference. Everything, however, would seem to favour the belief

that the word Cossack, or Kosaque, was in much earlier use in the vicinity of the Caucasus than in the Ukraine. . . . Sherer, in his 'Annals of Russia Minor,' (La Petite Russie,) traces back the origin of the Cossacks to the ninth century; but he does not support his assertion by any facts clothed with the dignity of historical truth. It appears certain, however, that the vast pasture lands between the Don and the Dnieper, the country lying on the south of Kiow, and traversed by the Dnieper up to the Black Sea, was the principal birthplace of the Cossacks. When, in 1242, Batukhan came with 500,000 men to take possession of the empire which fell to his share of the vast inheritance left by Tchingis Khan [see MONGOLS: A. D. 1229-1294], he extirpated many nations and displaced many others. One portion of the Komans flying from the horrors of this terrific storm, and arriving on the borders of the Caspian Sea, on the banks of the Iaïk, (now Ouralsek,) turned to the left, and took refuge between the embouchures of that river, where they dwelt in small numbers, apart from their brethren, in a less fertile climate. These were, incontestably, the progenitors of the Cossacks of the Iaïk, who are, historically, scarcely important enough for notice. . . . At the approach of this formidable invasion towards the Don, that portion of the Komans located on the left bank took refuge in the marshes, and in the numerous islands formed by that river near its embouchure. Here they found a secure retreat; and from thence, having, from their new position, acquired maritime habits and seafaring experience, they not only, themselves, resorted to piracy as a means of existence, but likewise enlisted in a formidable confederacy, for purposes of rapine and pillage, all the roving and discontented tribes in their surrounding neighbourhood. These latter were very numerous. The Tartars, ever but indifferent seamen, had not the courage to join them in these piratical expeditions. This division of the Komans is indubitably the parent stock of the modern Cossacks of the Don, by far the most numerous of the Cossack tribes: by amalgamation, however, with whole hosts of Tartar and Calmuck hordes, lawless, desperate, and nomadic as themselves, they lost, in some degree, the primitive and deeply marked distinctive character of their race. The Komans of the Dnieper offered no more energetic resistance to the invading hordes of Batukhan than had been shown by their brethren of the Don: they dispersed in various directions, and from this people, flying at the advance of the ferocious Tartars, descended a variety of hordes, who occasionally figure in history as distinct and independent nations. . . . [They] ultimately found a permanent resting-place in the wild islets of the Dnieper, below the cataracts, where dwelt already a small number of their ancient compatriots, who had escaped the general destruction of their nation. This spot became the cradle of the Cossacks of the Ukraine, or of the tribes known in after times as the Polish Cossacks. When Guedynum, Grand Duke of Lithuania, after having defeated twelve Russian princes on the banks of the Piërna, conquered Kiow with its dependencies in 1320, the wandering tribes scattered over the steppes of the Ukraine owned his allegiance. After the victories of Olgierd, of Vitold, and of Ladislas Jagellon, over the Tartars and the Russians,

large bodies of Scythian militia, known subsequently by the comprehensive denomination of Cossacks, or Kosaques, served under these conquerors: and after the union of the Grand Duchy of Lithuania with Poland, in 1386, they continued under the dominion of the grand dukes of Lithuania, forming, apparently, an intermediate tribe or caste, superior to the peasantry and inferior to the nobles. At a later period, when the Ukraine was annexed to the Polish crown, they passed under the protection of the kings of Poland. . . . Although there may, doubtless, exist several species or castes of Cossacks, and to whom Russia in order to impose on Europe, is pleased to give as many different names, yet there never have been, nor will there ever be, properly speaking, more than two principal tribes of the Cossack nation, namely the Cossacks of the Don, or Don-Cossacks, and the Cossacks of the Black Sea, known in ancient times as the Polish Cossacks, or Zaporowsey Kozacy. . . . The Cossacks [of the Don] . . . have rendered signal service to Russia, which, ever since the year 1549, has taken them under her protection, without, however, the existence of any official act, treaty, or stipulation, confirming their submission to that power. . . . The Don-Cossacks enjoy a certain kind of liberty and independence; they have a hetman, attaman, or chief, nominated by the Emperor of Russia; and to this chief they yield an obedience more or less willing and implicit; in general, they are commanded only by Cossack officers, who take equal rank in the Russian army. They have a separate war administration of their own; although they are compelled to furnish a stated number of recruits who serve in a manner for life, inasmuch as they are rarely discharged before attaining sixty years of age: on the whole, their condition is happier than that of the rest of the Russian population. They belong to the Greek-Russian church. The existence of this small republic of the Don, in the very heart of the most despotic and most extensive empire in the world, appears to constitute a problem, the solution of which is not as yet definitely known, and the ultimate solution of which yet remains to be ascertained." —H. Krasinski, *The Cossacks of the Ukraine*, ch. 1.—The Cossacks of the Ukraine transferred their allegiance from the King of Poland to the Czar of Russia in 1654, after a revolt led by their hetman, Bogdan Khmelnitski, in which they were assisted by the neighboring Tartars, and which was accompanied by terrible scenes of slaughter and destruction. COTHON OF CARTHAGE, The.—"There were two land-locked docks or harbours, opening the one into the other, and both, it would seem, the work of human hands. . . . The outer harbour was rectangular, about 1,400 feet long and 1,100 broad, and was appropriated to merchant vessels; the inner was circular like a drinking cup, whence it was called the Cothon, and was reserved for ships of war. It could not be approached except through the merchant harbour, and the entrance to this last was only 70 feet wide, and could be closed at any time by chains. The war harbour was entirely surrounded by quays, containing separate docks for 220 ships. In front of each dock were two Ionic pillars of marble, so that the whole must have presented the appearance of a splendid circular colonnade. Right in the centre of the harbour was an island, the headquarters of the admiral."—R. B. Smith, *Carthage and the Carthaginians*, ch. 20.

COTTON MANUFACTURE: The great inventions in spinning and weaving.—"Cotton had been used in the extreme East and in the extreme West from the earliest periods of which we have any record. The Spaniards, on their discovery of America, found the Mexicans clothed in cotton. . . . But though the use of cotton had been known from the earliest ages, both in India and America, no cotton goods were imported into Europe; and in the ancient world both rich and poor were clothed in silk, linen, and wool. The industrious Moors introduced cotton into Spain. Many centuries afterwards cotton was imported into Italy, Saxony and the Low Countries. Isolated from the rest of Europe, with little wealth, little industry, and no roads; rent by civil commotions; the English were the last people in Europe to introduce the manufacture of cotton goods into their own homes. Towards the close of the 16th century, indeed, cotton goods were occasionally mentioned in the Statute Book, and the manufacture of the cottons of Manchester was regulated by Acts passed in the reigns of Henry VIII., Edward VI., and Elizabeth. But there seem to be good reasons for concluding that Manchester cottons, in the time of the Tudors, were woollen goods, and did not consist of cotton at all. More than a century elapsed before any considerable trade in cotton attracted the attention of the legislature. The woollen manufacturers complained that people were dressing their children in printed cottons; and Parliament was actually persuaded to prohibit the introduction of Indian printed calicoes. Even an Act of Parliament, however, was unable to extinguish the growing taste for Indian cottons. . . . The taste for cotton led to the introduction of calico-printing in London; Parliament in order to encourage the new trade, was induced to sanction the importation of plain cotton cloths from India under a duty. The demand, which was thus created for calicoes, probably promoted their manufacture at home. . . . Up to the mid-

dle of the last century cotton goods were really never made at all. The so-called cotton manufactures were a combination of wool or linen and cotton. No Englishman had been able to produce a cotton thread strong enough for the warp. . . . The superior skill of the Indian manufacturers enabled them to use cotton for a warp; while clumsy workmanship made the use of cotton as a warp unattainable at home. In the middle of the 18th century, then, a piece of cotton cloth in the true sense of the term, had never been made in England. The so-called cotton goods were all made in the cottages of the weavers. The yarn was carded by hand; it was spun by hand; it was worked into cloth by a hand loom. . . . The operation of weaving was, however, much more rapid than that of spinning. The weaver consumed more weft than his own family could supply him with; and the weavers generally experienced the greatest difficulty in obtaining sufficient yarn. About the middle of the 18th century the ingenuity of two persons, a father and a son, made this difference more apparent. The shuttle had originally been thrown by the hand from one end of the loom to the other. John Kay, a native of Bury, by his invention of the fly-shuttle [patented in 1733], saved the weaver from this labour. . . . Robert Kay, John Kay's son, added the drop-box, by means of which the weaver was able 'to use any one of three shuttles, each containing a different coloured weft, without the trouble of taking them from and replacing them in the lathe.' By means of these inventions the productive power of each weaver was doubled. . . . Carding and roving were both slowly performed. . . . The trade was in this humble and primitive state when a series of extraordinary and unparalleled inventions revolutionised the conditions on which cotton had been hitherto prepared. A little more than a century ago John Hargreaves, a poor weaver in the neighbourhood of Blackburn, was returning home from a long walk, in which he had been purchasing a further supply of yarn for his loom. As he entered his cottage, his wife Jenny accidentally upset the spindle which she was using. Hargreaves noticed that the spindles which were now thrown into an upright position, continued to revolve, and that the thread was still spinning in his wife's hand. The idea immediately occurred to him that it would be possible to connect a considerable number of upright spindles with one wheel, and thus multiply the productive power of each spinster. . . . Hargreaves succeeded in keeping his admirable invention secret for a time; but the powers of his machine soon became known. His ignorant neighbours hastily concluded that a machine, which enabled one spinster to do the work of eight, would throw multitudes of persons out of employment. A mob broke into his house and destroyed his machine. Hargreaves himself had to retire to Nottingham, where, with the friendly assistance of another person, he was able to take out a patent [1770] for the spinning-jenny, as the machine, in compliment to his industrious wife, was called. The invention of the spinning-jenny gave a new impulse to the cotton manufacture. But the . . . yarn spun by the jenny, like that which had previously been spun by hand, was neither fine enough nor hard enough to be employed as warp, and linen or woollen threads had consequently to be used for this purpose. In

the very year, however, in which Hargreaves moved from Blackburn to Nottingham, Richard Arkwright [who began life as a barber's assistant] took out a patent [1769] for his still more celebrated machine. . . . 'After many years intense and painful application,' he invented his memorable machine for spinning by rollers; and laid the foundations of the gigantic industry which has done more than any other trade to concentrate in this country the wealth of the world. . . . He passed the thread over two pairs of rollers, one of which was made to revolve much more rapidly than the other. The thread, after passing the pair revolving slowly, was drawn into the requisite tenuity by the rollers revolving at a higher rapidity. By this simple but memorable invention Arkwright succeeded in producing thread capable of employment as warp. From the circumstance that the mill at which his machinery was first erected was driven by water power, the machine received the somewhat inappropriate name of the water frame; the thread spun by it was usually called the water twist. Invention of the spinning-jenny and the water frame would have been useless if the old system of hand-carding had not been superseded by a more efficient and more rapid process. Just as Arkwright applied rotatory motion to spinning, so Lewis Paul introduced revolving cylinders for carding cotton. . . . This extraordinary series of inventions placed an almost unlimited supply of yarn at the disposal of the weaver. But the machinery, which had thus been introduced, was still incapable of providing yarn fit for the finer qualities of cotton cloth. . . . This defect, however, was removed by the ingenuity of Samuel Crompton, a young weaver residing near Bolton. Crompton succeeded in combining in one machine the various excellences 'of Arkwright's water frame and Hargreaves' jenny.' Like the former, his machine, which from its nature is happily called the mule, 'has a system of rollers to reduce the roving; and like the latter it has spindles without bobbins to give the twist. . . . The effects of Crompton's great invention may be stated epigrammatically. . . . The natives of India could spin a pound of cotton into a thread 119 miles long.' The English succeed in spinning the same thread to a length of 160 miles. Yarn of the finest quality was at once at the disposal of the weaver. . . . The ingenuity of Hargreaves, Arkwright and Crompton had been exercised to provide the weaver with yarn. . . . The spinster had beaten the weaver. . . . Edmund Cartwright, a clergyman residing in Kent, happened to be staying at Matlock in the summer of 1784, and to be thrown into the company of some Manchester gentlemen. The conversation turned on Arkwright's machinery, and 'one of the company observed that, as soon as Arkwright's patent expired, so many mills would be erected and so much cotton spun that hands would never be found to weave it.' Cartwright replied 'that Arkwright must then set his wits to work to invent a weaving mill.' . . . Within three years he had himself proved that the invention was practicable by producing the powerloom. Subsequent inventors improved the idea which Cartwright had originated, and within fifty years from the date of his memorable visit to Matlock there were not less than 100,000 powerlooms at work in Great Britain alone. . . . Other inventions, less generally remembered, were

hardly less wonderful or less beneficial than these. . . . Scheele, the Swedish philosopher, discovered in 1774 the bleaching properties of chlorine, or oxy muriatic acid. Berthollet, the French chemist, conceived the idea of applying the acid to bleaching cloth. . . . In the same year in which Watt and Henry were introducing the new acid to the bleacher, Bell, a Scotchman, was laying the foundations of a trade in printed calicoes. 'The old method of printing was by blocks of sycamore.' . . . This clumsy process was superseded by cylinder printing. . . . Such are the leading inventions, which made Great Britain in less than a century the wealthiest country in the world.'—S. Walpole, *Hist. of Eng. from 1815*, v. 1, ch. 1.

COUNCILS OF THE CHURCH, General or Ecumenical.—There are seven councils admitted by both the Greek and Latin churches as œcumenical (or ecumenical)—that is general, or universal. The Roman Catholics recognize thirteen more, making twenty in all—as follows: 1. The synod of apostles in Jerusalem. 2. The first Council of Nice, A. D. 325 (see NICEÆA, THE FIRST COUNCIL). 3. The first Council of Constantinople, A. D. 381. 4. The first Council of Ephesus, A. D. 431. 5. The Council of Chalcedon, A. D. 451. 6. The second Council of Constantinople, A. D. 553. 7. The third Council of Constantinople, A. D. 681. 8. The second Council of Nice, A. D. 787. 9. The fourth Council of Constantinople, A. D. 869. 10. The first Lateran Council, A. D. 1123. 11. The second Lateran Council, A. D. 1139. 12. The third Lateran Council, A. D. 1179. 13. The fourth Lateran Council, A. D. 1215. 14. The first œcumenical synod of Lyon, A. D. 1245. 15. The second œcumenical synod of Lyon, A. D. 1274. 16. The Synod of Vienne in Gaul, A. D. 1311. 17. The Council of Constance, A. D. 1414 (see PAPACY: A. D. 1414-1418). 18. The Council of Basel, A. D. 1431 (see PAPACY: A. D. 1431-1448). 19. The Council of Trent, A. D. 1545 (see PAPACY: A. D. 1537-1563). 20. The Council of the Vatican, A. D. 1869 (see PAPACY: A. D. 1869-1870).

COUNT AND DUKE, Roman.—Origin of the titles.—"The defence of the Roman empire was at length committed [under Constantine and his successors] to eight masters-general of the

cavalry and infantry. Under their orders thirty-five military commanders were stationed in the provinces—three in Britain, six in Gaul, one in Spain, one in Italy, five on the Upper and four on the Lower Danube, in Asia eight, three in Egypt, and four in Africa. The titles of Counts and Dukes, by which they were properly distinguished, have obtained in modern languages so very different a sense that the use of them may occasion some surprise. But it should be recollected that the second of those appellations is only a corruption of the Latin word which was indiscriminately applied to any military chief. All these provincial generals were therefore dukes; but no more than ten among them were dignified with the rank of counts or companions, a title of honour, or rather of favour, which had been recently invented in the court of Constantine. A gold belt was the ensign which distinguished the office of the counts and dukes.”

—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 17.—“The Duke and the Count of modern Europe—what are they but the Generals and Companions (Dukes and Comites) of a Roman province? Why or when they changed places, the Duke climbing up into such unquestioned pre-eminence over his former superior the Count, I know not, nor yet by what process it was discovered that the latter was the precise equivalent of the Scandinavian Jarl.”—T. Hodgkin, *Italy and Her Invaders*, bk. 1, ch. 3.

COUNT OF THE DOMESTICS.—In the organization of the Imperial Household, during the later period of the Roman empire, the officers called Counts of the Domestics “commanded the various divisions of the household troops, known by the names of Domestici and Protectores, and thus together replaced the Prætorian Prefect of the earlier days of the Empire. . . . Theoretically, their duties would not greatly differ from those of a Colonel in the Guards.”—T. Hodgkin, *Italy and Her Invaders*, bk. 1, ch. 3.

COUNT OF THE SACRED LARGESSES.—In the later Roman empire, “the Count who had charge of the Sacred (i. e. Imperial) Bounty, should have been by his title simply the Grand Almoner of the Empire. . . . In practice, however, the minister who took charge of the Imperial Largesses had to find ways and means for every other form of Imperial expenditure. . . . The Count of the Sacred Largesses was therefore in fact the Chancellor of the Exchequer of the Empire.”—T. Hodgkin, *Italy and Her Invaders*, bk. 1, ch. 3.

COUREURS DE BOIS.—“Out of the beaver trade [in the 17th century] rose a huge evil, baneful to the growth and the morals of Canada. All that was most active and vigorous in the colony took to the woods, and escaped from the control of intendants, councils and priests, to the savage freedom of the wilderness.

Not only were the possible profits great, but, in the pursuit of them, there was a fascinating element of adventure and danger. The bush rangers, or *coureurs de bois*, were to the king an object of horror. They defeated his plans for the increase of the population, and shocked his native instinct of discipline and order. Edict after edict was directed against them; and more than once the colony presented the extraordinary spectacle of the greater part of its young men turned into forest outlaws. . . . We hear of seigniories abandoned; farms turning again into forests; wives and children left in destitution. The exodus of the *coureurs de bois* would take at times the character of an organized movement. The famous Du Lhut is said to have made a general combination of the young men of Canada to follow him into the woods. Their plan was to be absent four years, in order that the edicts against them might have time to relent. The intendant Duchesneau reported that 800 men out of a population of less than 10,000 souls had vanished from sight in the immensity of a boundless wilderness. Whereupon the king ordered that any person going into the woods without a license should be whipped and branded for the first offence, and sent for life to the galleys for the second. . . . Under such leaders as Du Lhut, the *coureurs de bois* built forts of palisades at various points throughout the West and Northwest. They had a post of this sort at Detroit some time before its permanent settlement, as well as others on Lake Superior and in the Valley of the Mississippi. They occupied them as long as it suited their purposes, and then abandoned them to the next comer. Michillimackinac was, however, their chief resort.”

CRÉDIT MOBILIER, French.—A great banking corporation formed in France in 1852, which caused a disastrous inflation of credits.

CREDIT MOBILIER SCANDAL.—On the meeting of the Congress of the United States in December, 1872, attention was called by the Speaker to charges made in the preceding canvass "that the Vice-President, the Vice-President elect, the Secretary of the Treasury, several Senators, the Speaker of the House, and a large number of Representatives had been bribed, during the years 1867 and 1868, by presents of stock in a corporation known as the Credit Mobilier [organized to contract for building the Union Pacific Railroad] to vote and act for the benefit of the Union Pacific Railroad Company. On his motion, an investigating committee was appointed, L. P. Poland, of Vermont, being chairman. The Poland Committee reported February 18th, 1873, recommending the expulsion of Oakes Ames, of Massachusetts, for 'selling to members of Congress shares of the stock of the Credit Mobilier below their real value, with intent thereby to influence the votes of such members,' and of James Brooks, of New York, for receiving such stock. The House modified the proposed expulsion into an 'absolute condemnation' of the conduct of both members."—A. Johnston, *Hist. of Am. Politics*, pp. 219-220.—*Rept. of Select Com.* (42d Cong., 3d sess., H. R. rept. no. 77).

CREOLE.—"In Europe it is very common to attach to the term Creole the idea of a particular complexion. This is a mistake. The designation Creole [in Spanish American regions] properly belongs to all the natives of America born of parents who have emigrated from the Old World, be those parents Europeans or Africans. There are, therefore, white as well as black Creoles. . . . The term Creole is a corruption of the Spanish word 'criollo,' which is derived from 'criar,' to create or to foster. The Spaniards apply the term 'criollo' not merely to the human race, but also to animals propagated in the colonies, but of pure European blood: thus they have creole horses, bullocks, poultry, &c."—J. J. Von Tschudi, *Travels in Peru*, ch. 5, and foot-note.—"The term Creole is commonly applied in books to the native of a Spanish colony descended from European ancestors, while often the popular acceptance conveys the idea of an origin partly African. In fact, its meaning varies in different times and regions, and in Louisiana alone has, and has had, its broad and its close, its earlier and its later, significance. For instance, it did not here first belong to the descendants of Spanish, but of French settlers. But such a meaning implied a certain excellence of origin, and so came early to include any native of French or Spanish descent by either parent, whose pure non-mixture with the slave race entitled him to social rank. Much later the term was adopted by, not conceded to, the natives of European-African, or Creole-African blood, and is still so used among themselves. At length the spirit of commerce availed itself of the money value of so honored a title, and broadened its meaning to take in any creature or thing of variety or manufacture peculiar to Louisiana, that might become an object of sale, as Creole ponies, chickens, cows, shoes, eggs, wagons, baskets, cabbages, etc. . . . There are no English, Scotch, Irish, Western, or Yankee Creoles, these all being included under the distinctive term 'Americans.' . . . There seems to be no more serviceable definition of the Creoles of Louisiana or of New Orleans than to say they are the French-speaking, native, ruling class."—G. E. Waring, Jr., and G. W. Cable, *Hist. and Present Condition of New Orleans (Tenth Census of the U. S., v. 19, p. 218)*.

CRETAN LABYRINTH. See LABYRINTHS.

CRETE.—"The institutions of the Cretan state show in many points so great a similarity to those of Sparta, that it is not surprising if it seemed to the ancients as though either Crete were a copy of Sparta, or Sparta of Crete. Meanwhile this similarity may be explained, apart from intentional imitation, by the community of nationality, which, under like conditions, must produce like institutions. For in Crete, as in Laconia, Dorians were the ruling people, who had subdued the old inhabitants of the island and placed them in a position of subordination. . . . It is, however, beyond doubt that settle-

ments were made in Crete by the Phoenicians, and that a large portion of the island was subject to them. In the historical period, it is true, we no longer find them here; we find, on the contrary, only a number of Greek states, all moreover Dorian. Each of these consisted of a city with its surrounding district, in which no doubt also smaller cities in their turn were found standing in a relation of subordination to the principal city. For that each city of the 'ninety-cities' or 'hundred-cities' isle, as Homer calls it, formed also an independent state, will probably not be supposed. As independent states our authorities give us reason to recognize about seventeen. The most important of these were in earlier times Cnossus, Gortyn and Cydonia."—G. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 2.—See ASIA MINOR: THE GREEK COLONIES.

B. C. 68-66.—**The Roman Conquest.**—The Romans came into collision with the Cretans during their conflict with the Cilician pirates. The Cretans, degenerate and half piratical themselves, had formed an alliance with the professional buccaneers, and defeated, off Cydonia, a Roman fleet that had been sent against the latter, B. C. 71. They soon repented of the provocation they had offered and sent envoys to Rome to buy peace by heavy bribes; but neither the penitence nor the bribes prevailed. Three years passed, however, before the proconsul, Quintus Metellus, appeared in Crete (B. C. 68) to exact satisfaction, and two years more were spent in overcoming the stubborn resistance of the islanders. The taking of Cydonia cost Metellus a bloody battle and a prolonged siege. Cnossus and other towns held out with equal courage. In the end, however, Crete was added to the conquered dominions of Rome. At the last of the struggle there occurred a conflict of jurisdiction between Metellus and Pompey, and their respective forces fought with one another on the Cretan soil.—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 4.

A. D. 823.—**Conquest by the Saracens.**—"The reign of Al Hakem, the Omniade Caliph of Spain, was disturbed by continual troubles; and some theological disputes having created a violent insurrection in the suburbs of Cordova, about 15,000 Spanish Arabs were compelled to emigrate in the year 815. The greater part of these desperadoes established themselves at Alexandria, where they soon took an active part in the civil wars of Egypt. The rebellion of Thomas [an officer who disputed the Byzantine throne with Michael II.], and the absence of the naval forces of the Byzantine Empire from the Archipelago, left the island of Crete unprotected. The Andalusian Arabs of Alexandria availed themselves of this circumstance to invade the island, and establish a settlement on it, in the year 823. Michael was unable to take any measures for expelling the invaders, and an event soon happened in Egypt which added greatly to the strength of this Saracen colony. The victories of the lieutenants of the Caliph Almamun compelled the remainder of the Andalusian Arabs to quit Alexandria; so that Abou Hafs, called by the Greeks Apochaps, joined his countrymen in Crete with forty ships, determined to make the new settlement their permanent home. It is said by the Byzantine writers that they commenced their conquest of the island by destroying their fleet, and con-

structing a strong fortified camp, surrounded by an immense ditch, from which it received the name of Chandak, now corrupted by the western nations into Candia. . . . The Saracens retained possession of Crete for 135 years."—G. Finlay, *Hist. of the Byzantine Empire, from 716 to 1057*, bk. 1, ch. 3.—During the stay of these piratical Andalusian Arabs at Alexandria, "they cut in pieces both friends and foes, pillaged the churches and mosques, sold above 6,000 Christian captives, and maintained their station in the capital of Egypt till they were oppressed by the forces and presence of Almamon himself."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 52.

A. D. 961-963.—Recovery from the Saracens.—"In the subordinate station of great domestic, or general of the East, he [Nicephorus Phocas, afterwards emperor, on the Byzantine throne], reduced the island of Crete, and extirpated the nest of pirates who had so long defied, with impunity, the majesty of the Empire. . . . Seven months were consumed in the siege of Candia; the despair of the native Cretans was stimulated by the frequent aid of their brethren of Africa and Spain; and, after the massy wall and double ditch had been stormed by the Greeks, a hopeless conflict was still maintained in the streets and houses of the city. The whole island was subdued in the capital, and a submissive people accepted, without resistance, the baptism of the conqueror."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 52.

CRUSADES: Causes and introductory events.—"Like all the great movements of mankind, the Crusades must be traced to the coincidence of many causes which influenced men of various nations and discordant feelings, at the same period of time, to pursue one common end with their whole heart. Religious zeal, the fashion of pilgrimages, the spirit of social development, the energies that lead to colonisation or conquest, and commercial relations, only lately extended so widely as to influence public opinion, all suddenly received a deep wound. Every class of society felt injured and insulted, and unity of action was created as if by a divine impulse. The movement was facilitated by the circumstance that Europe began to adopt habits of order just at the time when Asia was thrown into a state of anarchy by the invasions of the Seljouk Turks. Great numbers of pilgrims had always passed through the Byzantine empire to visit the holy places in Palestine. We still possess an itinerary of the road from Bordeaux to Jerusalem, by the way of Constantinople, written in the fourth century for the use of pilgrims. Though the disturbed and impoverished state of Europe, after the fall of the Western Empire, diminished the number of pilgrims, still, even in times of the greatest anarchy, many passed annually through the Eastern Empire to Palestine. The improvement which dawned on the western nations during the eleventh century, and the augmented commerce of the Italians, gave additional importance to the pilgrimage to the East. About the year 1064, during the reign of Constantine X., an army or caravan of seven thousand pilgrims passed through Constantinople, led by the Archbishop of Mentz and four bishops. They made their way through Asia Minor, which was then under the Byzantine government; but in the neighbourhood of Jerusalem they were attacked by the Bedouins, and only saved from destruction by the Saracen emir of Ramla, who hastened to their assistance. These pilgrims are reported to have lost 3,000 of their number, without being able to visit either the Jordan or the Dead Sea. The invasions of the Seljouks [see TURKS (THE SELJUKS): A. D. 1073-1092] increased the disorders in Palestine. . . . In the year 1076 the Seljouk Turks took possession of Jerusalem, and immediately commenced harassing the pilgrims with unheard-of exactions. The Saracens had in general viewed the pilgrims with favour, as men engaged in fulfilling a pious duty, or pursuing lawful gain with praiseworthy

industry, and they had levied only a reasonable toll on the pilgrims, and a moderate duty on their merchandise; while in consideration of these imposts, they had established guards to protect them on the roads by which they approached the holy places. The Turks, on the contrary, acting like mere nomads, uncertain of retaining possession of the city, thought only of gratifying their avarice. They plundered the rich pilgrims, and insulted the poor. The religious feelings of the Christians were irritated, and their commerce ruined; a cry for vengeance arose throughout all Europe, and men's minds were fully prepared for an attempt to conquer Palestine, when Peter the Hermit began to preach that it was a sacred duty to deliver the tomb of Christ from the hands of the Infidels." —G. Finlay, *Hist of the Byzantine and Greek Empires*, bk. 3, ch. 2, sect. 1.

A. D. 1094.—The Council of Clermont.—Pope Urban II., one of two rival pontiffs then contending for recognition by the Church, entered with great eagerness into the movement stirred by Peter the Hermit, and gave it a powerful impulse through his support, while obtaining for himself, at the same time, a decisive advantage over his competitor, by the popularity of the agitation. A great Council was convened at Piacenza, A. D. 1094, and a second at Clermont, in the autumn of the same year, to deliberate upon the action to be taken. The city of Clermont could not contain the vast multitude of bishops, clergy and laity which assembled, and an army of many thousands was tented in the surrounding country. To that excited congregation, at a meeting in the great square of Clermont, Pope Urban addressed a speech which is one of the notable utterances of history. "He began by detailing the miseries endured by their brethren in the Holy Land; how the plains of Palestine were desolated by the outrageous heathen, who with the sword and the firebrand carried wailing into the dwellings and flames into the possessions of the faithful; how Christian wives and daughters were defiled by pagan lust; how the altars of the true God were desecrated, and the relics of the saints trodden under foot. 'You,' continued the eloquent pontiff (and Urban II. was one of the most eloquent men of the day), 'you, who hear me, and who have received the true faith, and been endowed by God with power, and strength, and greatness of soul,—whose ancestors have been the prop of Christendom, and whose kings have put a barrier against the progress of the infidel.—I call upon you to wipe off these impurities from the face of the earth, and lift your oppressed fellow-Christians from the depths into which they have been trampled.' . . . The warmth of the pontiff communicated itself to the crowd, and the enthusiasm of the people broke out several times ere he concluded his address. He went on to portray, not only the spiritual but the temporal advantages that would accrue to those who took up arms in the service of the cross. Palestine was, he said, a land flowing with milk and honey, and precious in the sight of God, as the scene of the grand events which had saved mankind. That land, he promised, should be divided among them. Moreover, they should have full pardon for all their offences, either against God or man. 'Go, then,' he added, 'in expiation of your sins; and

go assured, that after this world shall have passed away, imperishable glory shall be yours in the world which is to come.' The enthusiasm was no longer to be restrained, and loud shouts interrupted the speaker; the people exclaiming as if with one voice, 'Dieu le veult! Dieu le veult!' . . . The news of this council spread to the remotest parts of Europe in an incredibly short space of time. Long before the fleetest horseman could have brought the intelligence, it was known by the people in distant provinces; a fact which was considered as nothing less than supernatural. But the subject was in everybody's mouth, and the minds of men were prepared for the result. The enthusiastic merely asserted what they wished, and the event tallied with their prediction."—C. Mackay, *Memoirs of Extraordinary Popular Delusions: The Crusades*, (v. 2).

ALSO IN: H. H. Milman, *Hist. of Latin Christianity*, bk. 7, ch. 6.

A. D. 1094-1095.—Peter the Hermit and his appeal.—"About twenty years after the conquest of Jerusalem by the Turks, the holy sepulchre was visited by an hermit of the name of Peter, a native of Amiens, in the province of Picardy in France. His resentment and sympathy were excited by his own injuries, and the oppression of the Christian name; he mingled his tears with those of the patriarch, and earnestly inquired, if no hopes of relief could be entertained from the Greek emperors of the East. The patriarch exposed the vices and weakness of the successors of Constantine. 'I will rouse,' exclaimed the hermit, 'the martial nations of Europe in your cause;' and Europe was obedient to the call of the hermit. The astonished patriarch dismissed him with epistles of credit and complaint, and no sooner did he land at Bari, than Peter hastened to kiss the feet of the Roman pontiff. His stature was small, his appearance contemptible; but his eye was keen and lively, and he possessed that vehemence of speech which seldom fails to impart the persuasion of the soul. He was born of a gentleman's family (for we must now adopt a modern idiom), and his military service was under the neighbouring counts of Boulogne, the heroes of the first crusade. Invigorated by the approbation of the pontiff, this zealous missionary traversed, with speed and success, the provinces of Italy and France. His diet was abstemious, his prayers long and fervent, and the alms which he received with one hand, he distributed with the other; his head was bare, his feet naked, his meagre body was wrapt in a coarse garment; he bore and displayed a weighty crucifix; and the ass on which he rode was sanctified in the public eye by the service of the man of God. He preached to innumerable crowds in the churches, the streets, and the highways. . . . When he painted the sufferings of the natives and pilgrims of Palestine, every heart was melted to compassion; every breast glowed with indignation, when he challenged the warriors of the age to defend their brethren and rescue their Saviour: his ignorance of art and language was compensated by sighs and tears, and ejaculations; and Peter supplied the deficiency of reason by loud and frequent appeals to Christ and his Mother, to the saints and angels of paradise, with whom he had personally conversed. The most perfect orator of Athens might have envied the success

of his eloquence; the rustic enthusiast inspired the passions which he felt, and Christendom expected with impatience the counsels and decrees of the supreme pontiff."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 58.

ALSO IN: J. C. Robertson, *Hist. of the Christian Church*, bk. 6, ch. 4 (v. 4).

A. D. 1096-1099.—The First Great Movement.—The first army of Crusaders to set out on the long march to Jerusalem was a mob of men, women and children which had not patience to wait for the organized movement of the military leaders. They gathered in vast numbers on the banks of the Moselle and the Meuse, in the spring of 1096, with Peter the Hermit for their chosen chief. There were nine knights, only, in the swarm, and but few who had horses to ride, or efficient arms to bear, or provisions to feed upon. Knowing nothing, and therefore fearing nothing, they marched away, through France, Germany, Hungary and beyond, begging food where they could and subsisting by pillage when it needed. A knight called Walter the Penniless led the van, and Peter followed, with his second division, by a somewhat different route. Walter escaped serious trouble until he reached the country of the savage Bulgarians. Peter's senseless mob provoked the just wrath of the Hungarians by storming the small city of Semlin and slaying 4,000 of its inhabitants. The route of both was lined with the bones of thousands who perished of hunger, of exposure, of disease, and by the swords of Hungarians and Bulgarians. A third and a fourth host of like kind followed in their wake, led by a monk, Gotschalk, a priest named Volkmar, and a Count Emicon. These terrorized even more all the countries through which they passed,—especially where Jews were to be hunted and killed,—and were destroyed in Hungary to almost the last man. Peter and Walter reached Constantinople with 100,000 followers, it is said, even yet, after all who had fallen by the way. Still refusing to wait for the better appointed expeditions that were in progress, and still appalling eastern Christendom by their lawless barbarities, they passed into Asia Minor, and their miserable career soon came to an end. Attacking the Turks in the city of Nicæa,—which had become the capital of the Seljouk sultan of Roum,—they were beaten, routed, scattered, slaughtered, until barely 3,000 of the great host escaped. "Of the first Crusaders," says Gibbon, "300,000 had already perished before a single city was rescued from the infidels,—before their graver and more noble brethren had completed the preparations of their enterprise." Meantime the knights and princes of the crusade had gathered their armies and were now (in the summer of 1096) beginning to move eastward, by different routes. Not one of the greater sovereigns of Europe had enlisted in the undertaking. The chiefs of one armament were Godfrey de Bouillon, duke of the Lower Lorraine, or Brabant; his brothers, Eustace, count of Boulogne, and Baldwin; his cousin, Baldwin de Bourg, with Baldwin, count of Hainaut, Dudon de Contz, and other knights celebrated in the "Jerusalem Delivered" of Tasso. This expedition followed nearly the route of Peter the Hermit, through Hungary and Bulgaria, giving hostages for its orderly conduct and winning the good-will of those coun-

tries, even maddened as they were by the fore-going mobs. Another larger following from France was led by Hugh, count of Vermandois, brother of the king of France; Robert, duke of Normandy, eldest son of William the Conqueror; Stephen, count of Blois, the Conqueror's son-in-law, and Robert, count of Flanders. These took the road into Italy, and to Bari, whence, after spending the winter, waiting for favorable weather, they were transported by ships to Greece, and pursued their march to Constantinople. They were followed by a contingent from southern Italy, under Bohemond, the Norman prince of Tarentum, son of Robert Guiscard, and his knightly cousin, Tancred. A fourth army, gathered in southern France by count Raymond of Toulouse and Bishop Adhemar, the appointed legate and representative of the pope, chose still another route, through Lombardy, Dalmatia and Macedonia, into Thrace. On passing through the territories of the Byzantine emperor (Alexius I.), all the crusaders experienced his distrust, his duplicity, and his cautious ill-will—which, under the circumstances were natural enough. Alexius managed so well that he extorted from each of the princes an acknowledgment of his rights of sovereignty over the region of their expected conquests, with an oath of fealty and homage, and he pushed them across the Bosphorus so adroitly that no two had the opportunity to unite their forces under the walls of Constantinople. Their first undertaking in Asia [May and June, A. D. 1097] was the siege of Nicæa, and they beleaguered it with an army which Gibbon believes to have been never exceeded within the compass of a single camp. Here, again, they were mastered by the cunning diplomacy of the Greek emperor. When the sultan of Roum yielded his capital, he was persuaded to surrender it to Alexius, and the imperial banner protected it from the rage of the discomfited crusaders. But they revenged themselves on the Turk at Dorylaeum, where he attacked them during their subsequent march, and where he suffered a defeat which ended all fighting in Asia Minor. Baldwin, brother of Godfrey, now improved his opportunities by stealing away from the army, with a few hundred knights and men, to make conquests on his own account; with such success that he won the city of Edessa, with a sweep of country around it, and founded a principality which subsisted for half a century. The rest fared on, meeting no opposition from infidel swords, but sickening and dying by thousands, from heat and from want of water and food, until they came to Antioch. There, the Turkish emir in command, with a stout garrison of horse and foot, had prepared for a stubborn defence, and he held the besiegers at bay for seven months, while they starved in their ill-supplied camps. The city was delivered to them by a traitor, at length, but prince Bohemond, the crafty Norman, secured the benefit of the treason to himself, and forced his compatriots to concede to him the sovereignty of Antioch. The sufferings of the crusaders did not end with the taking of the city. They brought famine and pestilence upon themselves anew by their greedy and sensual indulgence, and they were soon under siege in their own turn, by a great army which the Turks had brought against them. Death and desertion were in rivalry to thin their wasted ranks. The

survivors were in gloom and despair, when an opportune miracle occurred to excite them afresh. A lance, which visions and apparitions certified to be the very spear that pierced the Redeemer's side, was found buried in a church at Antioch. Under the stimulus of this amazing discovery they sallied from the town and dispersed the great army of the Turks in utter rout. Still the quarrels of the leaders went on, and ten months more were consumed before the remains of the Latin army advanced to Jerusalem. It was June, A. D. 1099, when they saw the Holy City and assailed its formidable walls. Their number was now reduced to 40,000, but their devotion and their ardor rose to frenzy, and after a siege of little more than a month they forced an entrance by storm. Then they spared neither age nor sex until they had killed all who denied the Savior of mankind—the Prince of Peace.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 58.

A. D. 1101-1102.—The after-wave of the first movement.—"The tales of victory brought home by the pilgrims excited the most extravagant expectations in the minds of their auditors, and nothing was deemed capable of resisting European valour. The pope called upon all who had taken the cross to perform their vow, the emperor Henry IV. had the crusade preached, in order to gain favour with the clergy and laity. Many princes now resolved to visit in person the new empire founded in the East. Three great armies assembled: the first in Italy under the archbishop of Milan, and the two counts of Blandrate; the second in France under Hugh the Great and Stephen of Blois [who had deserted their comrades of the first expedition at Antioch, and] whom shame and remorse urged to perform their vow, William, duke of Guienne and count of Poitou, who mortgaged his territory to William Rufus of England to procure funds, the count of Nevers, the duke of Burgundy, the bishops of Laon and Soissons; the third in Germany, under the bishop of Saltzburg, the aged duke Welf of Bavaria, Conrad the master of the horse to the emperor, and many other knights and nobles. Ida also, the margravine of Austria, declared her resolution to share the toils and dangers of the way, and pay her vows at the tomb of Christ. Vast numbers of women of all ranks accompanied all these armies,—nay, in that of the duke of Guienne, who was inferior to none in valour, but united to it the qualities of a troubadour and glee-man, there appeared whole troops of young women. The Italian pilgrims were the first to arrive at Constantinople. They set out early in the spring, and took their way through Carinthia, Hungary, and Bulgaria. Though the excesses committed by them were great, the emperor gave them a kind reception, and the most prudent and friendly advice respecting their future progress. While they abode at Constantinople, Conrad and the count of Blois, and the duke of Burgundy, arrived, and at Whitsuntide they all passed over, and encamped at Nicomedia." With ignorant fatu

ity, and against all experienced advice, the new Crusaders resolved to direct their march to Bagdad and to overthrow the caliphate. The first body which advanced was cut to pieces by the Turks on the banks of the Halys, and only a few thousands, out of more than one hundred thousand, are said to have made their escape by desperate flight. The second and third armies were met successively by the victorious Moslems, before they had advanced so far, and were even more completely annihilated. The latter body contained, according to the chroniclers of the time, 150,000 pilgrims, of whom scarcely one thousand were saved from slavery or death. The men fell under the swords of the Turks; the women and girls, in great numbers, finished out their days in the harems of the East. Out of the wreck of the three vast armaments a slender column of 10,000 men was got together after some weeks at Antioch and led to Jerusalem (A. D. 1102). Most of these perished in subsequent battles, and very few ever saw Europe again. "Such was the fruitless termination of this second great movement of the West, in which perhaps a third of a million of pilgrims left their homes, never to revisit them."—T. Keightley, *The Crusaders*, ch. 2.

A. D. 1104-1111.—Conquest of maritime cities of Syria and Palestine.—Destruction of the Library of Tripoli.—"The prosperity and the safety of Jerusalem appeared closely connected with the conquest of the maritime cities of Syria and Palestine; it being by them alone that it could receive succour, or establish prompt and easy communications with the West. The maritime nations of Europe were interested in seconding, in this instance, the enterprises of the king of Jerusalem. . . . From the period of the first crusades, the Pisans and the Genoese had constantly sent vessels to the seas of the East; and their fleets had aided the Christians in several expeditions against the Mussulmans. A Genoese fleet had just arrived in the seas of Syria when Baldwin undertook the siege of Ptolemais [Acre]. The Genoese were invited to assist in this conquest; but as religion was not the principle to bring them into action, they required, in return for their assistance and their labour, that they should have a third of the booty; they likewise stipulated to have a separate church for themselves, and a national factory and tribunal in the conquered city. Ptolemais was besieged by land and sea, and after a bloody resistance of twenty days, the inhabitants and the garrison proposed to surrender, and implored the clemency of the conquerors. The city opened its gates to the Christians, and the inhabitants prepared to depart, taking with them whatever they deemed most valuable; but the Genoese, at the sight of such rich booty, paid no respect to the capitulation, and massacred without pity a disarmed and defenceless people. . . . In consequence of this victory, several places which the Egyptians still held on the coasts of Syria fell into the hands of the Christians." Among those was the city of Tripoli. "Raymond, Count de St. Gilles and of Thoulouse, one of the companions of Godfrey, after having wandered for a long time about Asia, had died before this place, of which he had commenced the siege. In memory of his exploits in the first crusade, the rich territory of Tripoli

was created a county, and became the inheritance of his family. This territory was celebrated for its productions. . . . A library established in this city, and celebrated through all the East, contained the monuments of the ancient literature of the Persians, the Arabians, the Egyptians, and the Greeks. A hundred copyists were there constantly employed in transcribing manuscripts. . . . After the taking of the city, a priest attached to Count Bernard de St. Gilles, entered the room in which were collected a vast number of copies of the Koran, and as he declared the library of Tripoli contained only the impious books of Mahomet, it was given up to the flames. . . . Bibles, situated on the smiling and fertile shores of Phoenicia, Sarepta, where St. Jerome saw still in his day the tower of Isaiah; and Berytus, famous in the early days of the church for its school of eloquence, shared the fate of Tripoli, and became baronies bestowed upon Christian knights. After these conquests, the Pisans, the Genoese, and several warriors who had followed Baldwin in his expeditions, returned into Europe; and the king of Jerusalem, abandoned by these useful allies, was obliged to employ the forces which remained in repulsing the invasions of the Saracens."—J. F. Michaud, *Hist. of the Crusades*, v. 1, bk. 5.

A. D. 1147-1149.—The Second Great Movement.—During the reign of Fulk, the fourth king of Jerusalem, the Latin power in Palestine and its neighboring territories began to be seriously shaken by a vigorous Turkish prince named Zenghi, on whom the sultan Mahmoud had conferred the government of all the country west of the Tigris. It was the first time since the coming of the Christians of the West that the whole strength of Islam in that region had been so nearly gathered into one strong hand, to be used against them, and they felt the effect speedily, being themselves weakened by many quarrels. In 1143 King Fulk died, leaving the crown to a young son, Baldwin III.,—a boy of thirteen, whose mother governed in his name. The next year Zenghi captured the important city of Edessa, and consternation was produced by his successes. Europe was then appealed to for help against the advancing Turk, and the call from Jerusalem was taken up by St. Bernard of Clairvaux, the irresistible enthusiast, whose influence accomplished, in his time, whatever he willed to have done. Just half a century after Peter the Hermit, St. Bernard preached a Second Crusade, and with almost equal effect, notwithstanding the better knowledge now possessed of all the hardships and perils of the expedition. This time, royalty took the lead. King Conrad of Germany commanded a great army from that country, and another host followed King Louis VII. from France. "Both armies marched down the Danube, to Constantinople, in the summer of 1147. At the same moment King Roger [of Naples], with his fleet, attacked, not the Turks, but the Greek seaport towns of the Morea. Manuel [the Byzantine emperor] thereupon, convinced that the large armies were designed for the destruction of his empire in the first place, with the greatest exertions, got together troops from all his provinces, and entered into a half-alliance with the Turks of Asia Minor. The mischief and ill-feeling was increased by the lawless conduct of the German hordes; the Greek troops attacked them more

than once; whereupon numerous voices were raised in Louis's headquarters to demand open war against the faithless Greeks. The kings were fully agreed not to permit this, but on arriving in Constantinople they completely fell out, for, while Louis made no secret of his warm friendship for Roger, Conrad promised the Emperor of Constantinople to attack the Normans as soon as the Crusade should be ended. This was a bad beginning for a united campaign in the East, and moreover, at every step eastward, new difficulties arose. The German army, broken up into several detachments, and led without ability or prudence, was attacked in Asia Minor by the Emir of Iconium, and cut to pieces, all but a few hundred men. The French, though better appointed, also suffered severe losses in that country, but contrived nevertheless, to reach Antioch with a very considerable force, and from thence might have carried the project which the second Baldwin had conceived in vain, namely, the defence of the northeastern frontier, upon which, especially since Zenki [Zenghi] had made his appearance, the life or death of the Christian states depended. But in vain did Prince Raymond of Antioch try to prevail upon King Louis to take this view, and to attack without delay the most formidable of all their adversaries, Nouredin [son of Zenghi, now dead]. Louis would not hear or do anything till he had seen Jerusalem and prayed at the Holy Sepulchre. . . . In Jerusalem he [King Louis] was welcomed by Queen Melisende (now regent, during her son's minority, after Fulco's death), with praise and gratitude, because he had not taken part in the distant wars of the Prince of Antioch, but had reserved his forces for the defence of the holy city of Jerusalem. It was now resolved to lead the army against Damascus, the only Turkish town whose Emir had always refused to submit to either Zenki or Nouredin. Nevertheless Nouredin instantly collected all his available forces, to succour the besieged town." But he was spared further exertion by the jealous disagreement of the Christians, who began to take thought as to what should be done with Damascus when they took it. The Syrian barons concluded that they would prefer to leave the city in Turkish hands, and by treacherous manœuvres they forced king Louis to raise the siege. "The German king, long since tired of his powerless position, returned home in the autumn of 1148, and Louis, after much pressing, stayed a few months longer, and reached Europe in the following spring. The whole expedition . . . had been wrecked, without honour and without result, by the most wretched personal passions, and the most narrow and selfish policy." —H. Von Sybel, *Hist. and Literature of the Crusades*, ch. 3.—"So ended in utter shame and ignominy the Second Crusade. The event seemed to give the lie to the glowing promises and prophecies of St. Bernard. So vast had been the drain of population to feed this holy war that, in the phrase of an eye-witness, the cities and castles were empty, and scarcely one man was left to seven women; and now it was known that the fathers, the husbands, the sons, or the brothers of these miserable women would see their earthly homes no more. The cry of anguish charged Bernard with the crime of sending them forth on an errand in which they had done absolutely nothing and had reaped only

wretchedness and disgrace. For a time Bernard himself was struck dumb; but he soon remembered that he had spoken with the authority of God and his vicegerent, and that the guilt or failure must lie at the door of the pilgrims."—G. W. Cox, *The Crusades*, ch. 5.

A. D. 1187.—The loss of Jerusalem. See JERUSALEM: A. D. 1149-1187.

A. D. 1188-1192.—The Third Great Movement.—When the news reached Europe that Saladin, the redoubtable new champion of Islam had expelled the Christians and the Cross from Jerusalem, polluting once more the precincts of the Holy Sepulchre, the effect produced was something not easily understood at the present day. If we may believe historians of the time, the pope (Urban III.) died of grief; "Christians forgot all the ills of their own country to weep over Jerusalem. . . . Luxury was banished from cities; injuries were forgotten and alms were given abundantly. Christians slept upon ashes, clothed themselves in haircloth, and expiated their disorderly lives by fasting and mortification. The clergy set the example; the morals of the cloister were reformed, and cardinals, condemning themselves to poverty, promised to repair to the Holy Land, supported on charity by the way. These pious reformatory did not last long; but men's minds were not the less prepared for a new crusade by them, and all Europe was soon roused by the voice of Gregory VIII., who exhorted the faithful to assume the cross and take up arms."—J. F. Michaud, *Hist. of the Crusades*, bk. 7.—"The emperor Frederic Barbarossa and the kings of France and England assumed the cross; and the tardy magnitude of their armaments was anticipated by the maritime states of the Mediterranean and the ocean. The skilful and provident Italians first embarked in the ships of Genoa, Pisa, and Venice. They were speedily followed by the most eager pilgrims of France, Normandy and the Western Isles. The powerful succour of Flanders, Frise, and Denmark filled near a hundred vessels; and the northern warriors were distinguished in the field by a lofty stature and a ponderous battle-axe. Their increasing multitudes could no longer be confined within the walls of Tyre [which the Latins still held], or remain obedient to the voice of Conrad [Marquis of Montferrat, who had taken command of the place and repelled the attacks of Saladin]. They pitied the misfortunes and revered the dignity of Lusignan [the nominal king of Jerusalem, lately captive in Saladin's hands], who was released from prison, perhaps to divide the army of the Franks. He proposed the recovery of Ptolemais, or Acre, thirty miles to the south of Tyre; and the place was first invested [July, 1189] by 2,000 horse and 30,000 foot under his nominal command. I shall not expatiate on the story of this memorable siege, which lasted near two years, and consumed, in a narrow space, the forces of Europe and Asia. . . . At the sound of the holy trumpet the Moslems of Egypt, Syria, Arabia, and the Oriental provinces assembled under the servant of the prophet: his camp was pitched and removed within a few miles of Acre; and he laboured, night and day, for the relief of his brethren and the annoyance of the Franks. . . . In the spring of the second year, the royal fleets of France and England cast anchor in the bay of Acre, and the siege was more vigorously prosecuted by the

youthful emulation of the two kings, Philip Augustus and Richard Plantagenet. After every resource had been tried, and every hope was exhausted, the defenders of Acre submitted to their fate. . . . By the conquest of Acre the Latin powers acquired a strong town and a convenient harbour; but the advantage was most dearly purchased. The minister and historian of Saladin computes, from the report of the enemy, that their numbers, at different periods, amounted to 500,000 or 600,000; that more than 100,000 Christians were slain; that a far greater number was lost by disease or shipwreck." On the reduction of Acre, king Philip Augustus returned to France, leaving only 500 knights and 10,000 men behind him. Meantime, the old emperor, Frederick Barbarossa, coming by the landward route, through the country of the Greeks and Asia Minor, with a well-trained army of 20,000 knights and 50,000 men on foot, had perished by the way, drowned in a little Cilician torrent, and only 5,000 of his troops had reached the camp at Acre. Old as he was, (he was seventy when he took the cross) Barbarossa might have changed the event of the Crusade if he had reached the scene of conflict; for he had brains with his valor and character with his ferocity, which Richard Cœur de Lion had not. The latter remained another year in the Holy Land; recovered Cæsarea and Jaffa; threatened Saladin in Jerusalem seriously, but to no avail; and stirred up more and fiercer quarrels among the Christians than had been customary, even on the soil which was sacred to them. In the end, a treaty was arranged which displeased the more devout on both sides. "It was stipulated that Jerusalem and the holy sepulchre should be open, without tribute or vexation, to the pilgrimage of the Latin Christians; that, after the demolition of Ascalon, they should inclusively possess the sea-coast from Jaffa to Tyre; that the count of Tripoli and the prince of Antioch should be comprised in the truce; and that, during three years and three months, all hostilities should cease. . . . Richard embarked for Europe, to seek a long captivity and a premature grave; and the space of a few months concluded the life and glories of Saladin."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 59.—"A halo of false glory surrounds the Third Crusade from the associations which connect it with the lion-hearted king of England. The exploits of Richard I. have stirred to enthusiasm the dulllest of chroniclers, have furnished themes for jubilant eulogies, and have shed over his life that glamour which cheats even sober-minded men when they read the story of his prototype Achilles in the tale of Troy. . . . When we turn from the picture to the reality, we shall see in this Third Crusade an enterprise in which the fiery zeal which does something towards redeeming the savage brutalities of Godfrey and the first crusaders is displaced by base and sordid greed, by intrigues utterly of the earth earthy, by wanton crimes from which we might well suppose that the sun would hide away its face; and in the leaders of this enterprise we shall see men in whom morally there is scarcely a single quality to relieve the monotonous blackness of their infamy; in whom, strategically, a very little generalship comes to the aid of a blind brute force."—G. W. Cox, *The Crusades*, ch. 7.

ALSO IN: Mrs. W. Busk, *Mediæval Popes, Emperors, Kings and Crusaders*, bk. 2, ch. 12, and bk. 3, ch. 1-2.

A. D. 1196-1197.—The Fourth Expedition.—A crusading expedition of German barons and their followers, which went to the Holy Land, by way of Italy, in 1196, is generally counted as the Fourth Crusade, though some writers look upon it as a movement supplementary to the Third Crusade. The Germans, who numbered some 40,000, do not seem to have been welcomed by the Christians of Palestine. The latter preferred to maintain the state of peace then prevailing; but the new crusaders forced hostilities at once. Saladin was dead; his brother Saphadin accepted the challenge to war with prompt vigor and struck the first hard blow, taking Jaffa, with great slaughter, and demolishing its fortifications. But Saphadin was presently defeated in a battle fought between Tyre and Sidon, and Jaffa was recovered, together with other towns and most of the coast. But, a little later, the Germans suffered, in their turn, a most demoralizing reverse at the castle of Thoron, which they besieged, and were further disturbed, in the midst of their depression, by news of the death of their emperor, Henry VI. A great part of them, thereupon, returned home. Those who remained, or many of them, occupied Jaffa, where they were attacked, a few months later, and cut to pieces.—G. W. Cox, *The Crusades*, ch. 8.

A. D. 1201-1203.—The Fifth Movement.—Treachery of the Venetians.—Conquest of Constantinople.—"Every traveller returning from Syria brought a prayer for immediate help from the survivors of the Third Crusade. It was necessary to act at once if any portion even of the wreck of the kingdom of Jerusalem were to be saved. Innocent the Third, and some, at least, of the statesmen of the West were fully alive to the progress which Islam had made since the departure of the Western kings. In 1197, however, after five years of weary waiting, the time seemed opportune for striking a new blow for Christendom. Saladin, the great Sultan, had died in 1193, and his two sons were already quarreling about the partition of his empire. The contending divisions of the Arab Moslems were at this moment each bidding for the support of the Christians of Syria. The other great race of Mahometans which had threatened Europe, the Seljukian Turks, had made a halt in their progress through Asia Minor. . . . Other special circumstances which rendered the moment favourable for a new crusade, combined with the profound conviction of the statesmen of the West of the danger to Christendom from the progress of Islam, urged Western Europe to take part in the new enterprise. The reigning Pope, Innocent III., was the great moving spirit of the Fourth Crusade." The popular preacher of the Crusade was found in an ignorant priest named Fulk, of Neuilly, whose success in kindling public enthusiasm was almost equal to that of Peter the Hermit. Vast numbers took the cross, with Theobald, count of Champagne, Louis, count of Blois and Chartres, Simon de Montfort, Walter of Brienne, Baldwin, count of Flanders, Hugh of St. Pol, Geoffrey de Villehardouin, marshal of Champagne and future historian of the Crusade, and many other prominent knights and princes among the leaders. The young count of Champagne was the chosen chief; but he sickened and died and his place was taken by Boniface, marquis of Montferrat. It was the decision of the leaders

that the expedition should be directed in the first instance against the Moslem power in Egypt, and that it should be conveyed to the attack of Egypt by sea. Venice, alone, seemed to be able to furnish ships, sailors and supplies for so great a movement, and a contract with Venice for the service was concluded in the spring of 1201. But Venice was mercenary, unscrupulous and treacherous, caring for nothing but commercial gains. Before the crusaders could gather at her port for embarkation, she had betrayed them to the Moslems. By a secret treaty with the sultan of Egypt, the fact of which is coming more and more conclusively to light, she had undertaken to frustrate the Crusade, and to receive important commercial privileges at Alexandria as compensation for her treachery. When, therefore, in the early summer of 1202, the army of the Crusade was collected at Venice to take ship, it encountered difficulties, discouragements and ill-treatments which thickened daily. The number assembled was not equal to expectation. Some had gone by sea from Flanders; some by other routes. But Venice had provided transport for the whole, and inflexibly demanded pay for the whole. The money in hand was not equal to this claim. The summer was lost in disputes and attempted compromises. Many of the crusaders withdrew in disgust and went home. At length, in defiance of the censures of the pope and of the bitter opposition of many leaders and followers of the expedition, there was a bargain struck, by the terms of which the crusaders were to assist the Venetians in taking and plundering the Christian city of Zara, a dreaded commercial rival on the Dalmatian coast of the Adriatic, belonging to the king of Hungary, himself one of the promoters of the very crusade which was now to be turned against him. The infamous compact was carried out. Zara was taken, and in the end it was totally destroyed by the Venetians. In the meantime, the doomed city was occupied by the crusading army through the winter, while a still more perfidious plot was being formed. Old Dandolo, the blind doge of Venice, was the master spirit of it. He was helped by the influence of Philip, one of the two rivals then fighting for the imperial crown in Germany and Italy. Philip had married a daughter of Isaac II. (Angelos), made emperor at Constantinople on the fall of the dynasty of Comnenus, and that feeble prince had lately been dethroned by his brother. The son and heir of Isaac, named Alexius, had escaped from Constantinople and had made his way to Philip imploring help. Either Philip conceived the idea, or it was suggested to him, that the armament of the Crusade might be employed to place the young Alexius on the throne of his father. To the Venetians the scheme was more than acceptable. It would frustrate the Crusade, which they had pledged themselves to the sultan of Egypt to accomplish; it would satisfy their ill-will towards the Byzantines, and, more important than all else, it would give them an opportunity to secure immeasurable advantages over their rivals in the great trade which Constantinople held at command. The marquis of Montferrat, commander of the Crusade, had some grievances of his own and some ambitions of his own, which made him favorable to the new project, and he was easily won to it. The three influences thus combined — those of Philip, of Dandolo, and of Montferrat —

overcame all opposition. Some who opposed were bribed, some were intimidated, some were deluded by promises, some deserted the ranks. Pope Innocent remonstrated, appealed and threatened in vain. The pilgrim host, "changed from a crusading army into a filibustering expedition," set sail from Zara in the spring of the year 1203, and was landed, the following June, not on the shores of Egypt or Syria, but under the walls of Constantinople. Its conquest, pillage and brutally destructive treatment of the great city are described in another place. — E. Pears, *The Fall of Constantinople*, ch. 8-13.

A. D. 1212.—The Children's Crusade.—"The religious wars fostered and promoted vice; and the failure of army after army was looked on as a clear manifestation of God's wrath against the sins of the camp. This feeling was roused to its highest pitch when, in the year 1212, certain priests—Nicolas was the name of one of these mischievous madmen—went about France and Germany calling on the children to perform what the fathers, through their wickedness, had been unable to effect, promising that the sea should be dry to enable them to march across; that the Saracens would be miraculously stricken with a panic at the sight of them; that God would, through the hands of children only, whose lives were yet pure, work the recovery of the Cross and the Sepulchre. Thousands—it is said fifty thousand—children of both sexes responded to the call. They listened to the impassioned preaching of the monks, believed their lying miracles, their visions, their portents, their references to the Scriptures, and, in spite of all that their parents could do, rushed to take the Cross, boys and girls together, and streamed along the roads which led to Marseilles and Genoa, singing hymns, waving branches, replying to those who asked whither they were going, 'We go to Jerusalem to deliver the Holy Sepulchre,' and shouting their rallying cry, 'Lord Jesus, give us back thy Holy Cross.' They admitted whoever came, provided he took the Cross; the infection spread, and the children could not be restrained from joining them in the towns and villages along their route. Their miserable parents put them in prison; they escaped; they forbade them to go; the children went in spite of prohibition. They had no money, no provisions, no leaders; but the charity of the towns they passed through supported them. At their rear streamed the usual tail of camp followers. . . . There were two main bodies. One of these directed its way through Germany, across the Alps, to Genoa. On the road they were robbed of all the gifts which had been presented them; they were exposed to heat and want, and very many either died on the march or wandered away from the road and so became lost to sight; when they reached Italy they dispersed about the country, seeking food, were stripped by the villagers, and in some cases were reduced to slavery. Only seven thousand out of

their number arrived at Genoa. Here they stayed for some days. They looked down upon the Mediterranean, hoping that its bright waves would divide to let them pass. But they did not; there was no miracle wrought in their favour; a few of noble birth were received among the Genoese families, and have given rise to distinguished houses of Genoa; among them is the house of Vivaldi. The rest, disappointed and disheartened, made their way back again, and got home at length, the girls with the loss of their virtue, the boys with the loss of their belief, all barefooted and in rags, laughed at by the towns they went through, and wondering why they had ever gone at all. This was the end of the German army. That of the French was not so fortunate, for none of them ever got back again at all. When they arrived at Marseilles, thinned probably by the same causes as those which had dispersed the Germans, they found, like their brethren, that the sea did not open a path for them, as had been promised. Perhaps some were disheartened and went home again. But fortune appeared to favour them. There were two worthy merchants at Marseilles, named Hugh Ferreus, and William Porcus, Iron Hugh and Pig William, who traded with the East, and had in port seven ships, in which they proposed to convey the children to Palestine. With a noble generosity they offered to take them for nothing, all for love of religion, and out of the pure kindness of their hearts. Of course this offer was accepted with joy, and the seven vessels laden with the happy little Crusaders, singing their hymns and flying their banners, sailed out from Marseilles, bound for the East, accompanied by William the Good and Hugh the Pious. It was not known to the children, of course, that the chief trade of these merchants was the lucrative business of kidnapping Christian children for the Alexandrian market. It was so, however, and these respectable tradesmen had never before made so splendid a coup. Unfortunately, off the Island of St. Peter, they encountered bad weather, and two ships went down with all on board. What must have been the feelings of the philanthropists, Pig William and Iron Hugh, at this misfortune? They got, however, five ships safely to Alexandria, and sold all their cargo, the Sultan of Cairo buying forty of the boys, whom he brought up carefully and apart, intending them, doubtless, for his best soldiers. A dozen refusing to change their faith were martyred. None of the rest ever came back. Nobody in Europe seems to have taken much notice of this extraordinary episode."—W. Besant and E. H. Palmer, *Jerusalem*, ch. 18.

A. D. 1216-1229.—The Sixth Movement.—Frederic II. in Jerusalem.—For six years after the betrayal of the vows of the crusaders of 1202-1204—who sacked Constantinople instead of rescuing Jerusalem—the Christians of Palestine were protected by a truce with Saphadin, the brother of Saladin, who had succeeded the latter in power. Hostilities were then rashly provoked by the always foolish Latins, and they soon found themselves reduced to sore straits, calling upon Europe for fresh help. Pope Innocent III.

did not scruple to second their appeal. A new crusade was preached with great earnestness, and a general Council of the Church—the Fourth of Lateran—was convened for the stimulation of it. "The Fifth Crusade [or the Sixth, as more commonly numbered], the result of this resolution, was divided in the sequel into three maritime expeditions: the first [A. D. 1216] consisting principally of Hungarians under their king, Andrew; the second [A. D. 1218] composed of Germans, Italians, French and English nobles and their followers; and the third [A. D. 1228] led by the Emperor Frederic II. in person. . . . Though the King of Hungary was attended by the flower of a nation which, before its conversion to Christianity, had been the scourge and terror of Western Europe, the arms of that monarch, even aided by the junction of numerous German crusaders under the dukes of Austria and Bavaria, performed nothing worthy of notice: and after a single campaign in Palestine, in which the Mussulman territories were ineffectually ravaged, the fickle Andrew deserted the cause and returned with his forces to Europe. His defection did not prevent the duke of Austria, with the German crusaders, from remaining, in concert with the King of Jerusalem, his barons, and the knights of the three religious orders, for the defence of Palestine; and, in the following year, the constancy of these faithful champions of the Cross was rewarded by the arrival of numerous reinforcements from Germany. . . . It was resolved to change the scene of warfare from the narrow limits of the Syrian shore to the coast of Egypt, . . . and the situation of Damietta, at the mouth of the Nile, pointed out that city as the first object of attack." After a siege of seventeen months, during which both the besieged and the besiegers suffered horribly, from famine and from pestilence, Damietta was taken (A. D. 1219). Nine-tenths of its population of 80,000 had perished. "Both during the siege and after the capture of Damietta, the invasion of Egypt had filled the infidels with consternation; and the alarm which was betrayed in their counsels proved that the crusaders, in choosing that country for the theatre of operations, had assailed the Mussulman power in its most vital and vulnerable point. Of the two sons of Saphadin, Coradinus and Camel, who were now uneasily seated on the thrones of Damascus and Cairo, the former, in despair of preserving Jerusalem, had already demolished its fortifications; and the brothers agreed in repeatedly offering the cession of the holy city and of all Palestine to the Christians, upon the single condition of their evacuating Egypt. Every object which had been ineffectually proposed in repeated Crusades, since the fatal battle of Tiberias, might now have been gloriously obtained by the acceptance of these terms, and the King of Jerusalem, the French and English leaders, and the Teutonic knights, all eagerly desired to embrace the offer of the Sultans. But the obstinate ambition and cupidity of the surviving papal legate, Cardinal Pelagius, of the Italian chieftains, and of the knights of the other two religious orders, by holding out the rich prospect of the conquest and plunder of Egypt, overruled every wise and temperate argument in the Christian councils, and produced a rejection of all compromise with the infidels. After a winter of luxurious inaction, the legate led the

crusading host from Damietta toward Cairo (A. D. 1220)." The expedition was as disastrous in its result as it was imbecile in its leadership. The whole army, caught by the rising of the Nile, was placed in so helpless a situation that it was glad to purchase escape by the surrender of Damietta and the evacuation of Egypt. The retreat of the greater part of these crusaders did not end until they had reached home. Pope Honorius III. (who had succeeded Innocent III. in 1216) strove to shift responsibility for the failure from his wretched legate to the Emperor Frederic II., who had thus far evaded the fulfilment of his crusading promises and vows, being occupied in struggles with the papacy. At length, in 1228, Frederic embarked for Palestine with a small force, pursued by the maledictions of the pope, who denounced him for daring to assume the Cross while under the ban of the church, as much as he had denounced him before for neglecting it. But the free-thinking Hohenstauffen cared little, apparently, and went his way, shunned scrupulously by all pious souls, including the knights of Palestine, except those of the Teutonic order. With the help of the latter he occupied and refortified Jaffa and succeeded in concluding a treaty with the Sultan which restored Jerusalem to the Christians, reserving certain rights to the Mahometans; giving up likewise Bethlehem, Nazareth and some other places to the Christians, and securing peace for ten years. Frederic had married, a few years before, for his second empress, Yolande, daughter and heiress of the titular king of Jerusalem, John de Brienne. With the hand of this princess, he received from her father a solemn transfer of all his rights to that shadowy throne. He now claimed those rights, and, entering Jerusalem, with the Teutonic knights (A. D. 1229), he crowned himself its king. The patriarch, the Templars and the Hospitallers refused to take part in the ceremony; the pope denounced Frederic's advantageous treaty as soon as he had news of it, and all that it gained for the Christians of Palestine was thrown away by them as speedily as possible.—Major Procter, *Hist. of the Crusades*, ch. 5, sect. 2.—"No Crusader, since Godfrey de Bouillon, had effected so much as Frederick the Second. What would he not have obtained, had the Pope, the Patriarch and the Orders given him their hearty cooperation?"—T. L. Kington, *Hist. of Frederick II.*, ch. 8.

A. D. 1248-1254.—The Seventh Movement.—Expedition of Saint Louis to Egypt.—The Seventh Crusade was undertaken, with little aid from other countries, by the devout and wonderfully Christian-like young king of France, Louis IX., afterwards canonized, and known in history as St. Louis. "He carried it out with a picked army, furnished by the feudal chivalry and by the religious and military orders dedicated to the service of the Holy Land. The Isle of Cyprus was the trysting-place appointed for all the forces of the expedition. Louis arrived there on the 12th of September, 1248, and reckoned upon remaining there only a few days; for it was Egypt that he was in a hurry to reach.

The Christian world was at that time of opinion that, to deliver the Holy Land, it was necessary first of all to strike a blow at Islamism in Egypt, wherein its chief strength resided. But scarcely had the crusaders formed a junction in Cyprus, when the vices of the expedition and the weaknesses of its chief began to be manifest. Louis, unshakable in his religious zeal, was wanting in clear ideas and fixed resolves as to the carrying out of his design. . . . He did not succeed in winning a majority in the council of chiefs over to his opinion as to the necessity for a speedy departure for Egypt; it was decided to pass the winter in Cyprus. . . . At last a start was made from Cyprus in May, 1249, and, in spite of violent gales of wind which dispersed a large number of vessels, they arrived on the 4th of June before Damietta. . . . Having become masters of Damietta, St. Louis and the crusaders committed the same fault there as in the Isle of Cyprus: they halted there for an indefinite time. They were expecting fresh crusaders; and they spent the time of expectation in quarreling over the partition of the booty taken in the city. They made away with it, they wasted it blindly. . . . Louis saw and deplored these irregularities, without being in a condition to stop them. At length, on the 20th of November, 1249, after more than five months' inactivity at Damietta, the crusaders put themselves once more in motion, with the determination of marching upon Babylon, that outskirt of Cairo, now called Old Cairo, which the greater part of them, in their ignorance, mistook for the real Babylon, and where they flattered themselves they would find immense riches, and avenge the olden sufferings of the Hebrew captives. The Mussulmans had found time to recover from their first fright, and to organize, at all points, a vigorous resistance. On the 8th of February, 1250, a battle took place twenty leagues from Damietta, at Mansourah ('the city of victory'), on the right bank of the Nile. . . . The battle-field was left that day to the crusaders; but they were not allowed to occupy it as conquerors, for, three days afterwards, on the 11th of February, 1250, the camp of St. Louis was assailed by clouds of Saracens, horse and foot, Mamelukes and Bedouins. All surprise had vanished, the Mussulmans measured at a glance the numbers of the Christians, and attacked them in full assurance of success, whatever heroism they might display; and the crusaders themselves indulged in no more self-illusion, and thought only of defending themselves. Lack of provisions and sickness soon rendered defence almost as impossible as attack; every day saw the Christian camp more and more encumbered with the famine-stricken, the dying, and the dead; and the necessity for retreating became evident." An attempt to negotiate with the enemy failed, because they insisted on the surrender of the king as hostage,—which none would concede. "On the 5th of April, 1250, the crusaders decided upon retreating. This was the most deplorable scene of a deplorable drama; and at the same time it was, for the king, an occasion for displaying, in their most sublime and attractive traits, all the virtues of the Christian. Whilst sickness and famine were devastating the camp, Louis made himself visitor, physician and comforter; and his presence and his words exercised upon the worst cases a searching influ-

ence. . . . When the 5th of April, the day fixed for the retreat, had come, Louis himself was ill and much enfeebled. He was urged to go aboard one of the vessels which were to descend the Nile, carrying the wounded and the most suffering; but he refused absolutely, saying, 'I don't separate from my people in the hour of danger.' He remained on land, and when he had to move forward he fainted away. When he came to himself, he was amongst the last to leave the camp. . . . At four leagues distance from the camp it had just left, the rear-guard of the crusaders, harassed by clouds of Saracens, was obliged to halt. Louis could no longer keep on his horse. 'He was put up at a house,' says Joinville, 'and laid, almost dead, upon the lap of a tradeswoman from Paris; and it was believed that he would not last till evening.' The king, in this condition, with the whole wreck of his army,—only 10,000 in number remaining to him,—were taken prisoners. Their release from captivity was purchased a month later by the surrender of Damietta and a ransom-payment of 500,000 livres. They made their way to St. Jean d' Acre, in Palestine, whence many of them returned home. But King Louis, with some of his knights and men-at-arms—how many is not known—stayed yet in the Holy Land for four years, striving and hoping against hope to accomplish something for the deliverance of Jerusalem, and expending "in small works of piety, sympathy, protection, and care for the future of the Christian population in Asia, his time, his strength, his pecuniary resources, and the ardor of a soul which could not remain idly abandoned to sorrowing over great desires unsatisfied." The good and pious but ill-guided king returned to France in the summer of 1254, and was received with great joy.—F. P. Guizot, *Popular Hist. of France*, ch. 17.

A. D. 1252.—The movement of "the Pastors."—On the arrival in France of the news of the disastrous failure of Saint Louis's expedition to Egypt, there occurred an outbreak of fanaticism as insensate as that of the children's crusade of forty years before. It was said to have originated with a Hungarian named Jacob, who began to proclaim that Christ rejected the great ones of the earth from His service, and that the deliverance of the Holy City must be accomplished by the poor and humble. "Shepherds left their flocks, labourers laid down the plough, to follow his footsteps. . . . The name of Pastors was given to these village crusaders. . . . At length, assembled to the number of more than 100,000, these redoubtable pilgrims left Paris and divided themselves into several troops, to repair to the coast, whence they were to embark for the East. The city of Orleans, which happened to be in their passage, became the theatre of frightful disorders. The progress of their enormities at length created serious alarm in the government and the magistracy; orders were sent to the provinces to pursue and disperse these turbulent and seditious bands. The most numerous assemblage of the Pastors was fixed to take place at Bourges, where the 'master of Hungary' [Jacob] was to perform miracles and communicate the will of Heaven. Their arrival in that

city was the signal for murder, fire and pillage. The irritated people took up arms and marched against these disturbers of the public peace; they overtook them between Mortemer and Villeneuve-sur-le-Cher, where, in spite of their numbers, they were routed, and received the punishment due to their brigandages. Jacob had his head cut off by the blow of an axe; many of his companions and disciples met with death on the field of battle, or were consigned to punishment; the remainder took to flight."—J. F. Michaud, *Hist. of the Crusades*, bk. 14.

A. D. 1270-1271.—The last undertakings.—Saint Louis at Tunis.—Prince Edward in Palestine.—"For seven years after his return to France, from 1254 to 1261, Louis seemed to think no more about them [the crusades], and there is nothing to show that he spoke of them even to his most intimate confidants; but, in spite of his apparent calmness, he was living, so far as they were concerned, in a continual ferment of imagination and internal fever, even flattering himself that some favorable circumstance would call him back to his interrupted work. . . . In 1261, Louis held, at Paris, a Parliament, at which, without any talk of a new crusade, measures were taken which revealed an idea of it. . . . In 1263 the crusade was openly preached. . . . All objections, all warnings, all anxieties came to nothing in the face of Louis's fixed idea and pious passion. He started from Paris on the 16th of March, 1270, a sick man almost already, but with soul content, and probably the only one without misgiving in the midst of all his comrades. It was once more at Aigues-Mortes that he went to embark. All was as yet dark and undecided as to the plan of the expedition. . . . Steps were taken at hap-hazard with full trust in Providence and utter forgetfulness that Providence does not absolve men from foresight. . . . It was only in Sardinia, after four days' halt at Cagliari, that Louis announced to the chiefs of the crusade, assembled aboard his ship, the 'Mountjoy,' that he was making for Tunis, and that their Christian work would commence there. The king of Tunis (as he was then called), Mohammed Mostanser, had for some time been talking of his desire to become a Christian, if he could be efficiently protected against the seditious of his subjects. Louis welcomed with transport the prospect of Mussulman conversions. . . . But on the 17th of July, when the fleet arrived before Tunis, the admiral, Florent de Varennes, probably without the king's orders, and with that want of reflection which was conspicuous at each step of the enterprise, immediately took possession of the harbor and of some Tunisian vessels as prize, and sent word to the king 'that he had only to support him and that the disembarkation of the troops might be effected with perfect safety.' Thus war was commenced at the very first moment against the Mussulman prince whom there had been promise of seeing before long a Christian. At the end of a fortnight, after some fight between the Tunisians and the crusaders, so much political and military blindness produced its natural consequences. The re-enforcements promised to Louis by his brother Charles of Anjou, king of Sicily, had not arrived; provisions were falling short; and the heats of an African summer were working

havoc amongst the army with such rapidity that before long there was no time to bury the dead; but they were cast pell-mell into the ditch which surrounded the camp, and the air was tainted thereby. On the 3d of August Louis was attacked by the epidemic fever." On the 25th of August he died. His son and successor, Philip III., held his ground before Tunis until November, when he gladly accepted a payment of money from the Tunisian prince for withdrawing his army. Disaster followed him. A storm destroyed part of his fleet, with 4,000 or 5,000 men, and sunk all the treasure he had received from the Moslems. On the journey home through Italy his wife met with an accident which ended her life and that of her prematurely born child. The young king arrived at Paris, May, 1271, bringing the remains of five of his family for burial at St Denis: his wife, his son, his father, his brother, and his brother-in-law,—all victims of the fatal crusade. While France was thus burying the last of her crusaders, Prince Edward (afterwards King Edward I.) of England, landed in Syria at the head of a few hundred knights and men at arms. Joined by the Templars and Hospitalers, he had an army of 6,000 or 7,000 men, with which he took Nazareth and made there a bloody sacrifice to the memory of the gentle Nazarene. He did nothing more. Being wounded by an assassin, he arranged a truce with the Sultan of Egypt and returned home. His expedition was the last from Europe which strove with the Moslems for the Holy Land. The Christians of Palestine, who still held Acre and Tyre, Sidon and a few other coast cities, were soon afterwards overwhelmed, and the dominion of the Crescent in Syria was undisputed any more by force of arms, though many voices cried vainly against it. The spirit of the Crusades had expired.—F. P. Guizot, *Popular Hist. of France*, ch. 17.

A. D. 1299.—The last campaign of the Templars.—"After the fall of Acre [A. D. 1291] the headquarters of the Templars were established at Limisso in the island of Cyprus, and urgent letters were sent to Europe for succour." In 1295, James de Molay, the head of the English province, became Grand Master, and soon after his arrival in Palestine he entered into an alliance with Ghazan Khan, the Mongol ruler of Persia, who had married a Christian princess of Armenia and was not unfriendly to the Christians, as against the Mamelukes of Egypt, with whom he was at war. The Mongol Khan invited the Templars to join him in an expedition against the Sultan of Egypt, and they did so in the spring of 1299, at Antioch. "An army of 30,000 men was placed by the Mogul emperor under the command of the Grand Master, and the combined forces moved up the valley of the Orontes towards Damascus. In a great battle fought at Hems, the troops of the sultans of Damascus and Egypt were entirely defeated and pursued with great slaughter until nightfall. Aleppo, Hems, Damascus, and all the principal cities, surrendered to the victorious arms of the Moguls, and the Templars once again entered Jerusalem in triumph, visited the Holy Sepulchre

and celebrated Easter on Mount Zion." The khan sent ambassadors to Europe, offering the possession of Palestine to the Christian powers if they would give him their alliance and support, but none responded to the call. Ghazan Khan fell ill and withdrew from Syria; the Templars retreated to Cyprus once more and their military career, as the champions of the Cross, was at an end.—C. G. Addison, *The Knights Templars*, ch. 6.

ALSO IN: H. H. Howarth, *Hist. of the Mongols*, pt. 3, ch. 8.

Effects and consequences of the Crusades in Europe.—"The principle of the crusades was a savage fanaticism; and the most important effects were analogous to the cause. Each pilgrim was ambitious to return with his sacred spoils, the relics of Greece and Palestine; and each relic was preceded and followed by a train of miracles and visions. The belief of the Catholics was corrupted by new legends, their practice by new superstitions; and the establishment of the inquisition, the mendicant orders of monks and friars, the last abuse of indulgences, and the final progress of idolatry, flowed from the baleful fountain of the holy war. The active spirit of the Latins preyed on the vitals of their reason and religion; and if the ninth and tenth centuries were the times of darkness, the thirteenth and fourteenth were the age of absurdity and fable. . . . Some philosophers have applauded the propitious influence of these holy wars, which appear to me to have checked rather than forwarded the maturity of Europe."

—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 61.—"The crusades may be considered as material pilgrimages on an enormous scale, and their influence upon general morality seems to have been altogether pernicious. Those who served under the cross would not indeed have lived very virtuously at home; but the confidence in their own merits which the principle of such expeditions inspired must have aggravated the ferocity and dissoluteness of their ancient habits. Several historians attest the depravation of morals which existed, both among the crusaders and in the states formed out of their conquests."—H. Hallam, *The Middle Ages*, ch. 9, pt. 1.—"It was not possible for the crusaders to travel through so many countries, and to behold their various customs and institutions, without acquiring information and improvement. Their views enlarged; their prejudices wore off; new ideas crowded into their minds; and they must have been sensible, on many occasions, of the rusticity of their own manners when compared with those of a more polished people. . . . Accordingly, we discover, soon after the commencement of the crusades, greater splendour in the courts of princes, greater pomp in public ceremonies, a more refined taste in pleasure and amusements, together with a more romantic spirit of enterprise spreading gradually over Europe; and to these wild expeditions, the effect of superstition and folly, we owe the first gleams of light which tended to dispel barbarism and ignorance. But the beneficial consequences of the crusades took place slowly; their influence upon the state of property, and, consequently, of power, in the different kingdoms of Europe, was more immediate as well as discernible."—W. Robertson, *View of the Progress of Soc. in Europe*, sect. 1.—"The cru-

sades are not, in any mind, either the popular delusions that our cheap literature has determined them to be, nor papal conspiracies against kings and peoples, as they appear to the Protestant controversialist; nor the savage outbreaks of expiring barbarism, thirsting for blood and plunder, nor volcanic explosions of religious intolerance. I believe them to have been, in their deep sources, and in the minds of their best champions, and in the main tendency of their results, capable of ample justification. They were the first great effort of mediæval life to go beyond the pursuit of selfish and isolated ambitions; they were the trial-feat of the young world, essaying to use, to the glory of God and the benefit of man, the arms of its new knighthood. . . . That in the end they were a benefit to the world no one who reads can doubt; and that in their course they brought out a love for all that is heroic in human nature, the love of freedom, the honour of prowess, sympathy with sorrow, perseverance to the last and patient endurance without hope, the chronicles of the age abundantly prove; proving, moreover, that it was by the experience of those times that the forms of those virtues were realized and presented to posterity."—W. Stubbs, *Seventeen Lects. on the Study of Mediæval and Modern Hist.*, lect. 8.—"Though begun under the name and influence of religious belief, the crusades deprived religious ideas, I shall not say of their legitimate share of influence, but of their exclusive and despotic possession of the human mind. This result, though undoubtedly unforeseen, arose from various causes. The first was evidently the novelty, extent, and variety of the scene which displayed itself to the crusaders; what generally happens to travellers happened to them. It is mere common-place to say, that travelling gives freedom to the mind; that the habit of observing different nations, different manners and different opinions, enlarges the ideas, and disengages the judgment from old prejudices. The same thing happened to those nations of travellers who have been called the crusaders; their minds were opened and raised by having seen a multitude of different things, by having become acquainted with other manners than their own. They found themselves also placed in connexion with two states of civilization, not only different from their own, but more advanced—the Greek state of society on the one hand, and the Mussulman on the other. . . . It is curious to observe in the chronicles the impression made by the crusaders on the Mussulmans, who regarded them at first as the most brutal, ferocious, and stupid barbarians they had ever seen. The crusaders, on their part, were struck with the riches and elegance of manners which they observed among the Mussulmans. These first impressions were succeeded by frequent relations between the Mussulmans and Christians. These became more extensive and important than is commonly believed. . . . There is another circumstance which is worthy of notice. Down to the time of the crusades, the court of Rome, the centre of the Church, had been very little in communication with the laity, unless through the medium of ecclesiastics; either legates sent by the court of Rome, or the whole body of the bishops and clergy. There were always some laymen in direct relation with Rome; but upon the whole,

it was by means of churchmen that Rome had any communication with the people of different countries. During the crusades, on the contrary, Rome became a halting-place for a great portion of the crusaders, either in going or returning. A multitude of laymen were spectators of its policy and its manners, and were able to discover the share which personal interest had in religious disputes. There is no doubt that this newly-acquired knowledge inspired many minds with a boldness hitherto unknown. When we consider the state of the general mind at the termination of the crusades, especially in regard to ecclesiastical matters, we cannot fail to be struck with a singular fact: religious notions underwent no change, and were not replaced by contrary or even different opinions. Thought, notwithstanding, had become more free; religious creeds were not the only subject on which the human mind exercised its faculties; without abandoning them, it began occasionally to wander from them, and to take other directions. . . . The social state of society had undergone an analogous change. . . . Without entering into the details . . . we may collect into a few general facts the influence of the crusades on the social state of Europe. They greatly diminished the number of petty fiefs, petty domains, and petty proprietors; they concentrated property and power in a smaller number of hands. It is from the time of the crusades that we may observe the formation and growth of great fiefs—the existence of feudal power on a large scale. . . . This was one of the most important results of the crusades. Even in those cases where small proprietors preserved their fiefs, they did not live upon them in such an insulated state as formerly. The possessors of great fiefs became so many centres around which the smaller ones were gathered, and near which they came to live. During the crusades, small proprietors found it necessary to place themselves in the train of some rich and powerful chief, from whom they received assistance and support. They lived with him, shared his fortune, and passed through the same adventures that he did. When the crusaders returned home, this social spirit, this habit of living in intercourse with superiors continued to subsist, and had its influence on the manners of the age. . . . The extension of the great fiefs, and the creation of a number of central points in society, in place of the general dispersion which previously existed, were the two principal effects of the crusades, considered with respect to their influence upon feudalism. As to the inhabitants of the towns, a result of the same nature may easily be perceived. The crusades created great civic communities. Petty commerce and petty industry were not sufficient to give rise to communities such as the great cities of Italy and Flanders. It was commerce on a great scale—maritime commerce, and, especially, the commerce of the East and West, which gave them birth; now it was the crusades which gave to the maritime commerce the greatest impulse it had yet received. On the whole, when we survey the state of society at the end of the crusades, we find that the movement tending to dissolution and dispersion, the movement of universal localization (if I may be allowed such an expression), had ceased, and had been succeeded by a movement in the contrary direction, a movement of centralization. All

things tended to mutual approximation; small things were absorbed in great ones, or gathered round them. Such was the direction then taken by the progress of society."—F. Guizot, *Hist. of Civilization*, lect. 8 (v. 1).

CRYPTEIA, The. See KRYPTeia.

CTESIPHON.—"The Parthian monarchs, like the Mogul sovereigns of Hindostan, delighted in the pastoral life of their Scythian ancestors, and the imperial camp was frequently pitched in the plain of Ctesiphon, on the eastern banks of the Tigris, at the distance of only three miles from Seleucia. The innumerable attendants on luxury and despotism resorted to the court, and the little village of Ctesiphon insensibly swelled into a great city. Under the reign of Marcus, the Roman generals penetrated as far as Ctesiphon and Seleucia. They were received as friends by the Greek colony; they attacked as enemies the seat of the Parthian kings; yet both cities experienced the same treatment. The sack and conflagration of Seleucia, with the massacre of 300,000 of the inhabitants, tarnished the glory of the Roman triumph, Seleucia, already exhausted by the neighborhood of a too powerful rival, sunk under the fatal blow; but Ctesiphon, in about thirty-three years, had sufficiently recovered its strength to maintain an obstinate siege against the emperor Severus. The city was, however, taken by assault; the king, who defended it in person, escaped with precipitation; 100,000 captives and a rich booty rewarded the fatigues of the Roman soldiers. Notwithstanding these misfortunes, Ctesiphon succeeded to Babylon and to Seleucia as one of the great capitals of the East."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 8.—In 637 A. D. Ctesiphon passed into the possession of the Saracens. See MAHOMETAN CONQUEST AND EMPIRE: A. D. 632-651.

A. D. 1511.—Spanish conquest and occupation of the island.—"Of the islands, Cuba was the second discovered; but no attempt had been made to plant a colony there during the lifetime of Columbus; who, indeed, after skirting the whole extent of its southern coast, died in the conviction that it was part of the continent. At length, in 1511, Diego, the son and successor of the 'admiral,' who still maintained the seat of government in Hispaniola, finding the mines much exhausted there, proposed to occupy the neighbouring island of Cuba, or Fernandina, as it is called, in compliment to the Spanish monarch. He prepared a small force for the conquest, which he placed under the command of Don Diego

Velasquez. . . . Velasquez, rather his lieutenant Narvaez, who took the office on himself of scouring the country, met with no serious opposition from the inhabitants, who were of the same family with the effeminate natives of Hispaniola." After the conquest, Velasquez was appointed governor, and established his seat of government at St. Jago, on the southeast corner of the island. —W. H. Prescott, *Conquest of Mexico*, bk. 2, ch. 1.

ALSO IN: Sir A. Helps, *Spanish Conquest in America*, bk. 7.

A. D. 1514-1851.—Slow development of the island.—Capture of Havana by the English.—Discontent with Spanish rule.—Conspiracies of revolution.—"Velasquez founded many of the towns of the island, the first of which was Baracoa, then Bayamo, and in 1514 Trinidad, Santo Espiritu, Puerto Principe; next, in 1515, Santiago de Cuba, as also, in the same year, the town of Habana. . . . This period (1511-1607) is particularly interesting to the general reader from the fact that in it the explorations of Hernandez de Cadoba and Grijalva to Darien, Yucatan, etc., were inaugurated, — events which had so much to do with the spread of Spanish rule and discovery, paving the way as they did for the exploration of Mexico under Hernando Cortes, who, in the early history of Cuba, figures largely as the lieutenant of the Governor Velasquez. . . . In 1524, Diego Velasquez died, — his death hastened, it is said, by the troubles brought upon him by his disputes with his insubordinate lieutenant, Cortes. . . . In the history of the improvement of the island, his government will bear favorable comparison with many of the later governments; and while that great evil, slavery, was introduced into the island in his time, so also was the sugar cane. . . . Up to 1588, there seems to be nothing specially striking in the general history of the island, if we except the constant attacks with fire and sword of the 'filibusteros,' or pirates of all nations, from which most all the sea-coast towns suffered more or less; but in that year there arrived at Santiago de Cuba a man destined to play an important part in the history and discovery of the new world, and named as Provincial Governor of Florida as well as of Cuba, — I allude to Hernando de Soto, who brought with him 10 large vessels, prepared and fitted out expressly for the conquest of the new Spanish territory of Florida. After much care and preparation, this expedition started out from the city of Habana, the 12th of May [see FLORIDA: A. D. 1528-1542]. . . . In this period, also, was promulgated that order, secured, it is believed, by the noble efforts of Padre Las Casas, prohibiting the enslaving of the aborigines; while, also, such had become its importance as a town, all vessels directed to and from Mexico were ordered to stop at Havana. In the period of years that elapsed from 1607 to 1762, the island seems to have been in a perfect state of lethargy, except the usual changes of its many Governors, and the raids made upon it by pirates, or by more legalized enemies in the form of French and English men-of-war. In this latter year, however, occurred an event of much import, from the fact that after it, or upon its occurrence, the Government of Spain was led to see the great importance of Cuba, and particularly Havana, as the 'Key to the New

World.—this event was the taking of Havana by the English. On the 6th of June, 1762, there arrived off the port of Havana an English squadron of 32 ships and frigates, with some 200 transports, bringing with them a force of nearly 20,000 men of all arms, under command of the Duke of Albemarle. This formidable armament, the largest that America had ever seen, laid siege to the city of Havana, whose garrison consisted at that time of only about 2,700 regulars and the volunteers that took up arms immediately for the defense of the place. . . . The garrison, however, made a very gallant and prolonged defense, notwithstanding the smallness of their numbers, and finally, surrendering, were permitted to march out with the honors of war, the English thus coming into possession of the most important defences on the coast, and, subsequently, taking possession of the town of Matanzas. Remaining in possession of this portion of the Island of Cuba for many months (until July 6, 1763), the English, by importing negro labor to cultivate the large tracts of wild land, and by shipping large quantities of European merchandize, gave a start to the trade and traffic of the island that pushed it far on its way to the state of prosperity it has now reached; but by the treaty of peace, at Paris, in February, 1763 [see Seven Years War], was restored to Spain the portion of the island wrested from her by the English. . . . In this period (1762-1801) the island made rapid advances in improvement and civilization, many of the Captains-General of this period doing much to improve the towns and the people, beautifying the streets, erecting buildings, etc. In 1763, a large emigration took place from Florida, and in 1795 the French emigrants from Santo Domingo came on to the island in large numbers. . . . From 1801, rapid increase in the prosperity of the island has taken place. . . . At various times insurrections, some of them quite serious in their nature, have shown what the natural desire of the native population is for greater privileges and freedom. . . . In 1823, there was a society of 'soles,' as it was called, formed for the purpose of freeing the island, having at its head young D. Francisco Lemus, and having for its pretext that the island was about to be sold to England. In 1829, there was discovered the conspiracy of the Black Eagle, as it was called (*Aguila Negra*), an attempt on the part of the population to obtain their freedom, some of the Mexican settlers in the island being prominent in it. The insurrection, or attempt at one, by the blacks in 1844, was remarkable for its widespread ramifications among the slaves of the island, as well as its thorough organization,—the intention being to murder all the whites on the island. Other minor insurrections there were, but it remained for Narciso Lopez, with a force of some 300 men, to make the most important attempt [1851], in which he lost his life, to free the island."—S. Hazard, *Cuba with Pen and Pencil*, pp. 547-550.

A. D. 1845-1860.—Acquisition coveted by the slave-power in the United States.—Attempted purchase.—Filibustering schemes.—

The Ostend Manifesto.—"When the Spanish colonies in America became independent, they abolished slavery. Apprehensive that the republics of Mexico and Columbia would be anxious to wrest Cuba and Porto Rico from Spain, secure their independence, and introduce into those islands the idea, if they did not establish the fact, of freedom, the slave-masters [of the United States] at once sought to guard against what they deemed so calamitous an event. . . . But after the annexation of Texas, there was a change of feeling and purpose, and Cuba, from being an object of dread, became an object of vehement desire. The propagandists, strengthened and emboldened by that signal triumph, now turned their eyes towards this beautiful 'isle of the sea,' as the theatre of new exploits; and they determined to secure the 'gem of the Antilles' for the coronet of their great and growing power. During Mr. Polk's administration an attempt was made to purchase it, and the sum of \$100,000,000 was offered therefor. But the offer was promptly declined. What, however, could not be bought it was determined to steal, and filibustering movements and expeditions became the order of the day. For no sooner was President Taylor inaugurated than he found movements on foot in that direction; and, in August, 1849, he issued a proclamation, affirming his belief that an 'armed expedition' was being fitted out 'against Cuba or some of the provinces of Mexico,' and calling upon all good citizens 'to discountenance and prevent any such enterprise.' In 1851 an expedition, consisting of some 500 men, sailed from New Orleans under Lopez, a Cuban adventurer. But though it effected a landing, it was easily defeated, and its leader and a few of his followers were executed. Soon afterward, a secret association, styling itself the Order of the Lone Star, was formed in several of the Southern cities, having a similar object in view; but it attracted little notice and accomplished nothing. . . . In August, 1854, President Pierce instructed Mr. Marcy, his Secretary of State, to direct Buchanan, Mason and Soule, ministers respectively at the courts of London, Paris and Madrid, to convene in some European city and confer with each other in regard to the matter of gaining Cuba to the United States. They met accordingly, in October, at Ostend. The results of their deliberations were published in a manifesto, in which the reasons are set forth for the acquisition; and the declaration was made that the Union could never enjoy repose and security 'as long as Cuba is not embraced within its boundaries.' But the great source of anxiety, the controlling motive, was the apprehension that, unless so annexed, she would 'be Africanized and become a second San Domingo,' thus 'seriously to endanger' the Union. This paper attracted great attention and caused much astonishment. It was at first received with incredulity, as if there had been some mistake or imposition practised. . . . But there was no mistake. . . . It was the deliberate utterance of the conference, and it received the indorsement of Mr. Pierce and his administration. The Democratic national conventions of 1856 and of 1860 were quite as explicit as were the authors of the Ostend manifesto 'in favor of the acquisition of Cuba.'"—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in America*, v. 2, ch. 47.

A. D. 1850.—The Case of the Black Warrior.—One of the irritations that excited feeling in the United States against the Spanish authorities in Cuba was caused, in 1850, by the seizure, at Havana, on purely technical grounds, of the steamer "Black Warrior," which touched at the port for passengers and mail. Her cargo was confiscated and a heavy fine levied on the ship. Indemnity for the wrong to the owners was only obtained after five years of controversy.

A. D. 1865-1895.—In his book, "The West Indies and the Spanish Main," published in 1859, Mr. Anthony Trollope described the situation of the Cubans under Spanish rule by saying: "At present they have no national privilege except that of undergoing taxation. Every office is held by a Spaniard." Of course, there was deep-seated discontent, and many insurrectionary attempts; but "it was not till the end of 1865, and after protracted efforts on the part of the colonists, that they succeeded in obtaining the appointment of a commission to inquire into the causes of their discontent." Nothing came of it; and the Cubans then "set themselves to devise plans for freeing their island from the crushing dominion of Spain. . . . In the month of August, 1868, it was determined that an emissary should be sent through the various districts of the island, with the ostensible purpose of arranging agencies for a journal newly-established at Havannah, but in reality to gauge the state of public opinion, and see upon what assistance an insurrectionary movement might rely. . . . The revolution in the mother-country in September, 1868, which drove the Bourbon dynasty from the throne, seems to have precipitated the insurrection in Cuba. . . . The first hope seems to have been that the new Government would ameliorate the condition of the colony, in which still a not unimportant party clung to the desire for such reforms as would enable them to remain connected with the country of which they had so long formed a part. This hope was disappointed, and the insurgents did not wait long before they took action. The standard of revolt was at length raised by Carlos Manuel de Cespedes, on his estate of Demajagua, at a short distance from the town of Yara, in the eastern department. Cespedes was known as an able lawyer and wealthy planter; and he was not slow in attracting to himself a respectable following. At first he found himself at the head of but a small number of patriots, and all his more trustworthy slaves, the latter of whom he liberated on the spot. He was soon joined by his friend Aguilera, and the two then decided that they would never abandon the cause till they had freed the island from Spanish rule and rendered it independent."—*Edinburgh Review*, Oct. 1873.—The struggle for Cuban independence thus begun was maintained for ten years, with consequences terribly destructive to the prosperity of the island. The contest had little of the character of civilized warfare, on either side. Among its incidents was one that caused great excitement in the United States. An American steamer, the *Virginius*, Captain Joseph Fry, took on a cargo of war material for the Cuban insurgents, at Port au Prince, in October, 1873. She was overtaken on her voyage to the island by the Spanish gun-boat *Tornado*, captured and taken to Santiago de Cuba. There Captain Fry and his crew were tried by court martial and con-

demned to death. The Captain and fifty-two of his men, with four insurgent chiefs who had taken passage on the *Virginius*, were summarily shot. Ninety-three more, under sentence, were saved by the vigorous protests of the captain of the British steamer *Niobe*, which arrived from Jamaica in time to interfere. Much as Americans were horrified and excited by the deed, the American government could not call the Spaniards to account, since the *Virginius* was unlawfully engaged, and her captors had a technical right to the savage penalty they exacted. The same savagery of spirit appears to have been exhibited throughout the war. In 1878 it was practically terminated, by an agreement called the Treaty of El Zanjón, under which Maximo Gomez, the Cuban military leader, abandoned the struggle and retired to San Domingo. The treaty gave representation to Cuba in the Spanish Cortes, and provided for various apparent reforms in the government of the island. According to the Cubans, little has been realized from them. They are said to have simply given new names to old evils. Slavery, however, which had been practically destroyed by the war, was formally abolished by a decree of October 7, 1886, after having been, in 1880, reduced to a preparatory system of "patronage." Discontent has been steadily spreading anew, since the practical outcome of the treaty of El Zanjón began to be understood, and the standard of revolt was again raised by Maximo Gomez, in February, 1895. The war thus reopened seems likely to be more determined and destructive than before.

CUBIT, The.—"The length of the Egyptian foot is . . . shown to be equal to 1.013 English foot, or 12.16 inches (0.3086 metre) and the cubit to 18.24 English inches, or 0.463 metre. This cubit was identical with the Phœnician or Olympic cubit, afterwards adopted in Greece. . . . The second of the two Egyptian cubits was the royal cubit, or cubit of Memphis, of seven palms or twenty-eight digits. . . . The mean length of the Egyptian royal cubit is . . . ascertained to be 20.67 English inches, or 525 mm. . . . The fact that Moses always mentions the Egyptian measures . . . as well as the Egyptian weights . . . proves that the Hebrews originally brought their weights and measures from Egypt. . . . In his dissertation on cubits, Sir Isaac Newton states grounds for his opinion that the sacred cubit of the Jews was equal to 24.7 of our inches, and that the royal cubit of Memphis was equivalent to five-sixths of this sacred Jewish cubit, or 20.6 inches."—H. W. Chisholm, *On the Science of Weighing and Measuring*, ch. 2.

CULDEES, The.—It used to be set forth by religious historians that the Culdees were an ancient religious fraternity in Scotland, probably founded by Columba, the saintly Irish missionary of the sixth century, and having its principal seat in Iona; that they "were the lights of Scotland in a dark and superstitious age"; that they struggled for several centuries against the errors and the oppressive pretensions of Rome." The facts gathered by Dean Reeves and published in 1864, in his work on the "Culdees of

the British Islands," supported by the more recent studies of Mr. W. F. Skene, are now generally accepted. Says Mr. Skene, (*Celtic Scotland*, bk. 2, ch. 6): "It is not till after the expulsion of the Columban monks from the kingdom of the Picts, in the beginning of the eighth century, that the name of Culdee appears." Mr. Skene's conclusion is that the Culdees sprang from an ascetic order called Deicolæ or God-worshippers; that in Irish the name became Ceile De, thence corrupted into Culdee; that they were hermits, who became in time associated in communities, and were finally brought under the canonical rule of the Roman church, along with the secular clergy.

CUMÆ.—CUMÆAN SIBYL.—"Earlier than 735 B. C., . . . though we do not know the precise era of its commencement, there existed one solitary Grecian establishment in the Tyrrhenian Sea,—the Campanian Cumæ, near Cape Misenum; which the more common opinion of chronologists supposed to have been founded in 1050 B. C. and which has even been carried back by some authors to 1139 B. C. . . . Cumæ, situated on the neck of the peninsula which terminates in Cape Misenum, occupied a lofty and rocky hill overhanging the sea and difficult of access on the land side. . . . In the hollow rock under the very walls of the town was situated the cavern of the prophetic Sibyl, —a parallel and reproduction of the Gergithian Sibyl, near Kyme in Æolis: in the immediate neighborhood, too, stood the wild woods and dark lake of Avernus, consecrated to the subterranean gods, and offering an establishment of priests, with ceremonies evoking the dead, for purposes of prophecy or for solving doubts and mysteries. It was here that Grecian imagination localized the Cimmerians and the fable of Odysseus."—G. Grote, *Hist. of Greece*, pt. 2, ch. 22.—See, also, **SIBYLS**.

CUMBRIA: The British kingdom.—"The Britons of Cumbria occupy a tolerably large space on the map, but a very small one in history;—their annals have entirely perished;—and nothing authentic remains concerning them, except a few passages. . . . Romance would furnish more; for it was in Cumbria that Rhyderc, or Roderic the magnificent, is therein represented to have reigned, and Merlin to have prophesied. Arthur held his court in merry Carlisle; and Peredur, the Prince of Sunshine, whose name we find amongst the princes of Strathclyde, is

one of the great heroes of the 'Mabinogion,' or tales of youth, long preserved by tradition amongst the Cymri. These fantastic personages, however, are of importance in one point of view, because they show, what we might otherwise forget—that from the Ribble in Lancashire, or thereabouts, up to the Clyde, there existed a dense population composed of Britons, who preserved their national language and customs, agreeing in all respects with the Welsh of the present day. So that even in the tenth century, the ancient Britons still inhabited the greater part of the western coast of the island, however much they had been compelled to yield to the political supremacy of the Saxon invaders. The 'Regnum Cumbrense' comprehended many districts, probably governed by petty princes or Reguli, in subordination to a chief monarch or Pendragon. Reged appears to have been somewhere in the vicinity of Annandale. Strathclyde is of course the district or vale of Clydesdale. In this district, or state, was situated Alclud, or Dunbritton, now Dumbarton, where the British kings usually resided; and the whole Cumbrian kingdom was not infrequently called Strathclyde, from the ruling or principal state."—F. Palgrave, *History of the Anglo-Saxons*, ch. 11.—Cumbria and Cambria (Wales), the two states long maintained by the Britons, against the Angles and Saxons, bore, in reality, the same name, Cumbria being the more correct form of it. The earliest development of the so-called Welsh poetry seems to have been in Cumbria rather than in Wales. Taliesin and Aneirin were Cumbrian bards, and Arthur, if any historical personage stands behind his kingly shadow, was probably a Cumbrian hero.—J. Rhys, *Celtic Britain*.

CUNEIFORM WRITING.—The characters employed for the written languages of ancient Babylonia and Assyria have been called cuneiform, from the Latin *cuneus*, a wedge, because the marks composing them are wedge-shaped. All knowledge of those characters and of the languages expressed in them had been lost for many centuries, and its recent recovery is one of the most marvelous achievements of our age. "Travelers had discovered inscriptions engraved in cuneiform, or, as they were also termed, arrow-headed characters, on the ruined monuments of Persepolis and other ancient sites in Persia. . . . The inscriptions were in three different systems of cuneiform writing; and since the three kinds of inscription were always placed side by side, it was evident that they represented different versions of the same text. . . . The clue to the decipherment of the inscriptions was first discovered by the successful guess of a German scholar, Grotefend. Grotefend noticed that the inscriptions generally began with three or four words, one of which varied, while the others remained unchanged. The variable word had three forms, though the same form always appeared on the same monument. Grotefend, therefore, conjectured that this word represented the name of a king, the words which followed it being royal titles." Working on this conject-

ure, he identified the three names with Darius, Xerxes and Artaxerxes, and one of the supposed titles with a Zend word for "king," which gave him a considerable part of the cuneiform alphabet. He was followed in the work by Burnouf, Lassen and Sir Henry Rawlinson, until, finally, Assyrian inscriptions were read with "almost as much certainty as a page of the Old Testament."—A. H. Sayce, *Fresh Light from the ancient monuments*, ch. 1.

CURFEW-BELL, The.—"Except from its influence upon the imagination, it would be hardly worth while to notice the legend of the curfew-bell, so commonly supposed to have been imposed by William [the Conqueror] upon the English, as a token of degradation and slavery; but the 'squilla di lontano, che paja il giorno pianger che si muore,' was a universal custom of police throughout the whole of mediæval Europe, not unconnected with devotional feeling."—Sir F. Palgrave, *Hist. of Normandy and Eng.*, v. 3, p. 627.—"In the year [1061] after King Henry's death [Henry I. of France], in a Synod held at Caen by the Duke's authority [Duke William of Normandy, who became in 1066 the Conqueror and King of England], and attended by Bishops, Abbots, and Barons, it was ordered that a bell should be rung every evening, at hearing of which prayer should be offered, and all people should get within their houses and shut their doors. This odd mixture of piety and police seems to be the origin of the famous and misrepresented Curfew. Whatever was its object, it was at least not ordained as any special hardship on William's English subjects."—E. A. Freeman, *Hist. of the Norman Conquest of Eng.*, ch. 12, sect. 3 (v. 3).

CURIA, Ancient Roman. See COMITIA CURIATA.

CURIA, Municipal, of the later Roman empire.—**Decuriones**.—"It is only necessary in this work to describe the general type of the municipal organization which existed in the provinces of the Roman Empire after the time of Constantine. . . . The proprietors of land in the Roman provinces generally dwelt in towns and cities, as a protection against brigands and man-stealers. Every town had an agricultural district which formed its territory, and the landed proprietors constituted the municipality. The whole local authority was vested in an oligarchical senate called the Curia, consisting probably of one hundred of the wealthiest landed proprietors in the city or township. This body elected the municipal authorities and officers, and filled up vacancies in its own body. It was therefore independent of the proprietors from among whom it was taken, and whose interests it ought to have represented. The Curia—not the body of landed proprietors—formed therefore the Roman municipality. The Curia was used by the imperial government as an instrument of fiscal extortion."—G. Finlay, *Greece under the Romans*, ch. 2, sect. 1.—"When the progress of fiscal tyranny had almost sapped the vigor of society, the decuriones [members of the municipal curiæ, called, also, curiales] . . . being held jointly responsible for the taxation, became the

veriest slaves of the empire. Responsible jointly for the taxes, they were, by the same token, responsible for their colleagues and their successors; their estates were made the securities of the imperial dues; and if any estate was abandoned by its proprietor, they were compelled to occupy it and meet the imposts exigible from it. Yet they could not relinquish their offices; they could not leave the city except by stealth; they could not enter the army, or the priesthood, or any office which might relieve them from the onerous and intolerable duty. In short, this dignity was so much abhorred that the lowest plebeian shunned admission to it, the members of it made themselves bondmen, married slave-women, or joined the barbaric hordes in order to escape it; and malefactors, Jews and heretics were sometimes condemned to it, as an appropriate penalty for their offenses."—P. Godwin, *Hist. of France: Ancient Gaul*, bk. 2, ch. 8.

ALSO IN: T. Hodgkin, *Italy and her Invaders*, bk. 3, ch. 9.—F. Guizot, *Hist. of Civilization*, v. 2 (v. 1, *France*), lect. 2.—See, also ROME: A. D. 363-379.

CURIA, Papal.—**College of Cardinals**.—**Consistory**.—"The Court of Rome, commonly called the Roman Curia, consisted of a number of dignified ecclesiastics who assisted the Pope in the executive administration. The Pontiff's more intimate advisers, or, as we should say, his privy council, were the College of Cardinals [see PAPACY: A. D. 1059], consisting of a certain number of cardinal bishops, cardinal priests, and cardinal deacons. The cardinal deacons, at first seven and afterwards fourteen in number, were originally ecclesiastics appointed as overseers and guardians of the sick and poor in the different districts of Rome. Equal to them in rank were the fifty cardinal priests, as the chief priests of the principal Roman churches were called; who, with the cardinal deacons, formed, in very early times, the presbytery, or senate of the Bishop of Rome. . . . According to some authorities, cardinal bishops were instituted in the 9th century; according to others not till the 11th, when seven bishops of the dioceses nearest to Rome—Ostia, Porto, Velitrae, Tusculum, Præneste, Tibur, and the Sabines—were adopted by the Pope partly as his assistants in the service of the Lateran, and partly in the general administration of the Church. In process of time, the appointment of such cardinal bishops was extended not only to the rest of Italy but also to foreign countries. Though the youngest of the cardinals in point of time, cardinal bishops were the highest in rank, and enjoyed the pre-eminence in the College. Their titles were derived from their dioceses. . . . But they were also called by their own names. The number of the cardinals was indefinite and varying. The Council of Basle endeavoured to restrict it to 24. But this was not carried out, and Pope Sixtus V. at length fixed the number at 70. The Council called the Consistory, which advised with the Pope both in temporal and ecclesiastical matters, was ordinarily private, and confined to the cardinals alone; though on extraordinary occasions, and for solemn purposes of state, as in the audiences of foreign ambassadors, &c., other prelates, and even distinguished laymen, might

appear in it."—T. H. Dyer, *Hist. of Modern Europe*, c. 1, p. 38.

CURIA REGIS OF THE NORMAN KINGS.—"The Curia Regis [under the Norman Kings of England], the supreme tribunal of judicature, of which the Exchequer was the financial department or session, was . . . the court of the king sitting to administer justice with the advice of his counsellors; those counsellors being, in the widest acceptance, the whole body of tenants-in-chief, but in the more limited usage, the great officers of the household and specially appointed judges. The great gatherings of the national council may be regarded as full sessions of the Curia Regis, or the Curia Regis as a perpetual committee of the national council."—W. Stubbs, *Const. Hist. of Eng.*, ch. 11, sect. 127.—"Not long after the granting of Magna Charta, the Curia Regis was permanently divided into three committees or courts, each taking a certain portion of the business: (1) Fiscal matters were confined to the Exchequer; (2) civil disputes, where neither the king's interest nor any matter savouring of a criminal nature were involved, were decided in the Common Pleas; and (3) the court of King's Bench retained all the remaining business and soon acquired the exclusive denomination of the ancient Curia Regis. But the same staff of judges was still retained for all three courts, with the chief justiciar at their head. Towards the end of Henry III.'s reign, the three courts received each a distinct staff, and on the abolition by Edward I. of the office of chief justiciar, the only remaining bond of union being severed, they became completely separated. Some trace of their ancient unity of organization always survived, however, in the court of Exchequer Chamber; until at length after six centuries of independent existence they were again united by the Judicature Act, 1873. Together with the Court of Chancery and the Probate, Divorce and Admiralty courts, they now form divisions of a consolidated High Court of Justice, itself a branch of the Supreme Court of Judicature."—T. P. Taswell-Langmead, *Eng. Const. Hist.*, p. 154.—"The Aula Regia, or Curia Regis . . . has been described in various and at first sight contradictory terms. Thus it has been called the highest Law Court, the Ministry of the King, a Legislative Assembly, &c. The apparent inconsistency of these descriptions vanishes on closer inspection, and throws great light on mediæval history. For the Curia Regis possessed every attribute which has been ascribed to it."—A. V. Dicey, *The Privy Council*, pt. 1. See, also, **LAW, COMMON**: A. D. 1066-1154, and **LAW, CRIMINAL**: A. CYCLADES, The.—SPORADES, The.—"Among the Ionic portion of Hellas are to be reckoned (besides Athens) Eubœa, and the numerous group of islands included between the southernmost Eubœan promontory, the eastern coast of Peloponnesus, and the northwestern coast of Krête. Of these islands some are to be considered as outlying prolongations, in a south-easterly direction, of the mountain-system of Attica; others of that of Eubœa; while a certain number of them lie apart from either system, and seem referable to a volcanic origin. To the first class belong Keôs, Kythnos, Seriphus, Pholegandrus, Sikinos, Gyaros, Syra, Paros, and Antiparos; to the second class Andros, Tênos, Mykonos, Dêlos, Naxos, Amorgos; to the third class Kimôlus, Mêlos, Thêra. These islands passed amongst the ancients by the general name of the Cyclades and the Sporades; the former denomination being commonly understood to comprise those which immediately surrounded the sacred island of Dêlos,—the latter being given to those which lay more scattered and apart. But the names are not applied with uniformity or steadiness even in ancient times: at present, the whole group are usually known by the title of Cyclades."—G. C. 364, in Thessaly, near Pharsalus, on the heights called Cynoscephalæ, or the Dog's Heads, and delivered the Thessalian cities from the encroachments of the tyrant of Pheræ."—C. Thirlwall, *Hist. of Greece*, ch. 40.

(B. C. 197). See **GREECE**: B. C. 214-146.

CYNOSSEMA, Naval battle of.—Two successive naval battles fought, one in July and the second in October, B. C. 411, between the Athenians and the Peloponnesian allies, in the Hellespont, are jointly called the Battle of Cynossema. The name was taken from the headland called Cynossema, or the "Dog's Tomb," "ennobled by the legend and the chapel of the Trojan queen Hecuba." The Athenians had the advantage in both encounters, especially in the latter one, when they were joined by Alcibiades, with reinforcements, just in time to decide the doubtful fortunes of the day.—E. Curtius, *Hist. of Greece*, bk. 4, ch. 5. See GREECE: B. C. 411-407.

CYNURIANS, The. See KYNURIANS.

CYPRESS DOCTRINE. See LAW, EQUITY: A. D. 1601.

CYPRUS: Origin of the name.—"The Greek name of the island was derived from the abundance in which it produced the beautiful plant ('Copher') which furnishes the 'al-henna,' coveted throughout the East for the yellow dye which it communicates to the nails. It was rich in mines of copper, which has obtained for it the name by which it is known in the modern languages of the West."—J. Kenrick, *Phœnicia*, ch. 4.

Early History.—"The first authentic record with regard to Cyprus is an inscription on an Egyptian tombstone of the 17th century B. C., from which it appears that the island was conquered by Thothmes III. of Egypt, in whose reign the exodus of the Children of Israel is supposed to have taken place. This was no doubt anterior to the establishment of any Greek colonies, and probably, also, before the Phœnicians had settled in the island. . . . As appears from various inscriptions and other records, Cyprus became subject successively to Egypt, as just mentioned, to Assyria, to Egypt again in 568 B. C., when it was conquered by Amasis, and in 525 B. C. to Persia. Meanwhile the power of the Greeks had been increasing. . . . The civilization of the West was about to assert itself at Marathon and Salamis; and Cyprus, being midway between East and West, could not fail to be involved in the coming conflict. On the occasion of the Ionic revolt [see PERSIA: B. C. 521-493] the Greek element in Cyprus showed its strength: and in 502 B. C. the whole island, with the single exception of the Phœnician town of Amathus, took part with the Ionians in renouncing the authority of the Persian king." But in the war which followed, the Persians, aided by the Phœnicians of the mainland, reconquered Cyprus, and the Cyprian Greeks were long disheartened. They recovered their courage, however, about 410 B. C. when Evagoras, a Greek of the royal house of Teucer, made himself master of Salamis, and finally established a general sovereignty over the island—even extending his power to the mainland and subjugating Tyre. "The reign of Evagoras is perhaps the most brilliant period in the history of Cyprus. Before his death, which took place in 374 B. C., he had raised the island from the position of a mere dependency of one or other of the great Eastern monarchies, had gained for it a place among the leading states of Greece, and had solved the question as to which division of the ancient world the Cyprian people should be assigned. Consequently when, some forty years later, the power of Persia was shattered by Alexander the Great at the battle of Issus, the kings of the island hastened to offer

him their submission as the leader of the Greek race, and sent 120 ships to assist him in the siege of Tyre." After Alexander's death, Cyprus was disputed between Antigonus and Ptolemy. (See MACEDONIA: B. C. 310-301.) The king of Egypt secured the prize, and the island remained under the Greek-Egyptian crown, until it passed, with the rest of the heritage of the Ptolemys to the Romans. "When the [Roman] empire was divided, on the death of Constantine the Great, Cyprus, like Malta, passed into the hands of the Byzantine Emperors. Like Malta, also, it was exposed to frequent attacks from the Arabs; but, although they several times occupied the island and once held it for no less than 160 years, they were always expelled again by the Byzantine Emperors, and never established themselves there as firmly as they did in Malta. The crusades first brought Cyprus into contact with the western nations of modern Europe."—C. P. Lucas, *Hist. Geog. of British Colonies*, sect. 1, ch. 2.

B. C. 58.—Annexed to the Roman Dominions.—"The annexation of Cyprus was decreed in 696 [B. C. 58] by the people [of Rome], that is, by the leaders of the democracy, the support given to piracy by the Cypriots being alleged as the official reason why that course should now be adopted. Marcus Cato, intrusted by his opponents with the execution of this measure, came to the island without an army; but he had no need of one. The king [a brother of the king of Egypt] took poison; the inhabitants submitted without offering resistance to their inevitable fate, and were placed under the governor of Cilicia."—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 4.

A. D. 117.—Jewish insurrection.—"This rich and pleasant territory [the island of Cyprus] had afforded a refuge to the Jews of the continent through three generations of disturbance and alarm, and the Hebrew race was now [A. D. 117] probably not inferior there in number to the native Syrians or Greeks. On the first outburst of a Jewish revolt [against the Roman domination, in the last year of the reign of Trajan] the whole island fell into the hands of the insurgents, and became an arsenal and rallying point for the insurrection, which soon spread over Egypt, Cyrene and Mesopotamia. The leader of the revolt in Cyprus bore the name of Artemion, but we know no particulars of the war in this quarter, except that 240,000 of the native population is said to have fallen victims to the exterminating fury of the insurgents. When the rebellion was at last extinguished in blood, the Jews were forbidden thenceforth to set foot on the island; and even if driven thither by stress of weather, the penalty of death was mercilessly enforced. . . . The Jewish population of Cyrenaica outnumbered the natives. . . . The hostility of the Jews in these parts was less directed against the central government and the Roman residents than the native race. . . . Of these 220,000 are said to have perished."—C. Merivale, *Hist. of the Romans*, ch. 65.

A. D. 1191.—Conquest by Richard Cœur de Lion.—Founding of the Latin Kingdom.—During the civil strife and confusion of the last years of the Comnenian dynasty of emperors at Constantinople, one of the members of the family,

Isaac Comnenos, secured the sovereignty of Cyprus and assumed the title of emperor. With the alliance of the king of Sicily, he defeated the Byzantine forces sent against him, and was planted securely, to all appearance, on his newly built throne at the time of the Third Crusade. Circumstances at that time (A. D. 1191) gave him a fatal opportunity to provoke the English crusaders. First, he seized the property and imprisoned the crews of three English ships that were wrecked on the Cyprian coast. Not satisfied with that violence, he refused shelter from the storm to a vessel which bore Berengaria of Navarre, the intended wife of King Richard. "The king of England immediately sailed to Cyprus; and when Isaac refused to deliver up the shipwrecked crusaders, and to restore their property, Richard landed his army and commenced a series of operations, which ended in his conquering the whole island, in which he abolished the administrative institutions of the Eastern Empire, enslaving the Greek race, introducing the feudal system, by which he riveted the chains of a foreign domination, and then gave it as a present to Guy of Lusignan, the titular king of Jerusalem, who became the founder of a dynasty of Frank kings in Cyprus."—G. Finlay, *Hist. of the Byzantine and Greek Empires, from 716 to 1453*, bk. 3, ch. 3, sect. 1.—Before giving Cyprus to Guy of Lusignan, Richard had sold the island to the Templars, and Guy had to pay the knights heavily for the extinguishment of their rights. Richard, therefore, was rather a negotiator than a giver in the transaction.—W. Stubbs, *Seventeen Lects. on the Study of Mediæval and Modern History*, lect. 8.

A. D. 1192-1489.—The kingdom under the house of Lusignan.—"The house of Lusignan maintained itself in Cyprus for nearly three centuries, during which, although fallen somewhat from the blessedness which had been broken up by Isaac Comnenos, the island seems to have retained so much fertility and prosperity as to make its later history very dark by contrast. . . . Guy, we are told, received Cyprus for life only, and did homage for the island to Richard. As he already bore the title of king, the question whether he should hold Cyprus as a kingdom does not seem to have arisen. . . . On his death, in April, 1194, Richard putting in no claim for the reversion, his brother, Amalric of Lusignan, constable of Palestine, entered on the possession as his heir. . . . Amalric succeeded to the crown of Jerusalem; the crown of Jerusalem, which, after the year 1269, became permanently united with that of Cyprus, was an independent crown, and the king of Jerusalem an anointed king: the union of the crowns therefore seems to have precluded any question as to the tenure by which the kingdom of Cyprus should be held. . . . The homage then due to Richard, or to the crown of England, ceased at the death of Guy."—W. Stubbs, *Seventeen Lects. on the Study of Mediæval and Modern Hist.*, lect. 8.—See, also, JERUSALEM: A. D. 1291.

A. D. 1489-1570.—A Venetian dependency.—The last reigning king of Cyprus was James II., a bastard brother of Queen Charlotte, whom he drove from the Cypriot throne in 1464. This king married a Venetian lady, Caterina Cornaro,

in 1471 and was declared to be "the son-in-law of the Republic." The unscrupulous republic is said to have poisoned its son-in-law in order to secure the succession. He died in 1473, and a son, born after his death, lived but two years. Cyprus was then ruled by the Venetians for fifteen years in the name of Caterina, who finally renounced her rights wholly in favor of the republic. After 1489, until its conquest by the Turks, Cyprus was a Venetian dependency, in form as well as in fact, but tributary to the Sultan of Egypt.—W. Stubbs, *Seventeen Lects. on the Study of Mediæval and Modern Hist.*, lect. 8.

CYREANS, The. See PERSIA: B. C. 401-400.

CYRENAICA.—CYRENE.—KYRENE.—A city, growing into a kingdom, which was founded at an early day by the Greeks, on that projecting part of the coast of Libya, or northern Africa, which lies opposite to Greece. The first settlers were said to have been from the little island of Thera, whose people were bold and enterprising. The site they chose "was of an unusual nature, especially for islanders, and lay several miles away from the sea, the shores of which were devoid of natural bays for anchorage. But, with this exception, every advantage was at hand: instead of the narrow stony soil of their native land, they found the most fertile corn-fields, a broad table-land with a healthy atmosphere and watered by fresh springs; a well-wooded coast-land, unusually well adapted for all the natural products which the Hellenes deemed essential; while in the background spread mysteriously the desert, a world passing the comprehension of the Hellenes, out of which the Libyan tribes came to the shore with horses and camels, with black slaves, with apes, parrots and other wonderful animals, with dates and rare fruits. . . . An abundant spring of water above the shore was the natural point at which the brown men of the deserts and the mariners assembled. Here regular meetings became customary. The bazaar became a permanent market, and the market a city which arose on a grand scale, broad and lofty, on two rocky heights, which jut out towards the sea from the plateau of the desert. This city was called Cyrene. . . . Large numbers of population immigrated from Crete, the islands and Peloponnesus. A large amount of new land was parcelled out, the Libyans were driven back, the landing-place became the port of Apollonia, and the territory occupied by the city itself was largely extended. Cyrene became, like Massalia, the starting point of a group of settlements, the centre of a small Greece: Barca and Hesperides [afterwards called Berenice] were her daughters. Gradually a nation grew up, which extended itself and its agriculture, and contrived to cover a large division of African land with Hellenic culture. This was the new era which commenced for Cyrene with the reign of the third king, the Battus who, on account of the marvellously rapid rise of his kingdom, was celebrated as 'the fortunate' in all

Hellas. The Battidae [the family or dynasty of Battas] were soon regarded as a great power."—E. Curtius, *Hist. of Greece*, bk. 2, ch. 3.—Cyrenaica became subject to Egypt under the Ptolemys, and was then usually called Pentapolis, from the five cities of Cyrene, Apollonia, Arsinoë (formerly Teuchira), Berenice (formerly Hesperis, or Hesperides) and Ptolemais (the port of Barca). Later it became a province of the Roman Empire, and finally, passing under Mahometan rule, sank to its present state, as a district, called Barca, of the kingdom of Tripoli.—Cyrene was especially famous for the production of a plant called silphium—supposed to be assafœtida—on which the ancients seem to have set an extraordinary value. This was one of the principal sources of the wealth of Cyrene.—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 8, sect. 1, and ch. 12, sect. 2.

B. C. 97.—Transferred to the Romans by will.—"In the middle of this reign [of Ptolemy, called Lathyrus, king of Egypt] died Ptolemy Apion, king of Cyrene. He was the half-brother of Lathyrus and Alexander, and having been made king of Cyrene by his father Euergetes II., he had there reigned quietly for twenty years. Being between Egypt and Carthage, then called the Roman province of Africa, and having no army which he could lead against the Roman legions, he had placed himself under the guardianship of Rome; he had bought a truce during his lifetime, by making the Roman people his heirs in his will, so that on his death they were to have his kingdom. Cyrene had been part of Egypt for above two hundred years, and was usually governed by a younger son or brother of the king. But on the death of Ptolemy Apion,

the Roman senate, who had latterly been grasping at everything within their reach, claimed his kingdom as their inheritance, and in the flattering language of their decree by which the country was enslaved, they declared Cyrene free."—S. Sharpe, *Hist. of Egypt*, ch. 11.

B. C. 74.—Siege by Mithridates.—Cyzicus, which had then become one of the largest and wealthiest cities of Asia Minor, was besieged for an entire year (B. C. 74–73) by Mithridates in the third Mithridatic war. The Roman Consul Lucullus came to the relief of the city and succeeded in gaining a position which blockaded the besiegers and cut off their supplies. In the end, Mithridates retreated with a small remnant only, of his great armament, and never recovered from the disaster.—G. Long, *Decline of the Roman Republic*, v. 3, ch. 1.

DACIA, The Dacians.—Ancient Dacia embraced the district north of the Danube between the Theiss and the Dneister. "The Dacians [at the time of Augustus, in the last half century B. C.] occupied the whole of what now forms the southern part of Hungary, the Banat and Transylvania. . . . The more prominent part which they henceforth assumed in Roman history was probably owing principally to the immediate proximity in which they now found themselves to the Roman frontier. The question of the relation in which the Dacians stood to the Getæ, whom we find in possession of these same countries at an earlier period, was one on which there existed considerable difference of opinion among ancient writers: but the prevailing conclusion was that they were only different names applied to the same people. Even Strabo, who describes them as distinct, though cognate tribes, states that they spoke the same language. According to his distinction the Getæ occupied the more easterly regions, adjoining the Euxine, and the Dacians the western, bordering on the Germans."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 20, sect. 1.

A. D. 102–106.—Trajan's conquest.—At the beginning of the second century, when Trajan conquered the Dacians and added their country to the Roman Empire, "they may be considered as occupying the broad block of land bounded by the Theiss, the Carpathians, the lower Danube or Ister, and the Pruth." In his first campaign, A. D. 102, Trajan penetrated the country to the heart of modern Transylvania, and forced the Dacians to give him battle at a place called Tapæ, the site of which is not known. He routed them with much slaughter, as they had been routed at the same place, Tapæ, sixteen years before, in one of the ineffectual campaigns directed by Domitian. They submitted, and Trajan established strong Roman posts in the country; but he had scarcely reached Rome and celebrated his triumph there, before the Dacians were again in arms. In the spring of the year 104, Trajan repaired to the lower Danube in person, once more, and entered the Dacian country with an overwhelming force. This time the subjugation was complete, and the Romans established their occupation of the country by the founding of colonies and the building of roads. Dacia was now made a Roman province, and "the language of the Empire became,

and to this day substantially remains, the national tongue of the inhabitants. . . . Of the Dacian province, the last acquired and the first to be surrendered of the Roman possessions, if we except some transient occupations, soon to be commemorated, in the East, not many traces now exist; but even these may suffice to mark the moulding power of Roman civilization. . . . The accents of the Roman tongue still echo in the valleys of Hungary and Wallachia; the descendants of the Dacians at the present day repudiate the appellation of Wallachs, or strangers, and still claim the name of Romûni.—C. Merivale, *Hist. of the Romans*, ch. 63.

DALRIADA.—“A district forming the north-east corner of Ireland and comprising the north half of the county of Antrim, was called Dalriada. It appears to have been one of the earliest settlements of the Scots among the Picts of Ulster and to have derived its name from its supposed founder Cairbre, surnamed Righfhada or Riada. It lay exactly opposite the peninsula of Kintyre; and from this Irish district the colony of Scots, which was already Christian [5th century] passed over and settled in Kintyre and in the island of Isla”—establishing a Scotch Dalriada.—W. F. Skene, *Celtic Scotland*, bk. 1, ch. 3.—For some account of the Scotch Dalriada, see **SCOTLAND**: 7TH CENTURY.

DAMARALAND. See **GERMAN SOUTH-WEST AFRICA**.

DAMASCUS, Kingdom of.—The kingdom of Damascus, or "Arām of Damascus" as it was entitled, was formed soon after that Syrian region threw off the yoke of dependence which David and Solomon had imposed upon it. "Rezon, the outlaw, was its founder. Hader, or Hadad, and Rimmon, were the chief divinities of the race, and from them the line of its kings derived their names.—Hadad, Ben-hadad, Hadad-ezer, Tabrimmon."—Dean Stanley, *Lects. on the Hist. of the Jewish Church*, lect. 33.—"Though frequently captured and plundered in succeeding centuries by Egypt and Assyria, neither of those nations was able to hold it long in subjection because of the other. It was probably a temporary repulse of the Assyrians, under Shalmaneser II., by the Damascene general Naaman to which reference is made in 2 Kings v. 1: 'by him the Lord had given deliverance unto Syria.' . . . After the great conquerors of Egypt and Asia, each in his day, had captured and plundered Damascus, it was taken without resistance by Parmenio for Alexander the Great [B. C. 333]. In it Pompey spent the proudest year of his life, 64 B. C., distributing at his pleasure the thrones of the East to the vassals of Rome. Cleopatra had received the city as a love-gift from Mark Antony, and Tiberius had bestowed it upon Herod the Great, before Aretas of Petra, the father of the princess whom Herod Antipas divorced for Herodias's sake, and the ruler whose officers watched the city to prevent the escape of Paul, made it, we know not how, a part of his dominions."—W. B. Wright, *Ancient Cities*, ch. 7.

A. D. 1252.—Destruction by the Mamelukes.—"Two years after the deliverance of the king [Saint Louis], and whilst he was still in Palestine, the Mamelukes, fearing a fresh invasion of the Franks, in order to prevent their enemies from taking Damietta and fortifying themselves in that city, entirely destroyed it. Some years after, as their fears were not yet removed, and the second crusade of Louis IX. spread fresh alarms throughout the East, the Egyptians caused immense heaps of stone to be cast into the mouth of the Nile, in order that the Christian fleets might not be able to sail up the river. Since that period a new Damietta has been built at a small distance from the site of the former city."—J. F. Michaud, *Hist. of the Crusades*, bk. 14.

DAMNONIA. See BRITAIN: 6TH CENTURY.

DAMNONII, OR DAMNII, The. See DAMNONII.

DAMOISEL. — DAMOISELLE. — DONZELLO.—"In mediæval Latin 'domicella' is used for the unmarried daughter of a prince or noble, and 'domicellus,' contracted from 'domnicellus,' the diminutive of 'dominus,' for the son. These words are the forerunners of the old French 'dâmoisel' in the masculine, and 'damoiselle' in the feminine gender. Froissart calls Richard, prince of Wales, son of Edward: 'le jeune damoisil Richart.' In Romance the word is indifferently 'damoiseil' and 'danzel,' in Italian 'donzello.' All of these are evidently titles under the same notion as that of child and 'enfant,' of which the idea belongs to the knights of an earlier period."—R. T. Hampson, *Origines Patricia*, p. 328.

DAR-UL-ISLAM AND DAR-UL-HARB.—“The Koran divides the world into two portions, the House of Islam, Dar-ul-Islam, and the House of War, Dar-ul-harb. It has generally been represented by Western writers on the institutes of Mahometanism and on the habits of Mahometan nations, that the Dar-ul-harb, the House of War, comprises all lands of the misbelievers. . . . There is even a widely-spread idea among superficial talkers and writers that the holy hostility, the Jihad [or Dhihad] of Mussulmans against non-Mussulmans is not limited to warfare between nation and nation; but that ‘it is a part of the religion of every Mahometan to kill as many Christians as possible, and that by counting up a certain number killed, they think themselves secure of heaven.’ But careful historical investigators, and statesmen long practically conversant with Mahometan populations have exposed the fallacy of such charges against those who hold the creed of Islam. . . . A country which is under Christian rulers, but in which Mahometans are allowed free profession of their faith, and peaceable exercise of their ritual, is not a portion of the House of War, of the Dar-ul-harb; and there is no religious duty of warfare, no Jihad, on the part of true Mussulmans against such a state. This has been of late years formally determined by the chief authorities in Mahometan law with respect to British India.”—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 6.

DASTAGERD.—The favorite residence of the last great Persian king and conqueror, Chosroes (A. D. 590-628), was fixed at Dastagerd, or Artemita, sixty miles north of Ctesiphon, and east of the Tigris. His palaces and pleasure grounds were of extraordinary magnificence.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 46.

DASYUS. See INDIA: THE ABORIGINAL INHABITANTS.

DAUPHINS OF FRANCE.—DAUPHINE.—In 1349, Philip VI., or Philip de Valois, of France, acquired by purchase from Humbert II., count of Vienne, the sovereignty of the province of Dauphiné. This principality became from that time the appanage of the eldest sons of the kings of France and gave them

their peculiar name or title of the Dauphins. The title in question had been borne by the counts of Vienne (in Dauphiné), “on account of the dolphin which they carried upon their helmets and on their armorial bearings.”—E. De Bonnechose, *Hist. of France*, bk. 2, ch. 2, footnote.

DEBT, Laws concerning: Ancient Greek.—At Athens, in the time of Solon (6th century, B. C.) the Thetes—“the cultivating tenants, metayers and small proprietors of the country . . . are exhibited as weighed down by debts and dependence, and driven in large numbers out of a state of freedom into slavery—the whole mass of them (we are told) being in debt to the rich, who were proprietors of the greater part of the soil. They had either borrowed money for their own necessities, or they tilled the lands of the rich as dependent tenants, pay-

ing a stipulated portion of the produce, and in this capacity they were largely in arrear. All the calamitous effects were here seen of the old harsh law of debtor and creditor—once prevalent in Greece, Italy, Asia, and a large portion of the world—combined with the recognition of slavery as a legitimate status, and of the right of one man to sell himself as well as that of another man to buy him. Every debtor unable to fulfil his contract was liable to be adjudged as the slave of his creditor, until he could find means either of paying it or working it out; and not only he himself, but his minor sons and unmarried daughters and sisters also, whom the law gave him the power of selling. The poor man thus borrowed upon the security of his body (to translate literally the Greek phrase) and upon that of the persons in his family. So severely had these oppressive contracts been enforced, that many debtors had been reduced from freedom to slavery in Attica itself,—many others had been sold for exportation,—and some had only hitherto preserved their own freedom by selling their children. . . . To their relief Solon's first measure, the memorable *Seisachtheia*, shaking off of burthens, was directed. The relief which it afforded was complete and immediate. It cancelled at once all those contracts in which the debtor had borrowed on the security either of his person or of his land: it forbade all future loans or contracts in which the person of the debtor was pledged as security: it deprived the creditor in future of all power to imprison, or enslave, or extort work from, his debtor, and confined him to an effective judgment at law authorizing the seizure of the property of the latter. It swept off all the numerous mortgage pillars from the landed properties in Attica, leaving the land free from all past claims. It liberated and restored to their full rights all debtors actually in slavery under previous legal adjudication; and it even provided the means (we do not know how) of re-purchasing in foreign lands, and bringing back to a renewed life of liberty in Attica, many insolvents who had been sold for exportation. And while Solon forbade every Athenian to pledge or sell his own person into slavery, he took a step farther in the same direction by forbidding him to pledge or sell his son, his daughter, or an unmarried sister under his tutelage—excepting only the case in which either of the latter might be detected in unchastity. . . . One thing is never to be forgotten in regard to this measure, combined with the concurrent amendments introduced by Solon in the law—it settled finally the question to which it referred. Never again do we hear of the law of debtor and creditor as disturbing Athenian tranquility. The general sentiment which grew up at Athens, under the Solonian money-law and under the democratical government, was one of high respect for the sanctity of contracts. . . . There can be little doubt that under the Solonian law, which enabled the creditor to seize the property of his debtor, but gave him no power over the person, the system of money-lending assumed a more beneficial character.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 11 (p. 3).

Ancient Roman.—“The hold of the creditor was on the person of the debtor. The obligation of a debt was a tying up or binding, or bondage, of the person: the payment was a solution, a loosing or release of the person from that

bondage. The property of the debtor was not a pledge for the debt. It could be made so by special agreement, though in the earliest law only by transferring it at once to the ownership of the creditor. Without such special agreement, the creditor whose debtor failed to pay could not touch his property. Even when the debtor had been prosecuted and condemned to pay, if he still failed, the creditor could not touch his property. He could seize his person—I speak now of the early law, in the first centuries of the republic—and after holding him in rigorous confinement for sixty days, with opportunities, however, either to pay himself or get somebody to pay for him, if payment still failed, he could sell him as a slave, or put him to death; if there were several creditors, they could cut his body into pieces and divide it among them. This extreme severity was afterward softened; but the principle remained long unchanged, that the hold of the creditor was on the person of the debtor. If the debtor obstinately and to the last refused to surrender his property, the creditor could not touch it.”—J. Hadley, *Introd. to Roman Law*, lect. 10. —“During the first half of the Samnite war [B. C. 326–304], but in what year is uncertain, there was passed that famous law which prohibited personal slavery for debt. No creditor might for the future attach the person of his debtor, but he might only seize his property; and all those whose personal freedom was pledged for their debts (*nexi*), were released from their liability, if they could swear that they had property enough to meet their creditor's demands. It does not appear that this great alteration in the law was the work of any tribune, or that it arose out of any general or deliberate desire to soften the severity of the ancient practice. It was occasioned, we are told, by one scandalous instance of abuse of power on the part of a creditor. . . . But although personal slavery for debt was thus done away with, yet the consequences of insolvency were much more serious at Rome than they are in modern Europe. He whose property had once been made over to his creditors by the prætor's sentence, became, *ipso facto*, infamous; he lost his tribe, and with it all his political rights; and the forfeiture was irrevocable, even though he might afterwards pay his debts to the full; nor was it even in the power of the censors to replace him on the roll of citizens. So sacred a thing did credit appear in the eyes of the Romans.”—T. Arnold, *Hist. of Rome*, ch. 32 (v. 2).

In England.—“Debt has been regarded as a crime by primitive society in every part of the world. In Palestine, as in Rome, the creditor had power over the person of the debtor, and misfortune was commonly treated with a severity which was not always awarded to crime [Levit. xxv., 39–41, and 2 Kings iv., 1]. In this country [England] the same system was gradually introduced in Plantagenet times. The creditor, who had been previously entitled to seize the goods, or even the land of the debtor, was at last authorised to seize his person. In one sense, indeed, the English law was, in this respect, more irrational than the cruel code of the Jews, or the awful punishment [death and dismemberment or slavery—Gibbon, ch. 44] which the law of the Twelve Tables reserved for debtors. In Palestine the creditor was, at

least, entitled to the service of the debtor or of his children, and the slave had the prospect of an Insolvent Debtor's Relief Act in the Sabbatical year. Even the law of the Twelve Tables allowed the creditors to sell the debtor into slavery, instead of resorting to the horrible alternative of partitioning his body. But in England the creditors had no such choice. They had nothing to do but to throw the debtor into prison; and by his imprisonment deprive themselves of the only chance of his earning money to pay their debts. A law of this kind was intolerable to a commercial people. The debtor languished in gaol, the creditor failed to obtain payment of his debt. When trade increased in Tudor times, the wits of legislators were exercised in devising some expedient for satisfying the creditor without imprisoning the debtor. The Chancellor was authorised to appoint commissioners empowered to divide the debtor's property among the creditors. By an Act of Anne the debtor who complied with the law was released from further liability, and was practically enabled to commence life anew. In 1826, a debtor was allowed to procure his own bankruptcy; while in 1831, commissioners were appointed to carry out the arrangements which had been previously conducted under the Court of Chancery. The law of bankruptcy which was thus gradually developed by the legislation of three centuries only applied to persons in trade. No one who was not a trader could become a bankrupt; the ordinary debtor became as a matter of course an insolvent, and passed under the insolvent laws. The statutes, moreover, omitted to give any very plain definition of a trader. The distinction between trader and non-trader which had been gradually drawn by the Courts was not based on any very clear principle. A person who made bricks on his own estate of his own clay was not a trader; but a person who bought the clay and then made the bricks was a trader. Farmers, again, were exempt from the bankruptcy law; but farmers who purchased cattle for sale at a profit were liable to it. The possibility, moreover, of a trader being made a bankrupt depended on the size of his business. A petitioning creditor in bankruptcy was required to be a person to whom at least £100 was due; if two persons petitioned, their debts were required to amount to £150; if more than two persons petitioned, to £200. A small shopkeeper, therefore, who could not hope to obtain credit for £200, £150, or £100, could not become a bankrupt; he was forced to become an insolvent. The treatment of the insolvent was wholly different from that of the bankrupt. The bankruptcy law was founded on the principle that the goods and not the person of the debtor should be liable for the debt; the insolvency law enabled the person of the debtor to be seized, but provided no machinery for obtaining his goods. . . . Up to 1838 the first step in insolvency was the arrest of the debtor. Any person who made a deposition on oath that some other person was in debt to him, could obtain his arrest on what was known as 'mesne process.' The oath might possibly be untrue; the debt might not be due; the warrant issued on the sworn deposition as a matter of course. But, in addition to the imprisonment on mesne process, the insolvent could be imprisoned for a further period on what was known as 'final process.'

Imprisonment on mesne process was the course which the creditor took to prevent the flight of the debtor; imprisonment on final process was the punishment which the Court awarded to the crime of debt. Such a system would have been bad enough if the debtors' prisons had been well managed. The actual condition of these prisons almost exceeds belief. Dickens, indeed, has made the story of a debtor's imprisonment in the Marshalsea familiar to a world of readers. . . . The Act of 1813 had done something to mitigate the misery which the law occasioned. The Court which was constituted by it released 50,000 debtors in 13 years. But large numbers of persons were still detained in prison for debt. In 1827 nearly 6,000 persons were committed in London alone for debt. The Common Law Commissioners, reporting in 1830, declared that the loud and general complaints of the law of insolvency were well founded; and Cottenham, in 1838, introduced a bill to abolish imprisonment for debt in all cases. The Lords were not prepared for so complete a remedy; they declined to abolish imprisonment on final process, or to exempt from imprisonment on mesne process, persons who owed more than £20, and who were about to leave the country. Cottenham, disappointed at these amendments, decided on strengthening his own hands by instituting a fresh inquiry. He appointed a commission in 1839, which reported in 1840, and which recommended the abolition of imprisonment on final process, and the union of bankruptcy and insolvency. In 1841, in 1842, in 1843, and in 1844 Cottenham introduced bills to carry out this report. The bills of 1841, 1842, and 1843 were lost. The bill of 1844 was not much more successful. Brougham declared that debtors who refused to disclose their property, who refused to answer questions about it, who refused to give it up, or who fraudulently made away with it, as well as debtors who had been guilty of gross extravagance, deserved imprisonment. He introduced an alternative bill giving the Court discretionary power to imprison them. The Lords, bewildered by the contrary counsels of two such great lawyers as Cottenham and Brougham, decided on referring both bills to one Select Committee. The Committee preferred Brougham's bill, amended it, and returned it to the House. This bill became ultimately law. It enabled both private debtors and traders whose debts amounted to less than the sums named in the Bankruptcy Acts to become bankrupts; and it abolished imprisonment in all cases where the debt did not exceed £20.—S. Walpole, *Hist. of Eng. from 1815, ch. 17 (v. 4).*

In the United States.—"In New York, by the act of April 26, 1831, c. 300, and which went into operation on March 1st, 1832, arrest and imprisonment on civil process at law, and on execution in equity founded upon contract, were abolished. The provision under the act was not to apply to any person who should have been a non-resident of the state for a month preceding (and even this exception was abolished by the act of April 25th, 1840); nor to proceedings as for a contempt to enforce civil remedies; nor to actions for fines and penalties; nor to suits founded in torts . . . nor on promises to marry; or for moneys collected by any public officer; or for misconduct or neglect in office, or in any professional employment. The plaintiff, however,

in any suit, or upon any judgment or decree, may apply to a judge for a warrant to arrest the defendant, upon affidavit stating a debt or demand due, to more than \$50; and that the defendant is about to remove property out of the jurisdiction of the court, with intent to defraud his creditors; or that he has property or rights in action which he fraudulently conceals; or public or corporate stock, money, or evidences of debt, which he unjustly refuses to apply to the payment of the judgment or decree in favor of the plaintiff; or that he has assigned, or is about to assign or dispose of his property, with intent to defraud his creditors; or has fraudulently contracted the debt, or incurred the obligation respecting which the suit is brought. If the judge shall be satisfied, on due examination, of the truth of the charge, he is to commit the debtor to jail, unless he complies with certain prescribed conditions or some one of them, and which are calculated for the security of the plaintiff's claim. Nor is any execution against the body to be issued on justices' judgments, except in cases essentially the same with those above stated.

. . . By the New York act of 1846, c. 150, the defendant is liable for imprisonment as in actions for wrong, if he be sued and judgment pass against him in actions on contracts for moneys received by him (and it applies to all male persons) in a fiduciary character. The legislature of Massachusetts, in 1834 and 1842, essentially abolished arrest and imprisonment for debt, unless on proof that the debtor was about to abscond. As early as 1790, the constitution of Pennsylvania established, as a fundamental principle, that debtors should not be continued in prison after surrender of their estates in the mode to be prescribed by law, unless in cases of a strong presumption of fraud. In February, 1819, the legislature of that state exempted women from arrest and imprisonment for debt; and this provision as to women was afterwards applied in New York to all civil actions founded upon contract. . . . Females were first exempted from imprisonment for debt in Louisiana and Mississippi; and imprisonment for debt, in all cases free from fraud, is now abolished in each of those states. The commissioners in Pennsylvania, in their report on the Civil Code, in January, 1835, recommended that there be no arrest of the body of the debtor on mesne process, without an affidavit of the debt, and that the defendant was a non-resident, or about to depart without leaving sufficient property, except in cases of force, fraud, or deceit, verified by affidavit. This suggestion was carried into effect by the act of the legislature of Pennsylvania of July 12th, 1842, entitled 'An Act to abolish imprisonment for debt, and to punish fraudulent debtors.' In New Hampshire, imprisonment on mesne process and execution for debt existed under certain qualifications, until December 23, 1840, when it was abolished by statute, in cases of contract and debts accruing after the first of March, 1841. In Vermont, imprisonment for debt, on contracts made after first January, 1839, is abolished, as to resident citizens, unless there be evidence that they are about to abscond with their property; so, also, the exception in Mississippi applies to cases of torts, frauds, and meditated concealment, or fraudulent disposition of property."—J. Kent, *Commentaries on American Law*; ed. by O. W. Holmes, Jr., v. 2 (foot-note).—"In

many states the Constitution provides (A) that there shall be no imprisonment for debt: Ind. C. 1, 22; Minn. C. 1, 12; Kan. C. B. Rts. 16; Md. C. 3, 38; N. C. C. 1, 16; Mo. C. 2, 16; Tex. C. 1, 18; Ore. C. 1, 19; Nev. C. 1, 14; S. C. C. 1, 20; Ga. C. 1, 1, 21; Ala. C. 1, 21; Miss. C. 1, 11; Fla. C. Decl'n Rts. 15. (B) That there shall be no imprisonment for debt (1) in any civil action on mesne or final process, in seven states: O. C. 1, 15; Io. C. 1, 19; Neb. C. 1, 20; Tenn. C. 1, 18; Ark. C. 2, 16; Cal. C. 1, 15; Ore. C. 1, 15; Ariz. B. Rts. 18. (2) In any action or judgment founded upon contract, in three states: N. J. C. 1, 17; Mich. C. 6, 33; Wis. C. 1, 16. (C) In case, that there shall be no person imprisoned for debt in any civil action when he has delivered up his property for the benefit of his creditors in the manner prescribed by law: Vt. C. 2, 33; R. I. C. 1, 11; Pa. C. 1, 16; Ill. C. 2, 12; Ky. C. 13, 19; Col. C. 2, 12. . . . But the above principles are subject to the following exceptions in the several states respectively: (1) a debtor may be imprisoned in criminal actions: Tenn. So (2) for the non-payment of fines or penalties imposed by law: Mo. So (3) generally, in civil or criminal actions, for fraud: Vt., R. I., N. J., Pa., O., Ind., Ill., Mich., Io., Minn., Kan., Neb., N. C., Ky., Ark., Cal., Ore., Nev., Col., S. C., Fla., Ariz. And so, in two, the legislature has power to provide for the punishment of fraud and for reaching property of the debtor concealed from his creditors: Ga. C. 1, 2, 6; La. C. 223. So (4) absconding debtors may be imprisoned: Ore. Or debtors (5) in cases of libel or slander: Nev. (6) In civil cases of tort generally: Cal., Col. (7) In cases of malicious mischief: Cal. (8) Or of breach of trust: Mich., Ariz. (9) Or of moneys collected by public officers, or in any professional employment: Mich., Ariz."—F. J. Stimson, *Am. DECLARATION OF PARIS, The.—"At the Congress of Paris in 1856, subsequently to the conclusion of the treaty, which ended the Crimean war [see RUSSIA: A. D. 1854-1856], a declaration of principles was signed on April 16th, by the plenipotentiaries of all the powers represented there, which contained four articles.

'First, Privateering is and remains abolished. Second, The neutral flag covers enemies' goods, with the exception of contraband of war. Third, Neutral goods, 'except of contraband of war, are not liable to capture under an enemy's flag. Fourth, Blockades, to be binding, must be effective—that is to say, maintained by a force really sufficient to prevent access to the coast of the enemy.' The adherence of other powers was requested to these principles," and all joined in signing it except the United States, Spain, and Mexico. The objection on the part of the United States was stated in a circular letter by Mr. Marcy, then Secretary of State, who "maintained that the right to resort to privateers is as incontestable as any other right appertaining to belligerents; and reasoned that the effect of the declaration would be to increase the maritime preponderance of Great Britain and France, without even benefiting the general cause of civilization; while, if public ships retained the right of capturing private property, the United States, which had at that time a large mercantile marine and a comparatively small navy, would be deprived of all means of retaliation. . . . The President proposes, therefore [wrote Mr. Marcy] to add to the first proposition contained in the declaration of the Congress of Paris the following words: 'and that the private property of the subjects and citizens of a belligerent on the high seas shall be exempted from seizure by public armed vessels of the other belligerent, except it be contraband.' . . . Among the minor states of Europe there was complete unanimity and a general readiness to accept our amendment to the rules"; but England opposed, and the offered amendment was subsequently withdrawn. "Events . . . have shown that . . . our refusal to accept the Declaration of Paris has brought the world nearer to the principles which we proposed, which became known as the 'Marcy amendment for the abolition of war against private property on the seas.'"—E. Schuyler, *American Diplomacy*, ch. 7.

DEDITITIUS.—COLONUS.—SERVUS.—"The poor Provincial [of the provinces of the Roman empire at the time of the breaking up in the fifth century] who could not fly to the Goths because his whole property was in land, hunted to despair by the tax-gatherer, would transfer that land to some wealthy neighbour, apparently on condition of receiving a small life annuity out of it. He was then called the Dediti-

tius (or Surrenderer) of the new owner, towards whom he stood in a position of a certain degree of dependence. Not yet, however, were his sorrows or those of his family at an end, for the tax-gatherer still regarded him as responsible for his land. . . . On his death his sons, who had utterly lost their paternal inheritance, and still found themselves confronted with the claim for taxes, were obviously without resource. The next stage of the process accordingly was that they abdicated the position of free citizens and implored the great man to accept them as Coloni, a class of labourers, half-free, half-enslaved, who may perhaps with sufficient accuracy be compared to the serfs 'adscripti glebæ' of the middle ages. . . . Before long they became mere slaves (Servi) without a shadow of right or claim against their new lords."—T. Hodgkin, *Italy and her Invaders*, bk. 1, ch. 10.—With the "increase of great estates and simultaneous increase in the number of slaves (so many Goths were made slaves by Claudius [A. D. 268-270], to give one instance, that there was not a district without them), the small proprietors could no longer maintain the fruitless struggle, and, as a class, wholly disappeared. Some, no doubt, became soldiers; others crowded into the already overflowing towns; while others voluntarily resigned their freedom, attached themselves to the land of some rich proprietor, and became his villeins, or coloni. But this was not the chief means by which this class was formed and increased. . . . After a successful war these serfs were given . . . to landed proprietors without payment; and in this way not only was the class of free peasants diminished or altogether destroyed—a happier result—the slave system was directly attacked. The coloni themselves were not slaves. The codes directly distinguish them from slaves, and in several imperial constitutions they are called 'ingenui.' They could contract a legal marriage and could hold property. . . . On the other hand, the coloni were like slaves in that they were liable to personal punishment. . . . A colonus was indissolubly attached to the land, and could not get quit of the tie, even by enlisting as a soldier. The proprietor could sell him with the estate, but had no power whatever of selling him without it; and if he sold the estate, he was compelled to sell the coloni along with it. . . . The position of these villeins was a very miserable one. . . . These coloni in Gaul, combined together, were joined by the free peasants still left [A. D. 287], whose lot was not less wretched than their own, and forming into numerous bands, spread themselves over the country to pillage and destroy. They were called Bagaudæ, from a Celtic word meaning a mob or riotous assembly; and under this name recur often in the course of the next century both in Gaul and Spain."—W. T. Arnold, *The Roman System of Provincial Administration*, ch. 4.

DELATION.—DELATORS.—Under the empire, there was soon bred at Rome an infamous class of men who bore a certain resemblance—with significant contrasts likewise—to the sycophants of Athens. They were known as delators, and their occupation was delation. "The delator was properly one who gave notice to the fiscal officers of moneys that had become due to the treasury of the state, or more strictly to the emperor's fiscus." But the title was extended to informers generally, who dragged their fellow-citizens before the tribunals for alleged violations of law. Augustus made delation a profession by attaching rewards to the information given against transgressors of his marriage laws. Under the successor of Augustus, the sullen and suspicious Tiberius, delation received its greatest encouragement and development. "According to the spirit of Roman criminal procedure, the informer and the pleader were one and the same person. There was no public accuser, . . . but the spy who discovered the delinquency was himself the man to demand of the senate, the prætor or the judge, an opportunity of proving it by his own eloquence and ingenuity. The odium of prosecution was thus removed from the government to the private delator."—C. Merivale, *Hist. of the Romans*, ch. 44.—See, also, ROME: A. D. 14-37.

DELAWARE BAY: A. D. 1609.—Discovered by Henry Hudson. See AMERICA: A. D. 1609.

The error perpetuated in its name.—"Almost every writer on American history that I have met with appears to have taken pains to perpetuate the stereotyped error that 'Lord Delawarr touched at this bay in his passage to Virginia in 1610.' . . . Lord Delawarr himself, in his letter of the 7th of July, 1610, giving an account of his voyage to Virginia, not only makes no mention of that bay, or of his approaching it, but expressly speaks of his first reaching the American coast on the '6th of June, at what time we made land to the southward of our harbor, the Chesipioc Bay.' The first European who is really known to have entered the bay, after Hudson, was Capt. Samuel Argall [July 1610]. . . . The name of Lord Delawarr, however, seems to have been given to the bay soon afterwards by the Virginians."—J. R. Brodhead, *Hist. of the State of N. Y.*, v. 1, app., note D.

DELAWARE: A. D. 1629-1631.—The Dutch occupancy and first settlement.—The first attempt at settlement on the Delaware was made by the Dutch, who claimed the country in right of Hudson's discovery and Mey's exploration of the Bay, notwithstanding the broad English claim, which covered the whole of it as part of an indefinite Virginia. In 1629, pursuant to the patroon ordinance of the Dutch West India Company, which opened New Netherland territory to private purchasers, "Samuel Godyn and Samuel Blommaert, both directors of the Amsterdam Chamber, bargained with the natives for the soil from Cape Henlopen to the mouth of

Delaware river; in July, 1630, this purchase of an estate more than thirty miles long was ratified at Fort Amsterdam by Minuit [then Governor of New Netherland] and his council. It is the oldest deed for land in Delaware, and comprises the water-line of the two southern counties of that state. . . . A company was soon formed to colonize the tract acquired by Godyn and Blommaert. The first settlement in Delaware, older than any in Pennsylvania, was undertaken by a company, of which Godyn, Van Rensselaer, Blommaert, the historian De Laet, and a new partner, David Petersen de Vries, were members. By joint enterprise, in December, 1630, a ship of 18 guns, commanded by Pieter Heyes, and laden with emigrants, store of seeds, cattle and agricultural implements, embarked from the Texel, partly to cover the southern shore of Delaware Bay with fields of wheat and tobacco, and partly for a whale fishery on the coast. . . . Early in the spring of 1631, the . . . vessel reached its destination, and just within Cape Henlopen, on Lewes Creek, planted a colony of more than thirty souls. The superintendence of the settlement was intrusted to Gillis Hosset. A little fort was built and well beset with palisades; the arms of Holland were affixed to a pillar; the country received the name Swaanendael; the water that of Godyn's Bay. The voyage of Heyes was the cradling of a state. That Delaware exists as a separate commonwealth is due to this colony. According to English rule, occupancy was necessary to complete a title to the wilderness; and the Dutch now occupied Delaware. On the 5th of May, Heyes and Hosset, in behalf of Godyn and Blommaert, made a further purchase from Indian chiefs of the opposite coast of Cape May, for twelve miles on the bay, on the sea, and in the interior; and, in June, this sale of a tract twelve miles square was formally attested at Manhattan. Animated by the courage of Godyn, the patroons of Swaanendael fitted out a second expedition under the command of De Vries. But, before he set sail, news was received of the destruction of the fort, and the murder of its people. Hasset, the commandant, had caused the death of an Indian chief; and the revenge of the savages was not appeased till not one of the emigrants remained alive. De Vries, on his arrival, found only the ruins of the house and its palisades, half consumed by fire, and here and there the bones of the colonists."—G. Bancroft, *Hist. of the U. S.*, pt. 2, ch. 13 (v. 1).

A. D. 1638-1640.—The planting of the Swedish colony.—"William Usselinx, a distinguished merchant in Stockholm, was the first to propose to the Swedish government a scheme for planting a colony in America. He was a native of Antwerp, and had resided in Spain, Portugal and the Azores, at a time when the spirit of foreign adventure pervaded every class of society. . . . In the year 1624 he proposed to the Swedish monarch, Gustavus Adolphus, a plan for the organization of a trading company, to extend its operations to Asia, Africa, America and Terra Magellanica. . . . Whether

Usselinx had ever been in America is uncertain, but he had, soon after the organization of the Dutch West India Company, some connection with it, and by this and other means was able to give ample information in relation to the country bordering on the Delaware, its soil, climate, and productions. . . . His plan and contract were translated into the Swedish language by Schrader, the royal interpreter, and published to the nation, with an address strongly appealing both to their piety and their love of gain. The king recommended it to the States, and an edict dated at Stockholm, July 2d, 1626, was issued by royal authority, in which people of all ranks were invited to encourage the project and support the Company. Books were opened for subscription to the stock . . . and Gustavus pledged the royal treasure for its support to the amount of 400,000 dollars. . . . The work was ripe for execution, when the German war [the Thirty Years War], and afterwards the king's death, prevented it, and rendered the fair prospect fruitless. . . . The next attempt on the part of the Swedes to plant a colony in America was more successful. But there has been much difference among historians in relation to the period when that settlement was made. . . . It is owing to the preservation, among the Dutch records at Albany, of an official protest issued by Kieft, the Governor at New Amsterdam, that we do certainly know the Swedes were here in the spring of 1638. Peter Minuit, who conducted to our shore the first Swedish colony, had been Commercial Agent, and Director General of the Dutch West India Company, and Governor of the New Netherlands. . . . At this time Christina, the infant daughter of Gustavus Adolphus, had ascended the throne of Sweden. . . . Under the direction of Oxenstiern, the celebrated chancellor of Sweden, whose wisdom and virtue have shed a glory on the age in which he lived, the patent which had been granted in the reign of Gustavus to the company formed under the influence of Usselinx was renewed, and its privileges extended to the citizens of Germany. Minuit, being now out of employment, and probably deeming himself injured by the conduct of the Dutch Company [which had displaced him from the governorship of the New Netherlands, through the influence of the patroons, and appointed Wouter Van Twiller, a clerk, to succeed him], had determined to offer his services to the crown of Sweden. . . . Minuit laid before the chancellor a plan of procedure, urged a settlement on the Delaware, and offered to conduct the enterprise. Oxenstiern represented the case to the queen . . . and Minuit was commissioned to command and direct the expedition."—B. Ferris, *Hist. of the Original Settlements on the Delaware*, pt. 1, ch. 2-3.—"With two ships laden with provisions and other supplies requisite for the settlement of emigrants in a new country, and with fifty colonists, Minuit sailed from Sweden late in 1637, and entered Delaware Bay in April, 1638. He found the country as he had left it, without white inhabitants. Minqua Kill, now Wilmington, was selected as the place for the first settlement, where he bought a few acres of land of the natives, landed his colonists and stores, erected a fort, and began a small plantation. He had conducted his enterprise with some secrecy, that he might avoid collision with the Dutch; but the watchful eyes of their agents soon dis-

covered him, and reported his presence to the director at New Amsterdam. Kieft [successor to Van Twiller] had just arrived, and it became one of his first duties to notify a man who had preceded him in office that he was a trespasser and warn him off. Minuit, knowing that Kieft was powerless to enforce his protest, being without troops or money, paid no attention to his missive, and kept on with his work. . . . He erected a fort of considerable strength, named Christina, for the Swedish queen, and garrisoned it with 24 soldiers. Understanding the character of the Indians, he conciliated their sachems by liberal presents and secured the trade. In a few months he was enabled to load his ships with peltries and despatch them to his patrons. . . . The colony had to all appearance a promising future. . . . Within two years, however, their prospects were clouded. The Company had failed to send out another ship with supplies and merchandise for the Indian trade. Provisions failed, trade fell off, and sickness began to prevail. . . . They resolved to remove to Manhattan, where they could at least have 'enough to eat.' On the eve of 'breaking up' to carry their resolution into effect, succor came from an unexpected quarter. The fame of New Sweden, as the colony was called, of its fertile lands and profitable trade, had reached other nations of Europe. In Holland itself a company was formed to establish a settlement under the patronage of the Swedish Company." This Dutch company "freighted a ship with colonists and supplies, which fortunately arrived when the Swedish colony was about to be broken up and the country abandoned. The spirits of the Swedes were revived. . . . Their projected removal was indefinitely deferred and they continued their work with fresh vigor. The Dutch colonists were located in a settlement by themselves, only a few miles from Fort Christina. They were loyal to the Swedes. . . . In the autumn of the same year, 1640, Peter Hollaendare, who had been appointed deputy governor of the colony, and Moens Kling, arrived from Sweden with three ships laden with provisions and merchandise for the straitened colonists. They also brought out a considerable company of new emigrants. New Sweden was now well established and prosperous. More lands were bought, and new settlements were made. Peter Minuit died the following year."—G. W. Schuyler, *Colonial New York*, v. 1, introd., sect. 2.

A. D. 1640-1656.—The struggle between the Swedes and the Dutch and the final victory of the latter.—"The [Swedish] colony grew to such importance that John Printz, a lieutenant-colonel of cavalry, was sent out in 1642 as governor, with orders for developing industry and trade. He took pains to command the mouth of the river, although the Dutch had established Fort Nassau on its eastern bank, and the Swedish settlements were on the western bank exclusively. Collisions arose between the Dutch and the

Swedes, and when the former put up the arms of the States General on the completion of a purchase of lands from the Indians, Printz in a passion ordered them to be torn down. The Swedes gained in strength while the Dutch lost ground in the vicinity. In 1648 the Dutch attempted to build a trading post on the Schuylkill, when they were repulsed by force by the Swedes. Individuals seeking to erect houses were treated in the same way. The Swedes in turn set up a stockade on the disputed ground. Director Stuyvesant found it necessary in 1651 to go to confer with Printz with a view to holding the country against the aggressive English. The Indians were called into council and confirmed the Dutch title, allowing the Swedes little more than the site of Fort Christina. Fort Casimir was erected lower down the river, to protect Dutch interests. The two rulers agreed to be friends and allies, and so continued for three years. The distress of the Swedish colony led to appeals for aid from the home country whither Governor Printz had returned. In 1654 help was given, and a new governor, John Claude Rysingh, marked his coming by the capture of Fort Casimir, pretending that the Dutch West India Company authorized the act. The only revenge the Dutch could take was the seizure of a Swedish vessel which by mistake ran into Manhattan Bay. But the next year orders came from Holland exposing the fraud of Rysingh, and directing the expulsion of the Swedes from the South River. A fleet was organized and Director Stuyvesant recovered Fort Casimir without firing a gun. After some parley Fort Christina was also surrendered. Such Swedes as would not take the oath of allegiance to the Dutch authorities were sent to the home country. Only twenty persons accepted the oath, and of three clergymen two were expelled, and the third escaped like treatment by the sudden outbreak of Indian troubles. In 1656 the States General and Sweden made these transactions matter of international discussion. The Swedes presented a protest against the action of the Dutch, and it was talked over, but the matter was finally dropped. In the same year the West India Company sold its interests on the South River to the city of Amsterdam, and the colony of New Amstel was erected, so that the authority of New Netherland was extinguished."

A. D. 1664.—Conquest by the English, and annexation to New York.—"Five days after the capitulation of New Amsterdam [surrendered by the Dutch to the English, Aug. 29, 1664—see *NEW YORK*: A. D. 1664] Nicolls, with Cartwright and Maverick . . . commissioned their colleague, Sir Robert Carr, to go," with three ships and an adequate military force, "and reduce the Delaware settlements. Carr was instructed to promise the Dutch the possession of all their property and all their present privileges, 'only that they change their masters.' To the Swedes he was to 'remonstrate their happy return under a monarchical government, and his

majesty's good inclination to that nation.' To Lord Baltimore's officers in Maryland, he was to declare that their proprietor's pretended right to the Delaware being 'a doubtful case,' possession would be kept for the king 'till his majesty is informed and satisfied otherwise.' . . . The Swedes were soon made friends," but the Dutch attempted [October] some resistance, and yielded only after a couple of broadsides from the ships had killed three and wounded ten of their garrison. "Carr now landed . . . and claimed the pillage for himself as 'won by the sword.' Assuming an authority independent of Nicolls, he claimed to be the 'sole and chief commander and disposer' of all affairs on the Delaware." His acts of rapacity and violence, when reported to his fellow commissioners, at New York, were condemned and repudiated, and Nicolls, the presiding commissioner, went to the Delaware in person to displace him. "Carr was severely rebuked, and obliged to give up much of his ill-gotten spoil. Nevertheless, he could not be persuaded to leave the place for some time. The name of New Amstel was now changed to New Castle, and an infantry garrison established there. . . . Captain John Carr was appointed commander of the Delaware, in subordination to the government of New York, to which it was annexed 'as an appendage'; and thus affairs remained for several years."—J. R. Brodhead, *Hist. of the State of N. Y.*, v. 2, ch. 2.

A. D. 1691-1702.—The practical independence of Penn's "lower counties" acquired.—"In April, 1691, with the reluctant consent of William Penn, the 'territories,' or 'lower counties,' now known as the State of Delaware, became for two years a government by themselves under Markham. . . . The disturbance by Keith [see *PENNSYLVANIA*: A. D. 1692-1696] creating questions as to the administration of justice, confirmed the disposition of the English government to subject Pennsylvania to a royal commission; and in April 1693, Benjamin Fletcher, appointed governor by William and Mary, once more united Delaware to Pennsylvania." But Penn, restored to his authority in 1694, could not resist the jealousies which tended so strongly to divide the Delaware territories from Pennsylvania proper. "In 1702, Pennsylvania convened its legislature apart, and the two colonies were never again united. The lower counties became almost an independent republic; for, as they were not included in the charter, the authority of the proprietary over them was by sufferance only, and the executive power intrusted to the governor of Pennsylvania was too feeble to restrain the power of their people. The legislature, the tribunals, the subordinate executive officers of Delaware knew little of external control."—G. Bancroft, *Hist. of the U. S. (author's last revision)*, pt. 3, ch. 2 (v. 2).—The question of jurisdiction over Delaware was involved throughout in the boundary dispute between the proprietaries of Pennsylvania and Maryland. DELIAN CONFEDERACY. See GREECE: B. C. 478-477; and ATHENS: B. C. 466-454, and after.

DELIAN FESTIVAL. See DELOS.

DELIUM, Battle of (B. C. 424).—A serious defeat suffered by the Athenians in the Peloponnesian War, B. C. 424, at the hands of the Thebans and other Boeotians. It was consequent upon the seizure by the Athenians of the Boeotian temple of Delium—a temple of Apollo—on the sea-coast, about five miles from Tanagra, which they fortified and intended to hold. After

the defeat of the army which was returning from this exploit, the garrison left at Delium was besieged and mostly captured. Among the hoplites who fought at Delium was the philosopher Socrates. The commander Hippocrates was slain.—Thucydides, *History*, bk. 4, sect. 89-100.

ALSO IN: G. Grote, *Hist. of Greece*, pt. 2, ch. 53.—See GREECE: B. C. 424-421.

DELOS.—Delos, the smallest island of the group called the Cyclades, but the most important in the eyes of the Ionian Greeks, being their sacred isle, the fabled birthplace of Apollo and long the chief seat and center of his worship. "The Homeric Hymn to Apollo presents to us the island of Dēlos as the centre of a great periodical festival in honour of Apollo, celebrated by all the cities, insular and continental, of the Ionic name. What the date of this hymn is, we have no means of determining: Thucydides quotes it, without hesitation, as the production of Homer, and, doubtless, it was in his time universally accepted as such,—though modern critics concur in regarding both that and the other hymns as much later than the *Iliad* and *Odyssey*. It cannot probably be later than 600 B. C. The description of the Ionic visitors presented to us in this hymn is splendid and imposing; the number of their ships, the display of their finery, the beauty of their women, the athletic exhibitions as well as the matches of song and dance,—all these are represented as making an ineffaceable impression on the spectator: 'the assembled Ionians look as if they were beyond the reach of old age or death.' Such was the magnificence of which Dēlos was the periodical theatre, and which called forth the voices and poetical genius not merely of itinerant bards, but also of the Delian maidens in the temple of Apollo, during the century preceding 560 B. C. At that time it was the great central festival of the Ionians in Asia and Europe."—G. Grote, *Hist. of Greece*, pt. 2, ch. 12.—During the war with Persia, Delos was made the common treasury of the Greeks; but Athens subsequently took the custody and management of the treasury to herself and reduced Delos to a dependency. The island was long the seat of an extensive commerce, and Delian bronze was of note in the arts.

B. C. 490.—Spared by the Persians. See GREECE: B. C. 490.

B. C. 477.—The Delian Confederacy. See GREECE: B. C. 478-477; and ATHENS: B. C. 466-454, and after.

B. C. 461-454 (P).—Removal of the Confederate treasury to Athens. See ATHENS: B. C. 466-454.

B. C. 425-422.—Purifications.—"In the midst of the losses and turmoil of the [Peloponnesian] war it had been determined [at Athens] to offer a solemn testimony of homage to Apollo on Delos, [B. C. 425]—a homage doubtless connected with the complete cessation of the pestilence, which had lasted as long as the fifth year of the war. The solemnity consisted in the renewed consecration of the entire island to the divine Giver of grace; all the coffins containing human remains being removed from Delos, and Rhenea appointed to be henceforth the sole burial-place. This solemnity supplemented the act formerly performed by the orders of Pisistratus, and it was doubtless in the present instance also intended, by means of a brilliant renewal of the Delian

celebration, to strengthen the power of Athens in the island sea, to give a festive centre to the Ionic world. . . . But the main purpose was clearly one of morality and religion. It was intended to calm and edify the minds of the citizens."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 2.—Three years later (B. C. 432) the Athenians found some reason for another purification of Delos which was more radical, consisting in the expulsion of all the inhabitants from the island. The unfortunate Delians found an asylum at Adramyttium in Asia, until they were restored to their homes next year, through the influence of the Delphic oracle.—Thucydides, *History*, bk. 5, sect. 1.

B. C. 88.—Pontic Massacre.—Early in the first war of Mithridates with the Romans (B. C. 88), Delos, which had been made a free port and had become the emporium of Roman commerce in the east, was seized by a Pontic fleet, and pillaged, 20,000 Italians being massacred on the island. The treasures of Delos were sent to Athens and the island restored to the Athenian control.—W. Ihne, *Hist. of Rome*, bk. 7, ch. 17.

B. C. 69.—Ravaged by Pirates.—"Almost under the eyes of the fleet of Lucullus, the pirate Athenodorus surprised in 685 [B. C. 69] the island of Delos, destroyed its far-famed shrines and temples, and carried off the whole population into slavery."—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 2.

Slave Trade under the Romans.—"Thrace and Sarmatia were the Guinea Coast of the Romans. The entrepôt of this trade was Delos, which had been made a free port by Rome after the conquest of Macedonia. Strabo tells us that in one day 10,000 slaves were sold there in open market. Such were the vile uses to which was put the Sacred Island, once the treasury of Greece."—H. G. Liddell, *Hist. of Rome*, bk. 5, ch. 48.

DELPHI.—KRISSA (CRISSA).—KIRRHA (CIRRHA).—"In those early times when the Homeric Hymn to Apollo was composed the town of Krissa [in Phocis, near Delphi] appears to have been great and powerful, possessing all the broad plain between Parnassus, Kirrhis, and the gulf, to which latter it gave its name, —and possessing also, what was a property not less valuable, the adjoining sanctuary of Pytho itself, which the Hymn identifies with Krissa, not indicating Delphi as a separate place. The Krissæans, doubtless, derived great profits from the number of visitors who came to visit Delphi, both by land and by sea, and Kirrha was originally only the name for their seaport. Gradually, however, the port appears to have grown in importance at the expense of the town; . . . while at the same time the sanctuary of Pytho with its administrators expanded into the town of Delphi, and came to claim an independent existence of its own. . . . In addition to the above facts, already sufficient in themselves as seeds of quarrel, we are told that the Kirrhæans abused their position as masters of the avenue to the temple by sea, and levied exorbitant tolls on the visitors who landed there. . . . Besides such offence against the general Grecian public, they had also incurred the enmity of their Phocian neighbours by outrages upon women, Phocian as well as Argeian, who were returning from the temple. Thus stood the case apparently, about 595 B. C.,

when the Amphiktyonic meeting interfered . . . to punish the Kirrhæans. After a war of ten years, the first Sacred War in Greece, this object was completely accomplished, by a joint force of Thessalians under Eurylochus, Sikyonians under Kleisthenes, and Athenians under Alkmæon; the Athenian Solon being the person who originated and enforced, in the Amphiktyonic council, the proposition of interference. Kirrha . . . was destroyed, or left to subsist merely as a landing place; and the whole adjoining plain was consecrated to the Delphian god, whose domains thus touched the sea. . . . The fate of Kirrha in this war is ascertained: that of Krissa is not so clear, nor do we know whether it was destroyed, or left subsisting in a position of inferiority with regard to Delphi. From this time forward, the Delphian community appears as substantive and autonomous, exercising in their own right the management of the temple; though we shall find, on more than one occasion, that the Phocians contest this right. . . . The spoils of Kirrha were employed by the victorious allies in founding the Pythian Games. The octennial festival hitherto celebrated at Delphi in honour of the god, including no other competition except in the harp and the pæan, was expanded into comprehensive games on the model of the Olympic, with matches not only of music, but also of gymnastics and chariots, —celebrated, not at Delphi itself, but on the maritime plain near the ruined Kirrha, —and under the direct superintendence of the Amphiktyons themselves. . . . They were celebrated in the latter half of summer, or first half of every third Olympic year. . . . Nothing was conferred but wreaths of laurel."—G. Grote, *Hist. of Greece*, pt. 2, ch. 28.—See, also, **ATHENS: B. C. 610–586; PYTHO; ORACLES OF THE GREEKS; and AMPHIKTYONIC COUNCIL.**

DEMIURGI.—COSMOS.—TAGOS OR TAGUS.—Of the less common titles applied among the ancient Greeks to their supreme magistrates, are "Cosmos, or Cosmios, and Tagos (signifying Arranger and Commander), the former of which we find in Crete, the latter in the Thessalian cities. With the former we may compare the title of Cosmopolis, which was in use among the Epizephyrian Locrians. A more frequent title is that of Demiurgi, a name which seems to imply a constitution no longer oligarchical, but which bestowed certain rights on the Demos. In the time of the Peloponnesian war magistrates of this kind existed in

Elis and in the Arcadian Mantinea. . . . The title is declared by Grammarians to have been commonly used among the Dorians. . . . A similar title is that of Demuchus, which the supreme magistrates of Thespie in Boeotia seem to have borne. . . . The Artyni at Epidaurus and Argos we have already mentioned."—G. Schömann, *Antiq. of Greece: The State*, pt. 2, ch. 5.

DIES ATRI.—The days on which the Romans thought it unlucky to undertake business of importance—for example, the day after the Calends, Nones and Ides of each month—were called *Dies Atri*.—W. Ramsay, *Manual of Roman Antiq.*, ch. 11.

DIES FASTI.—*Dies Nefasti.*—*Dies Festi.* See **FASTI, and LUDI.**

DIET.—"An assembly, council, . . . Parliament. . . . The peculiar sense of the word undoubtedly arose from a popular etymology that connected it with the Lat. 'dies,' a day, esp. a set day, a day appointed for public business; whence, by extension, a meeting for business, an assembly."—W. W. Skeat, *Etymological dict.*

The Germanic.—"The annual general councils and special councils of Charles the Great did not long survive him, and neither his descendants nor their successors revived them. They were compelled, to be sure, both by custom and by policy to advise with the chief men of the kingdom before taking any important step or doing anything that depended for success on their consent and coöperation, but they varied the number of their counsellors and the time, place, and manner of consulting them to suit their own convenience. Great formal assemblies of counsellors summoned from all parts of the realm were termed Imperial Diets (*Reichstage*); small, or local, or informal assemblies of a similar kind were known as Court Diets (*Hoftage*). Princes and other royal vassals, margraves, palgraves, Graves, barons, and even royal *Dienstmannen* were indiscriminately summoned, but the Diets were in no sense representative bodies until the Great Interregnum [see **GERMANY**: A. D. 1250-1272] when certain cities acquired such influence in public affairs that they were invited to send delegates. The first Diet in which they participated was held at Worms in February, 1255, by King William of Holland. Most of the cities of the Rhenish League were there represented, and they constituted an important factor of the assembly. The affairs of the church shared attention with temporal affairs in the Diets until the Popes succeeded in making good their claims to supremacy in spiritual matters. Thereafter they were altogether left to synods and church councils. . . . Imperial Diets and Court Diets continued to be held at irregular intervals, whenever and wherever it pleased the king to convene them, but Imperial Diets were usually held in Imperial cities. These were not such heterogenous assemblies as formerly, for few royal vassals, except princes, and no royal *Dienstmannen* whatever were now invited to attend. Graves and barons, and prelates who were not princes, continued to be summoned, but the number and influence of the Graves and barons in the Diets steadily waned. Imperial cities were for many years only occasionally asked to participate, that is to say, only when the king had especial need of their good offices, but in the latter half of the 14th century they began to be regularly summoned. Imperial Diets were so frequently held during the Hussite

War and thereafter, that it became pretty well settled what persons and what cities should take part in them, and only those persons and those cities that were entitled to take part in them were regarded as Estates of the realm. In the 15th century they developed into three chambers or colleges, viz., the College of Electors [see GERMANY: A. D. 1125-1152], the College of Princes, Graves, and Barons, usually called the Council of Princes of the Empire (Reichsfürstentath), and the College of Imperial Cities. The Archbishop of Mentz presided in the College of Electors, and the Archbishop of Salzburg and the Duke of Austria presided alternately in the Council of Princes of the Empire. The office of presiding in the College of Imperial Cities devolved upon the Imperial city in which the Diet sat. The king and members of both the upper Colleges sometimes sent deputies to represent them, instead of attending in person. In 1474 the cities adopted a method of voting which resulted in a division of their College into two Benches, called the Rhenish Bench and the Swabian Bench, because the Rhenish cities were conspicuous members of the one, and the Swabian cities conspicuous members of the other. In the Council of Princes, at least, no regard was had to the number of votes cast, but only to the power and influence of the voters, whence a measure might pass the Diet by less than a majority of the votes present. Having passed, it was proclaimed as the law of the realm, upon receiving the king's assent, but was only effective law in so far as the members of the Diet, present or absent, assented to it. . . . Not a single Imperial Diet was summoned between 1613 and 1640. The king held a few Court Diets during that long interval, consisting either of the Electors alone, or of the Electors and such other Princes of the Empire as he chose to summon. The conditions of membership, and the manner of voting in the College of Electors and the College of Imperial Cities remained unchanged. . . . The cities long strove in vain to have their votes recognized as of equal weight with the others, but the two upper Colleges insisted on regarding them as summoned for consultation only, until the Peace of Westphalia settled the matter by declaring that 'a decisive vote (votum decisivum) shall belong to the Free Imperial Cities not less than to the rest of the Estates of the Empire.' Generally, but not always, the sense of each College was expressed by the majority of votes cast. The Peace of Westphalia provided that 'in religious matters and all other business, when the Estates cannot be considered one body (corpus), as also when the Catholic Estates and those of the Augsburg Confession go into two parts (in duas partes euntibus), a mere amicable agreement shall settle the differences without regard to majority of votes.' When the 'going into parts,' (itio in partes) took place each College deliberated in two bodies, the Corpus Catholicorum and the Corpus Evangelicorum. The king no longer attended the Imperial Diets in person, but sent commissioners instead, and it was now the common practice of members of both the upper Colleges to send deputies to represent them."—S. E. Turner, *Sketch of the Germanic Constitution*, ch. 4, 5, and 6.—"The establishment of a permanent diet, attended, not by the electors in person, but by their representatives, is one of the most

striking peculiarities of Leopold's reign" (Leopold I., 1657-1705). This came about rather accidentally than with intention, as a consequence of the unusual prolongation of the session of a general diet which Rudolph convoked at Ratisbon, soon after his accession to the throne. "So many new and important objects . . . occurred in the course of the deliberations that the diet was unusually prolonged, and at last rendered perpetual, as it exists at present, and distinguishes the Germanic constitution as the only one of its kind—not only for a certain length of time, as was formerly, and as diets are generally held in other countries, where there are national states; but the diet of the Germanic empire was established by this event for ever. The diet acquired by this circumstance an entirely different form. So long as it was only of short duration, it was always expected that the emperor, as well as the electors, princes, counts and prelates, if not all, yet the greatest part of them, should attend in person. . . . It is true, it had long been customary at the diets of Germany, for the states to deliver their votes occasionally by means of plenipotentiaries; but it was then considered only as an exception, whereas it was now established as a general rule, that all the states should send their plenipotentiaries, and never appear themselves. . . . The whole diet, therefore, imperceptibly acquired the form of a congress, consisting solely of ministers, similar in a great degree to a congress where several powers send their envoys to treat of peace. In other respects, it may be compared to a congress held in the name of several states in perpetual alliance with each other, as in Switzerland, the United Provinces, and as somewhat of a similar nature exists at present in North America; but with this difference,—that in Germany the assembly is held under the authority of one common supreme head, and that the members do not appear merely as deputies, or representatives invested with full power by their principals, which is only the case with the imperial cities; but so that every member of the two superior colleges of the empire is himself an actual sovereign of a state, who permits his minister to deliver his vote in his name and only according to his prescription."—S. A. Dunham, *Hist. of the Germanic Empire*, bk. 3, ch. 3 (v. 3)—(quoting Putter's *Historical Development of the Germanic Const.*)—Of the later Diet, of the Germanic Confederation, something may be learned under GERMANY: A. D. 1814-1820, and 1848 (MARCH-SEPTEMBER).

DIFFIDATION, The Right of. See LAND-FRIEND.

DIGITI. See FOOT, THE ROMAN.

DIJON, Battle at. See BURGUNDIANS: A. D. 500.

DIJON, Origin of.—Dijon, the old capital of the Dukes of Burgundy, was originally a strong camp-city—an "urbs quadrata"—of the Romans, known as the Castrum Divionense. Its walls were 30 feet high, 15 feet thick, and strengthened with 33 towers.—T. Hodgkin, *Italy and Her Invaders*, bk. 4, ch. 9.

DIMETIA. See BRITAIN: 6th CENTURY.

DINAN, Battle of (1597). See FRANCE: A. D. 1593-1598.

DINANT, Destruction of.—Some young men of Dinant having caricatured Duke Charles the Bold, of Burgundy, in the course of his war with Liège (to the bishopric of which Dinant belonged), he took the town, in 1466, sacked it, tied 800 of the citizens in pairs and drowned them, hanged many more, and made slaves of the surviving men. Then he burned the city and removed the materials of which it had been built.—J. F. Kirk, *Charles the Bold*, bk. 1, ch. 8-9.

Also in: E. de Monstrelet (Johnes), *Chronicles*, bk. 3, ch. 138-139.—Philip de Commines, *Memoirs*, bk. 2, ch. 1.

DINWIDDIE COURT HOUSE, Action at. See UNITED STATES OF AM.: A. D. 1865 (MARCH—APRIL: VIRGINIA).

DIOBOLY, The. Pericles "was the proposer of the law [at Athens] which instituted the 'Dioboly,' or free gift of two obols to each poor citizen, to enable him to pay the entrance-money at the theatre during the Dionysia."—C. W. C. Oman, *Hist. of Greece*, p. 271.—See ATHENS: B. C. 435-431.

DIOCESSES OF THE ROMAN EMPIRE.—"The civil government of the empire was distributed [under Constantine and his successors] into thirteen great dioceses, each of which equalled the just measure of a powerful kingdom. The first of these dioceses was subject to the jurisdiction of the Count of the East. The place of Augustal Prefect of Egypt was no longer filled by a Roman knight, but the name was retained. . . . The eleven remaining dioceses—of Asiana, Pontica, and Thrace: of Macedonia, Dacia and Pannonia, or Western Illyricum; of Italy and Africa; of Gaul, Spain, and Britain—were governed by twelve vicars or vice-prefects."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 17.—See PRÆTORIAN PRÆFECTS.

DIOCLETIAN, Roman Emperor. See ROME: A. D. 284-305. . . . Abdication.—"The ceremony of his abdication was performed in a spacious plain about three miles from Nicomedia [May 1, A. D. 305]. The Emperor ascended a lofty throne, and, in a speech full of reason and dignity, declared his intention, both to the people and to the soldiers who were assembled on this extraordinary occasion. As soon as he had divested himself of the purple, he withdrew from the gazing multitude, and, traversing the city in a covered chariot, proceeded without delay to the favourite retirement [Salona] which he had chosen in his native country of Dalmatia."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 13.—See, also, SALONA.

DIOKLES, Laws of.—A code of laws framed at Syracuse, immediately after the Athenian siege, by a commission of ten citizens the chief of whom was one Diokles. These laws were extinguished in a few years by the Dyonisian tyranny, but revived after a lapse of sixty years. The code is "also said to have been copied in various other Sicilian cities, and to have remained in force until the absorption of all Sicily under the dominion of the Romans."—G. Grote, *Hist. of Greece*, pt. 2, ch. 81.

DIONYSIA AT ATHENS.—"The four principal Attik Dionysiak festivals were (1) the Dionysia Mikra, the Lesser or Rural Dionysia; (2) the Dionysia Lenaia; (3) the Anthesteria; and (4) the Dionysia Megala, the Greater or City Dionysia. The Rural Dionysia, celebrated yearly

in the month Posideon (Dec. — Jan.) throughout the various townships of Attike, was presided over by the demarch or mayor. The celebration occasioned a kind of rustic carnival, distinguished like almost all Bakchik festivals, by gross intemperance and licentiousness, and during which slaves enjoyed a temporary freedom, with licence to insult their superiors and behave in a boisterous and disorderly manner. It is brought vividly before us in the 'Acharnes' of Aristophanes. . . . The Anthesteria, or Feast of Flowers, celebrated yearly in the month Anthesterion (Feb.—March), . . . lasted for three days, the first of which was called Pithoigia, or Tap-barrel-day, on which they opened the casks and tried the wine of the previous year. . . . The Dionysia Megala, the Greater or City Dionysia, celebrated yearly in the month Elaphebolion (March—April) was presided over by the Archon Eponymos, so-called because the year was registered in his name, and who was first of the nine. The order of the solemnities was as follows: I. The great public procession. . . . II. The chorus of Youths. III. The Komos, or band of Dionysiak revellers, whose ritual is best illustrated in Milton's exquisite poem. IV. The representation of Comedy and Tragedy; for at Athenai the stage was religion and the theatre a temple. At the time of this great festival the capital was filled with rustics from the country townships, and strangers from all parts of Hellas and the outer world."—R. Brown, *The Great Dionysiak Myth*, ch. 6.

DISCIPLES OF CHRIST.—"This body, often called also Christians, was one of the results of the great revival movement which began in Tennessee and Kentucky in the early part of the present century. Rev. Barton W. Stone, a Presbyterian minister who was prominent in the revival movement, withdrew from the Presbyterian Church, and in 1804 organized a church with no other creed than the Bible and with no name but that of Christian. One of his objects was to find a basis for the union of all Christian believers. A little later Thomas and Alexander Campbell, father and son, who came from Ireland, where the former had been a Presbyterian minister, organized union societies in Pennsylvania. Changing their views as to baptism, they joined the Redstone Association of Baptists. Shortly after, when Alexander Campbell was charged with not being in harmony with the creed, he followed the Burch Run Church, of which he was pastor, into the Mahoning Baptist Association, which, leavened with his teachings, soon ceased to be known as a Baptist association. In 1827, after some correspondence with Rev. B. W. Stone and his followers of the Christian Connection, there was a union with a large number of congregations in Ohio, Kentucky, and Tennessee, and the organization variously known as 'Disciples of Christ' and 'Christians' [also, popularly designated Campbellites] is the result."—H. K. Carroll, *Religious Forces of the U. S.*, ch. 18.

DONATISTS, The.—“The Donatist controversy was not one of doctrine, but of ecclesiastical discipline; the contested election for the archbishopric of Carthage. Two competitors, Cecilius and Donatus, had been concurrently elected while the church was yet in a depressed state, and Africa subject to the tyrant Maxentius [A. D. 306-312]. Scarcely had Constantine subdued that province, when the two rivals referred their dispute to him. Constantine, who still publicly professed paganism, but had shown himself very favourable to the Christians, instituted a careful examination of their respective claims, which lasted from the year 312 to 315, and finally decided in favour of Cecilius. Four hundred African bishops protested against this decision; from that time they were designated by the name of Donatists. . . . In compliance with an order of the emperor, solicited by Cecilius, the property of the Donatists was seized and transferred to the antagonist body of the clergy. They revenged themselves by pronouncing sentence of excommunication against all the rest of the Christian world. . . . Persecution on one side and fanaticism on the other were perpetuated through three centuries, up to the period of the extinction of Christianity in Africa. The wandering preachers of the Donatist faction had no other means of living than the alms of their flocks. . . . As might be expected, they outdid each other in extravagance, and soon gave in to the most frantic ravings: thousands of peasants, drunk with the effect of these exhortations, forsook their ploughs and fled to the deserts of Getulia. Their bishops, assuming the title of captains of the saints, put themselves at their head, and they rushed onward, carrying death and desolation into the adjacent provinces; they were distinguished by the name of Circumcellions: Africa was devastated by their ravages.”—J. DORIANS AND IONIANS, The.—“Out of the great Pelasgian population [see **PELASGIANS**], which covered Anterior Asia Minor and the whole European peninsular land, a younger people had issued forth separately, which we find from the first divided into two races. These main races we may call, according to the two dialects of the Greek language, the Dorian and the Ionian, although these names are not generally used until a later period to designate the division of the Hellenic nation. No division of so thorough a bearing could have taken place unless accompanied by an early local separation. We assume that the two races parted company while yet in Asia Minor. One of them settles in the mountain-cantons of Northern Hellas, the other along the Asiatic coast. In the latter the historic movement begins. With the aid of the art of navigation, learnt from the Phœnicians the Asiatic Greeks at an early period spread over the sea; domesticating themselves in lower Egypt, in countries colonized by the Phœnicians, in the whole Archipelago, from Crete to Thrace; and from their original as well as from their subsequent seats send out numerous settlements to the coast of European Greece, first from the East side, next, after conquering their timidity, also taking in the country, beyond Cape Malea from the West. At first they land as pirates and enemies, then proceed to permanent settlements in gulfs and straits of the sea, and by the mouths of rivers, where they unite with the Pelasgian population. The different periods of this colonization may be judged of by the forms of divine worship, and by the names under which the maritime tribes were called by the natives. Their rudest appearance is as Carians; as Leleges their influence is more beneficent and permanent.”—Dr. E. Curtius, *Hist. of Greece*, bk. 1, ch. 2.—In the view of Dr. Curtius, the later migration of Ionian tribes from Southern Greece to the coasts of Asia Minor,—which is an undoubted historic fact,—was really a return “into the home of their ancestors”—“the ancient home of the great Ionic race.” Whether that be the true view or not, the movement in question was

connected, apparently, with important movements among the Dorian Greeks in Greece itself. These latter, according to all accounts, and the agreement of all historians, were long settled in Thessaly, at the foot of Olympus (see **GREECE: THE MIGRATIONS**). It was there that their moral and political development began; there that they learned to look at Olympus as the home of the gods, which all Greeks afterwards learned to do from them. “The service rendered by the Dorian tribe,” says Dr. Curtius, “lay in having carried the germs of national culture out of Thessaly, where the invasion of ruder peoples disturbed and hindered their farther growth, into the land towards the south, where these germs received an unexpectedly new and grand development. . . . A race claiming descent from Heracles united itself in this Thessalian coast-district with the Dorians and established a royal dominion among them. Ever afterwards Heracleidæ and Dorians remained together, but without ever forgetting the original distinction between them. In their seats by Olympus the foundations were laid of the peculiarity of the Dorians in political order and social customs; at the foot of Olympus was their real home.”—*The same*, bk. 1, ch. 4.—From the neighborhood of Olympus the Dorians moved southwards and found another home in “the fertile mountain-recess between Parnassus and Ceta, . . . the most ancient Doris known to us by name.” Their final movement was into Peloponnesus, which was “the most important and the most fertile in consequences of all the migrations of Grecian races, and which continued, even to the latest periods to exert its influence upon the Greek character.” Thenceforward the Dorians were the dominant race in Peloponnesus, and to their chief state, Lacedæmonia, or Sparta, was generally conceded the headship of the Hellenic family. This Doric occupation of Peloponnesus, the period of which is supposed to have been about 1100 B. C., no doubt caused the Ionic migration from that part of Greece and colonization of Asia Minor.—C. O. Müller, *Hist. and Antiquities of the Doric race*, bk. 1, ch. 3.—The subsequent division of the Hellenic world between Ionians and Dorians is thus defined by Schömann: “To the Ionians belong the inhabitants of Attica, the most important part of the population of Eubœa, and the islands of the Ægean included under the common name of Cyclades, as well as the colonists both on the Lydian and Carian coasts of Asia Minor and in the two larger islands of Chios and Samos which lie opposite. To the Dorians within the Peloponnesus belong the Spartans, as well as the dominant populations of Argos, Sicyon, Philus, Corinth, Troezen and Epidaurus, together with the island of Ægina; outside the Peloponnesus, but nearest to it, were the Megarid, and the small Dorian Tetrapolis [also called Pentapolis and Tripolis] near Mount Parnassus; at a greater distance were the majority of the scattered islands and a large portion of the Carian coasts of Asia Minor and the neighbouring islands, of which Cos and Rhodes were the most important. Finally, the ruling portion of the Cretan population was of Dorian descent.”—G. F. Schömann, *Antiquities of Greece: The State*, pt. 1, ch. 1.—See, also, **GREECE: THE MIGRATIONS**; **ASIA MINOR: THE GREEK COLONIES**; **HERACLEIDÆ**; **SPARTA**; and **ÆOLIANS**.

DORIS AND DRYOPIS.—"The little territory [in ancient Greece] called Doris and Dryopis occupied the southern declivity of Mount Ceta, dividing Phokis on the north and northwest from the Ætolians, Ænians and Malians. That which was called Doris in the historical times, and which reached in the times of Herodotus nearly as far eastward as the Maliac gulf, is said to have formed a part of what had been once called Dryopis; a territory which had comprised the summit of Ceta as far as the Sperchius, northward, and which had been inhabited by an old Hellenic tribe called Dryopes. The Dorians acquired their settlement in Dryopis by gift from Hēraklēs, who, along with the Malians (so ran the legend), had expelled the Dryopes and compelled them to find for themselves new seats at Hermione, and Asiné, in the Argolic peninsula of Peloponnesus,—at Styra and Karystus in Eubœa, —and in the island of Kythnos; it is only in these five last-mentioned places that history recognizes them. The territory of Doris was distributed into four little townships,—Pindus, or Akyphas, Boon, Kytinion and Erineon. . . . In itself this tetrapolis is so insignificant that we shall rarely find occasion to mention it; but it acquired a factitious consequence by being regarded as the metropolis of the great Dorian cities in Peloponnesus, and receiving on that ground special protection from Sparta."—G. Grote, *Hist. of Greece*, pt. 2, ch. 3.

DORT, OR DORDRECHT, The Synod of.—"In the low-countries the supreme government, the states-general, interfered [in the Calvinistic controversy], and in the year 1618 convoked the first and only synod bearing something of the character of a general council that has been convened by protestants. It assembled at Dort, and continued its sittings from November till May following. Its business was to decide the questions at issue between the Calvinists and Arminians; the latter party were also termed remonstrants. James [I.] was requested to send over representatives for the English Church, and chose four divines:—Carlton bishop of Llandaff, Hall dean of Worcester, afterwards bishop successively of Exeter and Norwich, Davenant afterwards bishop of Salisbury, and Dr. S. Ward of Cambridge. They were men of learning and moderation. . . . The history of this famous synod is told in various ways. Its decisions were in favour of the doctrines termed Calvinistic, and the remonstrants were expelled from Holland. . . . The majority were even charged by the other party with having bound themselves by an oath before they entered upon business, to condemn the remonstrants."—J. B. DOUBLOON.—DOBLOON. See SPANISH COINS.

DOUGHFACES.—The "Missouri Compromise," of 1820, in the United States, "was a Northern measure, carried by Northern votes. With some the threats of disunion were a sufficient influence; some, whom in the debate Randolph [John Randolph, of Virginia] called doughfaces, did not need even that. . . . There has been always a singular servility in the character of a portion of the American people. In that class the slaveholder has always found his Northern servitor. Randolph first gave it a name to live by in the term doughface."—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S.*, v. 4, pp. 270 and 294.

DROMONES.—A name given to the light galleys of the Byzantine empire.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 53.

DRUIDS.—The priesthood of a religion which existed among the Celts of Gaul and Britain before they were Christianized. "Greek and Roman writers give us very little information on this subject and the early Welsh records and poetry none at all. Modern Welsh writers have, however, made up for this want in their genuine literature by inventing an elaborate Druidical system of religion and philosophy which, they pretend, survived the introduction of Christianity and was secretly upheld by the Welsh bards in the Middle Ages. This Neo-Druidic imposture has found numerous adherents."—W. K. Sullivan, *Article, "Celtic Literature," Encyc. Brit.*—"Pliny, alluding to the Druids' predilection for groves of oak, adds the words: 'ut inde appellati quoque interpretatione Græca possint Druidæ videri.' . . . Had he possessed knowledge enough of the Gaulish language, he would have seen that it supplied an explanation which rendered it needless to have recourse to Greek, namely in the native word 'dru,' which we have in 'Drunemeton,' or the sacred Oak-grove, given by Strabo as the name of the place of assembly of the Galatians. In fact, one has, if I am not mistaken, been skeptic with regard to this etymology, not so much on phonological grounds as from failing exactly to see how the oak could have given its name to such a famous organization as the druidic one must be admitted to have been. But the parallels just indicated, as showing the importance of the sacred tree in the worship of Zeus and the gods representing him among nations other than the Greek one, help to throw some light on this point. According to the etymology here alluded to, the Druids would be the priests of the god associated or identified with the oak; that is, as we are told, the god who seemed to those who were familiar with the pagan theology of the Greeks, to stand in the same position in Gaulish theology that Zeus did in the former. This harmonizes thoroughly with all that is known about the Druids."—J. Rhys, *Hibbert Lects.*, 1886, on *Celtic Heathendom*, lect. 2, pt. 2.—"Our traditions of the Scottish and Irish Druids are evidently derived from a time when Christianity had long been established. These insular Druids are represented as being little better than conjurors, and their dignity is as much diminished as the power of the king is exaggerated. . . . He is a Pharaoh or Belshazzar with a troop of wizards at his command; but his Druids are sorcerers and rain-doctors. . . . The Druids of Strabo's description walked in scarlet and gold brocade and wore golden collars and bracelets; but their doctrines may have been much the same as those of the soothsayers by the Severn, the Irish medicine-men or those rustic wizards by

the Loire. . . . After the conversion of Ireland was accomplished the Druids disappear from history. Their mystical powers were transferred without much alteration to the abbots and bishops who ruled the 'families of the saints.'"—C. Elton, *Origins of English Hist.*, ch. 10.

Also in: Julius Caesar, *Gallie War*, bk. 6, ch. 13-18.—Strabo, *Geog.*, bk. 4, ch. 4, sect. 4-6.—For an account of the final destruction of the Druids, see BRITAIN: A. D. 61.

A. D. 1750.—The importance of the city.—"In the middle of the 18th century it was in dimensions and population the second city in the empire, containing, according to the most trustworthy accounts, between 100,000 and 120,000 inhabitants. Like most things in Ireland, it presented vivid contrasts, and strangers were equally struck with the crowds of beggars, the inferiority of the inns, the squalid wretchedness of the streets of the old town, and with the noble proportions of the new quarter, and the brilliant and hospitable society that inhabited it. The Liffey was spanned by four bridges, and another on a grander scale was undertaken in 1753. St. Stephen's Green was considered the largest square in Europe. The quays of Dublin were widely celebrated."—W. E. H. Lecky, *Hist. of Eng.*, 18th Century, ch. 7 (v. 2).

DUBRIS, OR DUBRÆ.—The Roman port on the east coast of Britain which is now known as Dover. In Roman times, as now, it was the principal landing-place on the British side of the channel.—T. Wright, *Celt. Roman and Saxon*, ch. 5.

EALDORMAN.—"The chieftains of the first settlers in our own island bore no higher title than Ealdorman or Heretoga. . . . The name of Ealdorman is one of a large class; among a primitive people age implies command and command implies age; hence in a somewhat later stage of language the elders are simply the rulers and the eldest are the highest in rank, without any thought of the number of years which they may really have lived. It is not perfectly clear in what the authority or dignity of the King exceeded that of the Ealdorman. . . . Even the smallest Kingdom was probably formed by the union of the districts of several Ealdormen."—E. A. Freeman, *Norman Conquest, ch. 3, sect. 1*.—"The organisation of the shire was of much the same character as that of the hundred [each shire containing, however, a number of hundreds], but it was ruled by an ealdorman as well as by a gerefa, and in some other respects bore evidence of its previous existence as an independent unity. Its gemot was not only the scir-gemot but the folc-gemot also, the assembly of the people; its ealdorman commanded not merely the military force of the hundreds, but the lords of the franchises and the church vassals with their men. Its gerefa or sheriff collected the fiscal as well as the local imposts. Its ealdorman was one of the king's witan. The ealdorman, the princeps of Tacitus, and princeps, or satrapa, or subregulus of Bede, the dux of the Latin chroniclers and the comes of the Normans, was originally elected in the general assembly of the nation. . . . The hereditary principle appears however in the early days of the kingdom as well as in those of Edward the Confessor; in the case of an under-kingdom being annexed to a greater the old royal dynasty seems to have continued to hand down its delegated authority from father to son. The under-kings of Hwicca thus continued to act as ealdormen under Mercia for a century; and the ealdormanship of the Gyrwas or fen-countrymen seems likewise to have been hereditary. The

title of ealdorman is thus much older than the existing division of shires, nor was it ever the rule for every shire to have an ealdorman to itself as it had its sheriff. . . . But each shire was under an ealdorman, who sat with the sheriff and bishop in the folkmoet, received a third part of the profits of the jurisdiction, and commanded the military force of the whole division. From the latter character he derived the name of heretoga, leader of the host ('here'), or dux, which is occasionally given him in charters."—W. Stubbs, *Const. Hist. of Eng., ch. 5, sects. 48-49*.

EARL.—"The title of earl had begun to supplant that of ealdorman in the reign of Ethelred; and the Danish jarl, from whom its use in this sense was borrowed, seems to have been more certainly connected by the tie of comitatus with his king than the Anglo-Saxon ealdorman need be supposed to have been."—W. Stubbs, *Const. Hist. of Eng., ch. 6, sect. 66*.—See, also, **EORL and EALDORMAN**.

A. D. 365.—In the Roman world.—"In the second year of the reign of Valentinian and Valens [A. D. 365], on the morning of the 21st day of July, the greater part of the Roman world was shaken by a violent and destructive earthquake. The impression was communicated to the waters; the shores of the Mediterranean were left dry by the sudden retreat of the sea. . . . But the tide soon returned with the weight

of an immense and irresistible deluge, which was severely felt on the coasts of Sicily, of Dalmatia, of Greece and of Egypt. . . . The city of Alexandria annually commemorated the fatal day on which 50,000 persons had lost their lives in the inundation."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 26.

EASTERN EMPIRE, The. See **ROME**: 717-800; and **BYZANTINE EMPIRE**.

EASTERN QUESTION, The.—The first occasion on which the problems of the Ottoman empire received the name of the Eastern Question seems to have been that connected with the revolt of Mehemet Ali in 1831 (see **TURKS**: A. D. 1831-1840). M. Guizot, in his "Memoirs," when referring to that complication, employs the term, and remarks: "I say the Eastern Question, for this was in fact the name given by all the world to the quarrel between the Sultan Mahmoud, and his subject the Pacha of Egypt, Mehemet Ali. Why was this sounding title applied to a local contest? Egypt is not the whole Ottoman empire. The Ottoman empire is not the

entire East. The rebellion, even the dismemberment of a province, cannot comprise the fate of a sovereignty. The great states of Western Europe have alternately lost or acquired, either by internal dissension or war, considerable territories; yet under the aspect of these circumstances no one has spoken of the Western question. Why then has a term never used in the territorial crises of Christian Europe, been considered and admitted to be perfectly natural and legitimate when the Ottoman empire is in argument? It is that there is at present in the Ottoman empire no local or partial question. If a shock is felt in a corner of the edifice, if a single stone is detached, the entire building appears to be, and is in fact, ready to fall. . . . The Egyptian question was in 1839 the question of the Ottoman empire itself. And the question of the Ottoman empire is in reality the Eastern question, not only of the European but of the Asiatic East; for Asia is now the theatre of the leading ambitions and rivalries of the great powers of Europe; and the Ottoman empire is the highway, the gate, and the key of Asia."—F. P. Guizot, *Memoirs to Illustrate the History of My Own Time*, v. 4, p. 322.—The several occasions since 1840 on which the Eastern Question has troubled Europe may be found narrated under the following captions: **RUSSIA**: A. D. 1853-1854, to 1854-1856; **TURKS**: A. D. 1861-1877, 1877-1878, and 1878; also **BALKAN AND DANUBIAN STATES**.—Among English writers, the term "the Eastern Question" has acquired a larger meaning, which takes in questions connected with the advance of Russia upon the Afghan and Persian frontiers.—Duke of Argyll, *The Eastern Question*.—See **AFGHANISTAN**: A. D. 1869-1881.

EATON, Dorman B., and Civil-Service Reform. See **CIVIL-SERVICE REFORM IN THE UNITED STATES**.

EBBSDOFF, OR LUNEBURG HEATH, Battle of.—A great and disastrous battle of the Germans with the Danes, or Northmen, fought Feb. 2, 880. The Germans were terribly beaten, and nearly all who survived the fight were swept away into captivity and slavery. The slain received "martyrs' honours; and their commemoration was celebrated in the Sachsen-land churches till comparatively recent times. An unexampled sorrow was created throughout Saxony by this calamity, which, for a time, exhausted the country;—Scandinavia and Jutland and the Baltic isles resounded with exultation."—Sir F. Palgrave, *Hist. of Normandy and England*, bk. 1, ch. 4.

EBBSFLEET.—The supposed first landing-place in Britain of the Jutes, under Hengest, A. D. 449 or 450, when English history, as English, begins. It was also the landing-place, A. D. 597, of Augustine and his fellow missionaries when they entered the island to undertake the conversion of its new inhabitants to Christianity. See **ENGLAND**: 449-473, and 597-685.

EBENEZER AND AMANA COMMUNITIES. See **SOCIAL MOVEMENTS**: 1843-1874.

EBERSBURG, Battle of. See **GERMANY**: A. D. 1809 (**JANUARY—JUNE**).

EBIONISM.—The heresy (so branded) of a sect of Jewish Christians, which spread somewhat extensively in the second, third, and fourth centuries. "The characteristic marks of Ebionism in all its forms are: degradation of Christianity to the level of Judaism; the principle of

the universal and perpetual validity of the Mosaic law; and enmity to the apostle Paul." The name of the Ebionites came from a Hebrew word signifying "poor."—P. Schaff, *Hist. of the Christian Church, second period, ch. 4, sect. 68.*

EBLANI, The. See IRELAND, TRIBES OF EARLY CELTIC INHABITANTS.

EBORACUM, OR EBURACUM.—The military capital of Roman Britain, and afterwards of the Anglian kingdoms of Deira and Northumbria. In Old English its name became Eorforwick, whence, by further corruption, resulted the modern English name York. The city was one of considerable splendor in Roman times, containing the imperial palace with many temples and other imposing buildings. See ENGLAND: A. D. 457–633.

EBURONES, Destruction of the.—The Eburones were a strong Germanic tribe, who occupied in Cæsar's time the country between Liège and Cologne, and whose ancestors were said to have formed part of the great migrant horde of the Cimbri and Teutones. Under a young chief, Ambiorix, they had taken the lead in the formidable revolt which occurred among the Belgic tribes, B. C. 54–53. Cæsar, when he had suppressed the revolt, determined to bring destruction on the Eburones, and he executed his purpose in a singular manner. He circulated a proclamation through all the neighboring parts of Gaul and Germany, declaring the Eburones to be traitors to Rome and outlaws, and offering them and their goods as common prey to any who would fall on them. This drew the surrounding barbarians like vultures to a feast, and the wretched Eburones were soon hunted out of existence. Their name disappeared from the annals of Gaul.—C. Merivale, *Hist. of the Romans, ch. 10.*

ECBATANA.—"The Southern Ecbatana or Agbatana,—which the Medes and Persians themselves knew as Hagmatân,—was situated, as we learn from Polybius and Diodorus, on a plain at the foot of Mount Orontes, a little to the east of the Zagros range. The notices of these authors . . . and others, render it as nearly certain as possible that the site was that of the modern town of Hamadan. . . . The Median capital has never yet attracted a scientific expedition. . . . The chief city of northern Media, which bore in later times the names of Gaza, Gazaca, or Canzaca, is thought to have been also called Ecbatana, and to have been occasionally mistaken by the Greeks for the southern or real capital."—G. Rawlinson, *Five Great Monarchies: Media, ch. 1.*

ECORCHEURS, Les.—In the later period of the Hundred Years War, after the death of the Maid of Orleans, when the English were being driven from France and the authority of the king was not yet established, lawless violence prevailed widely. "Adventurers spread themselves over the provinces under a name, 'the Skinners,' Les Ecorcheurs, which sufficiently betokens the savage nature of their outrages, if we trace it to even its mildest derivation, stripping shirts, not skins."—E. Smedley, *Hist. of France, pt. 1, ch. 14.*

The aboriginal kingdom of Quito and its conquest by the Peruvians and the Spaniards.

—"Of the old Quito nation which inhabited the highlands to the north and south of the present capital, nothing is known to tradition but the name of its last king, Quito, after whom his subjects were probably called. His domains were invaded and conquered by the nation of the Caras, or Carans, who had come by sea in balsas (rafts) from parts unknown. These Caras, or Carans, established the dynasty of the Scyris at Quito, and extended their conquests to the north and south, until checked by the warlike nation of the Puruhas, who inhabited the present district of Riobamba. . . . In the reign of Hualcopo Duchicela, the 13th Scyri, the Peruvian Incas commenced to extend their conquests to the north. . . . About the middle of the 15th century the Inca Tupac Yupanqui, father of Huaynacapac, invaded the dominions of the Scyris, and after many bloody battles and sieges, conquered the kingdom of Puruha and returned in triumph to Cuzco. Hualcopo survived his loss but a few years. He is said to have died of grief, and was succeeded by his son Cacha, the 15th and last of the Scyris. Cacha Duchicela at once set out to recover his paternal dominions. Although of feeble health, he seems to have been a man of great energy and intrepidity. He fell upon the garrison which the Inca had left at Mocha, put it to the sword, and reoccupied the kingdom of Puruha, where he was received with open arms. He even carried his banners further south, until checked by the Cañares, the inhabitants of what is now the district of Cuenca, who had voluntarily submitted to the Inca, and now detained the Scyri until Huaynacapac, the greatest of the Inca dynasty, came to their rescue." On the plain of Tiocajas, and again on the plain of Hatuntaqui, great battles were fought, in both of which the Scyri was beaten, and in the last of which he fell. "On the very field of battle the faithful Caranquis proclaimed Pacha, the daughter of the fallen king, as their Scyri. Huaynacapac now regulated his conduct by policy. He ordered the dead king to be buried with all the honors due to royalty, and made offers of marriage to young Pacha, by whom he was not refused. . . . The issue of the marriage was Atuhualpa, the last of the native rulers of Peru. . . . As prudent and highly politic as the con-

duct of Huaynacapac is generally reputed to have been, so imprudent and unpolitic was the division of the empire which he made on his death bed, bequeathing his paternal dominions to his first-born and undoubtedly legitimate son, Huascar, and to Atahualpa the kingdom of Quito. He might have foreseen the evil consequences of such a partition. His death took place about the year 1525. For five or seven years the brothers lived in peace." Then quarrels arose, leading to civil war, resulting in the defeat and death of Huascar. Atahualpa had just become master of the weakened and shaken empire of the Incas, when the invading Spaniards, under Pizarro, fell on the doomed land and made its riches their own. The conquest of the Spaniards did not include the kingdom of Quito at first, but was extended to the latter in 1533 by Sebastian de Benalcazar, whom Pizarro had put in command of the Port of San Miguel. Excited by stories of the riches of Quito, and invited by ambassadors from the Cañares, the old enemies of the Quito tribes, Benalcazar, "without orders or permission from Pizarro . . . left San Miguel, at the head of about 150 men. His second in command was the monster Juan de Ampudia." The fate of Quito was again decided on the plain of Tiocajas, where Rumiñagui, a chief who had seized the vacant throne, made a desperate but vain resistance. He gained time, however, to remove whatever treasures there may have been at Quito beyond the reach of its rapacious conquerors, and "where he hid them is a secret to the present day. . . . Traditions of the great treasures hidden in the mountains by Rumiñagui are eagerly repeated and believed at Quito. . . . Having removed the gold and killed the Virgins of the Sun, and thus placed two objects so eagerly coveted by the invaders beyond their reach, Rumiñagui set fire to the town, and evacuated it with all his troops and followers. It would be difficult to describe the rage, mortification and despair of the Spaniards, on finding smoking ruins instead of the treasures which they had expected. . . . Thousands of innocent Indians were sacrificed to their disappointed cupidity. . . . Every nook and corner of the province was searched; but only in the sepulchres some little gold was found. . . . Of the ancient buildings of Quito no stone was left upon the other, and deep excavations were made under them to search for hidden treasures. Hence there is no vestige left at Quito of its former civilization; not a ruin, not a wall, not a stone to which the traditions of the past might cling. . . . On the 28th of August, 1534, the Spanish village of Quito [San Francisco de Quito] was founded."—F. Hassaurek, *Four Years among Spanish Americans*, ch. 16.

A. D. 1822-1888.—Confederated with New Granada and Venezuela in the Colombian Republic.—Dissolution of the Confederacy.—The rule of Flores.—In 1822 "the Province of Quito was incorporated into the Colombian Republic [see COLOMBIAN STATES: A. D. 1819-1830]. It was now divided into three depart-

ments on the French system: and the southernmost of these received its name from the Equator (Ecuador) which passes through it. Shortly after Venezuela had declared itself independent of the Colombian Republic [1826—see, as above], the old province of Quito did the same, and placed its fortunes in the hands of one of Bolivar's lieutenants, named Flores. The name of Ecuador was now extended to all three departments. Flores exercised the chief authority for 15 years. The constitution limited the Presidency to four: but Flores made an arrangement with one of his lieutenants called Roca-Fuerte, by which they succeeded each other, the outgoing President becoming governor of Guayaquil. In 1843 Flores found himself strong enough to improve upon this system. He called a convention, which reformed the constitution in a reactionary sense, and named him dictator for ten years. In 1845 the liberal reaction had set in all over Colombia; and it soon became too strong for Flores. Even his own supporters began to fail him, and he agreed to quit the country on being paid an indemnity of \$20,000." During the next 15 years Ecuador was troubled by the plots and attempts of Flores to regain his lost power. In 1860, with Peruvian help, he succeeded in placing one of his party, Dr. Moreno, in the presidency, and he, himself, became governor of Guayaquil. In August, 1875, Moreno was assassinated.—E. J. Payne, *Hist. of European Colonies*, pp. 251-252.—After the assassination of President Moreno, "the clergy succeeded in seating Dr. Antonio Barrero in the presidential chair by a peaceful and overwhelming election. . . . Against his government the liberal party made a revolution, and, September 8, 1876, succeeded in driving him from power, seating in his place General Ygnacio de Veintemilla, who was one of Barrero's officers, bound to him by many ties. . . . He called an obedient convention at Ambato, in 1878, which named him President ad interim, and framed a constitution, the republicanism of which it is difficult to find. Under this he was elected President for four years, terminating 30th August, 1882, without right of re-election except after an interval of four years."—G. E. Church, *Rept. on Ecuador (Senate Ex. Doc. 69, U. S. 47th Cong., 2d Sess., v. 3)*.—President Veintemilla seized power as a Dictator, by a pronunciamiento, April 2, 1882; but civil war ensued and he was overthrown in 1883. Senor José M. P. Caamaño was then chosen Provisional President, and in February, 1884, he was elected President, by the Legislative body. He was succeeded in 1888 by Don Antonio Flores.—*Statesman's Year-book*, 1889.

ECUMENICAL, OR ECUMENICAL COUNCIL.—A general or universal council of the Christian Church. See COUNCILS OF THE CHURCH.

EDDAS, The.—"The chief depositories of the Norse mythology are the Elder or Saemund's Edda (poetry) and the Younger or Snorre's Edda (prose). In Icelandic Edda means 'great-grand-mother,' and some think this appellation refers to the ancient origin of the myths it contains. Others connect it with the Indian 'Veda' and the Norse 'vide,' (Swedish 'vela,' to know)."—R. B. Anderson, *Norse Mythology*, ch. 7.—"The word Edda is never found at all in any of the

dialects of the Old Northern tongue, nor indeed in any other tongue known to us. The first time it is met with is in the Lay of Rígh, where it is used as a title for great-grandmother, and from this poem the word is cited (with other terms from the same source) in the collection at the end of *Scaldscaparmal*. How or why Snorri's book on the Poetic Art came to be called *Edda* we have no actual testimony. . . . Snorri's work, especially the second part of it, *Scaldscaparmal*, handed down in copies and abridgments through the Middle Ages, was looked on as setting the standard and ideal of poetry. It seems to have kept up indeed the very remembrance of court-poetry, the memory of which, but for it, would otherwise have perished. But though the mediæval poets do not copy *Edda* (i. e., Snorri's rules) they constantly allude to it, and we have an unbroken series of phrases from 1340 to 1640 in which *Edda* is used as a synonym for the technical laws of the court-metre (a use, it may be observed, entirely contrary to that of our own days).—G. Vigfusson and F. Y. Powell, *Corpus Poeticum Boreale*, v. 1, introd., sect. 4.

EDESSA (Macedonia).—Edessa, or *Ægæ*, the ancient Macedonian capital, "a place of primitive antiquity, according to a Phrygian legend the site of the gardens of Midas, at the northern extremity of Mount Bermius, where the Lydias comes forth from the mountains. . . . *Ægæ* was the natural capital of the land. With its foundation the history of Macedonia had its beginning; *Ægæ* is the germ out of which the Macedonian empire grew."—E. Curtius, *Hist. of Greece*, bk. 7, ch. 1.—See, also, **MACEDONIA**.

A. D. 1097–1144.—**The Frank principality.**—On the march of the armies of the First Crusade, as they approached Syria, Baldwin, the able, selfish and self-willed brother of Godfrey of Bouillon, left the main body of the crusaders, with a band of followers, and moved off eastwards, seeking the prizes of a very worldly ambition, and leaving his devouter comrades to rescue the holy sepulchre without his aid. Good fortune rewarded his enterprise and he secured possession of the important city of Edessa. It was governed by a Greek prince, who owed allegiance to the Byzantine emperor, but who paid tribute to the Turks. "It had surrendered to Pouzan, one of the generals of Malek-shah, in the year 1087, but during the contests of the Turks and Saracens in the north of Syria it had recovered its independence. Baldwin now sullied the honour of the Franks, by exciting the people to murder their governor Theodore, and rebel against the Byzantine authority [other historians say that he was guilty of no more than a passive permission of these acts]; he then took possession of the place in his own name and founded the Frank principality of Edessa, which lasted about 47 years."—G. Finlay, *Hist. of Byzantine and Greek Empires*, A. D. 716–1453, bk. 3, ch. 2, sect. 1.—See, also, **CRUSADES**: A. D. 1096–1099, and 1147–1149; also, **JERUSALEM**: A. D. 1099–1144.

A. D. 1707.—**The city at the time of the union.**—"Edinburgh, though still but a small town, excited the admiration of travellers who were acquainted with the greatest cities of England and the Continent; nor was their admiration entirely due to the singular beauty of its situation. The quaint architecture of the older houses—which sometimes rose to the height of nine, ten or eleven stories—indeed, carried back the mind to very barbarous times; for it was ascribed to the desire of the population to live as near as possible to the protection of the castle. The filth of the streets in the early years of the 18th century was indescribable. . . . The new quarter, which now strikes every stranger by its spacious symmetry, was not begun till the latter half of the 18th century, but as early as 1723 an English traveller described the High Street as 'the stateliest street in the world.' . . . Under the influence of the Kirk the public manners of the town were marked by much decorum and even austerity, but the populace were unusually susceptible of fierce political enthusiasm, and when excited they were extremely formidable. . . . A city guard, composed chiefly of fierce Highlanders, armed and disciplined like regular soldiers, and placed under the control of the magistrates, was established in 1696; and it was not finally abolished till the present century. Edinburgh, at the beginning of the 18th century, was more than twice as large as any other Scotch town. Its population at the time of the union slightly exceeded 30,000, while that of Glasgow was not quite 15,000, that of Dundee not quite 10,000, and that of Perth about 7,000."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 5, sec. 2.

A. D. 1736.—The Porteous Riot.—"The circumstances of the Porteous Riot are familiar wherever the English tongue is spoken, because they were made the dramatic opening of one of his finest stories by that admirable genius who, like Shakespeare in his plays, has conveyed to plain men more of the spirit and action of the past in noble fiction, than they would find in most professed chronicles of fact. The early scenes of the 'Heart of Midlothian' are an accurate account of the transaction which gave so much trouble to Queen Caroline and the minister [Walpole]. A smuggler who had excited the popular imagination by his daring and his chivalry was sentenced to be hanged; after his execution the mob pressed forward to cut down his body: Porteous, the captain of the City Guard, ordered his men to fire, and several persons were shot dead: he was tried for murder, convicted, and sentenced, but at the last moment a reprieve arrived from London, to the intense indignation of a crowd athirst for vengeance: four days later, under mysterious ringleaders who could never afterwards be discovered, fierce throngs suddenly gathered together at nightfall to the beat of drum, broke into the prison, dragged out the unhappy Porteous, and sternly hanged him on a dyer's pole close by the common place of public execution."—J. Morley, *Walpole*, ch. 9.

EDOMITES, OR IDUMEANS, The.—"From a very early period the Edomites were the chief of the nations of Arabia Petraea. Amongst the branches sprung, according to Arab tradition, from the primitive Amalika, they correspond to the Arcam, and the posterity of Esau, after settling amongst them as we have seen, became the dominant family from which the chiefs were chosen. The original habitation of the Edomites was Mount Seir, whence they spread over all the country called by the Greeks Gebalene, that is the prolongation of the mountains joining on the north the land of Moab, into the Valley of Arabah, and the surrounding heights. . . . Saul successfully fought the Edomites; under David, Joab and Abishai, his generals, completely defeated them, and David placed garrisons in their towns. In their ports of Elath and Eziongeber were built the fleets sent to India by Hiram and Solomon. . . . After the schism of the ten tribes, the Edomites remained dependent on the King of Judah."—F. Lenormant, *Manual of Ancient Hist. of the East*, bk. 7, ch. 4.—See, also, NABATHEANS; JEWS: THE EARLY HEBREW HISTORY; and AMALEKITES.

EDRED, King of Wessex, A. D. 947-955.

EDRISITES, The.—After the revolt of Moorish or Mahometan Spain from the caliphate of Bagdad, the African provinces of the Moslems assumed independence, and several dynasties became seated—among them that of the Edrisites, which founded the city and kingdom of Fez, and which reigned from A. D. 829 to 907.—E. Gibbon, *Decline and Fall of the Roman Emp.*, ch. 52.—See, also, MAHOMETAN CONQUEST: A. D. 715-750.

EDUCATION.

Ancient.

Egypt.—"In the education of youth [the Egyptians] were particularly strict; and 'they knew,' says Plato, 'that children ought to be early accustomed to such gestures, looks, and motions as are decent and proper; and not to be suffered either to hear or learn any verses and songs other than those which are calculated to inspire them with virtue; and they consequently took care that every dance and ode introduced at their feasts or sacrifices should be subject to certain regulations.'"—Sir J. G. Wilkinson, *The Manners and Customs of the Ancient Egyptians*, v. 1, p. 321.—"The children were educated according to their station and their future position in life. They were kept in strict subjection by their parents, and respect to old age was particularly inculcated; the children of the priests were educated very thoroughly in writing of all kinds, hieroglyphic, hieratic, and demotic, and in the sciences of astronomy, mathematics, etc. The Jewish deliverer Moses was educated after the manner of the priests, and the 'wisdom of the Egyptians' became a proverbial expression among the outside nations, as indicating the utmost limit of human knowledge."—E. A. W. Budge, *The Dwellers on the Nile*, ch. 10.—"On the education of the Egyptians, Diodorus makes the following remarks:—"The children of the

priests are taught two different kinds of writing,—what is called the sacred, and the more general; and they pay great attention to geometry and arithmetic. For the river, changing the appearance of the country very materially every year, is the cause of many and various discussions among neighbouring proprietors about the extent of their property; and it would be difficult for any person to decide upon their claims without geometrical reasoning, founded on actual observation. Of arithmetic they have also frequent need, both in their domestic economy, and in the application of geometrical theorems, besides its utility in the cultivation of astronomical studies; for the orders and motions of the stars are observed at least as industriously by the Egyptians as by any people whatever; and they keep record of the motions of each for an incredible number of years, the study of this science having been, from the remotest times, an object of national ambition with them. . . . But the generality of the common people learn only from their parents or relations that which is required for the exercise of their peculiar professions, . . . a few only being taught anything of literature, and those principally the better class of artificers.' Hence it appears they were not confined to any particular rules in the mode of educating their children, and it depended upon a parent to choose

the degree of instruction he deemed most suitable to their mode of life and occupations, as among other civilised nations."—Sir J. G. Wilkinson, *The Manners and Customs of the Egyptians*, v. 1, pp. 175–176.—“‘There is nothing like being a scribe,’ the wise say; ‘the scribe gets all that is upon earth.’ . . . The scribe is simply a man who knows how to read and write, to draw up administrative formulas, and to calculate interest. The instruction which he has received is a necessary complement of his position if he belongs to a good family, whilst if he be poor it enables him to obtain a lucrative situation in the administration or at the house of a wealthy personage. There is, therefore, no sacrifice which the smaller folk deem too great, if it enables them to give their sons the acquirements which may raise them above the common people, or at least insure a less miserable fate. If one of them, in his infancy, displays any intelligence, they send him, when about six or eight years old, to the district school, where an old pedagogue teaches him the rudiments of reading, writing, and arithmetic. Towards ten or twelve years old, they withdraw him from the care of this first teacher and apprentice him to a scribe in some office, who undertakes to make him a ‘learned scribe.’ The child accompanies his master to his office or work-yard, and there passes entire months in copying letters, circulars, legal documents, or accounts, which he does not at first understand, but which he faithfully remembers. There are books for his use full of copies taken from well-known authors, which he studies perpetually. If he requires a brief, precise report, this is how Ennana worded one of his:—‘I reached Elephantine and accomplished my mission. I reviewed the infantry and the chariot soldiers from the temples, as well as the servants and subordinates who are in the houses of Pharaoh’s . . . officials. As my journey is for the purpose of making a report in the presence of his Majesty, . . . the course of my business is as rapid as that of the Nile; you need not, therefore, feel anxious about me.’ There is not a superfluous word. If, on the other hand, a petition in a poetical style be required, see how Pentofrit asked for a holiday. ‘My heart has left me, it is travelling and does not know how to return, it sees Memphis and hastens there. Would that I were in its place. I remain here, busy following my heart, which endeavours to draw me towards Memphis. I have no work in hand, my heart is tormented. May it please the god Ptah to lead me to Memphis, and do thou grant that I may be seen walking there. I am at leisure, my heart is watching, my heart is no longer in my bosom, languor has seized my limbs; my eye is dim, my ear hardened, my voice feeble, it is a failure of all my strength. I pray thee remedy all this.’ The pupil copies and recopies, the master inserts forgotten words, corrects the faults of spelling, and draws on the margin the signs or groups unskilfully traced. When the book is duly finished and the apprentice can write all the formulas from memory, portions of phrases are detached from them, which he must join together, so as to combine new formulas; the master then entrusts him with the composition of a few letters, gradually increasing the number and adding to the difficulties. As soon as he has fairly mastered the ordinary daily routine his education is ended,

and an unimportant post is sought for. He obtains it and then marries, becoming the head of a family, sometimes before he is twenty years old; he has no further ambition, but is content to vegetate quietly in the obscure circle where fate has thrown him.”—G. Maspéro, *Life in Ancient Egypt and Assyria*, ch. 1.—“In the schools, where the poor scribe’s child sat on the same bench beside the offspring of the rich, to be trained in discipline and wise learning, the masters knew how by timely words to goad on the lagging diligence of the ambitious scholars, by holding out to them the future reward which awaited youths skilled in knowledge and letters. Thus the slumbering spark of self-esteem was stirred to a flame in the youthful breast, and emulation was stimulated among the boys. The clever son of the poor man, too, might hope by his knowledge to climb the ladder of the higher offices, for neither his birth nor position raised any barrier, if only the youth’s mental power justified fair hopes for the future. In this sense, the restraints of caste did not exist, and neither descent nor family hampered the rising career of the clever. Many a monument consecrated to the memory of some nobleman gone to his long home, who during life had held high rank at the court of Pharaoh, is decorated with the simple but laudatory inscription, ‘His ancestors were unknown people.’ It is a satisfaction to avow that the training and instruction of the young interested the Egyptians in the highest degree. For they fully recognised in this the sole means of cultivating their national life, and of fulfilling the high civilizing mission which Providence seemed to have placed in their hands. But above all things they regarded justice, and virtue had the highest price in their eyes.”—H. Brugsch-Bey, *Hist. of Egypt under the Pharaohs*, v. 1, p. 22.

Babylonia and Assyria.—“The primitive Chaldeans were pre-eminently a literary people, and it is by their literary relics, by the scattered contents of their libraries, that we can know and judge them. As befitted the inventors of a system of writing, like the Chinese they set the highest value on education, even though examinations may have been unknown among them. Education, however, was widely diffused. . . . Assur-bani-pal’s library was open to the use and enjoyment of all his subjects, and the syllabaries, grammars, lexicons, and reading-books that it contained, show the extent to which not only their own language was studied by the Assyrians, but the dead language of ancient Accad as well. It became as fashionable to compose in this extinct tongue as it is now-a-days to display one’s proficiency in Latin prose, and ‘dog-Accadian’ was perpetrated with as little remorse as ‘dog-Latin’ at the present time. One of the Babylonian cylinders found by General di Cesnola in the temple-treasure of Kurium, which probably belongs to the period of Nebuchadnezzar’s dynasty, has a legend which endeavours to imitate the inscriptions of the early Accadian princes; but the very first word, by an unhappy error, betrays the insufficient knowledge of the old language possessed by its composer. Besides a knowledge of Accadian, the educated Assyrian was required to have also a knowledge of Aramaic, which had now become the ‘lingua franca’ of trade and diplomacy; and we find the Rabshakeh (Rab-sakki), or prime minister, who was

sent against Hezekiah by Sennacherib, acquainted with Hebrew as well. The grammatical and lexical works in the library of Nineveh are especially interesting, as being the earliest attempts of the kind of which we know, and it is curious to find the Hamiltonian method of learning languages forestalled by the scribes of Assurbani-pal. In this case, as in all others, the first enquiries into the nature of speech, and the first grammars and dictionaries, were due to the necessity of comparing two languages together; it was the Accadian which forced the Semitic Assyrian or Babylonian to study his own tongue. And already in these first efforts the main principles of Semitic grammar are laid down clearly and definitely."—A. H. Sayce, *Babylonian Literature*, pp. 71-72.—"The Babylonians were the Chinese of the ancient world. They were essentially a reading and writing people. . . . The books were for the most part written upon clay with a wooden reed or metal stylus, for clay was cheap and plentiful, and easily impressed with the wedge-shaped lines of which the characters were composed. But besides clay, papyrus and possibly also parchment were employed as writing materials. . . . The use of clay for writing purposes extended, along with Babylonian culture, to the neighbouring populations of the East. . . . It is astonishing how much matter can be compressed into the compass of a single tablet. The cuneiform system of writing allowed the use of many abbreviations—thanks to its 'ideographic' nature—and the characters were frequently of a very minute size. Indeed, so minute is the writing on many of the Assyrian (as distinguished from the Babylonian) tablets that it is clear not only that the Assyrian scribes and readers must have been decidedly short-sighted, but also that they must have made use of magnifying glasses. We need not be surprised, therefore, to learn that Sir A. H. Layard discovered a crystal lens, which had been turned on a lathe, upon the site of the great library of Nineveh. . . . To learn the cuneiform syllabary was a task of much time and labour. The student was accordingly provided with various means of assistance. The characters of the syllabary were classified and named; they were further arranged according to a certain order, which partly depended on the number of wedges or lines of which each was composed. Moreover, what we may term dictionaries were compiled. . . . To learn the signs, however, with their multitudinous phonetic values and ideographic significations, was not the whole of the labour which the Babylonian boy had to accomplish. The cuneiform system of writing, along with the culture which had produced it, had been the invention of the non-Semitic Accado-Sumerian race, from whom it had been borrowed by the Semites. In Semitic hands the syllabary underwent further modifications and additions, but it bore upon it to the last the stamp of its alien origin. On this account alone, therefore, the Babylonian student who wished to acquire a knowledge of reading and writing was obliged to learn the extinct language of the older population of the country. There was, however, another reason which even more imperatively obliged him to study the earlier tongue. A large proportion of the ancient literature, more especially that which related to religious subjects, was written in Accado-Sumerian. Even the law-cases of earlier times,

which formed precedents for the law of a later age, were in the same language. In fact, Accado-Sumerian stood in much the same relation to the Semitic Babylonians that Latin has stood to the modern inhabitants of Europe. . . . Besides learning the syllabary, therefore, the Babylonian boy had to learn the extinct language of Accad and Sumer. . . . The study of foreign tongues naturally brought with it an inquisitiveness about the languages of other people, as well as a passion for etymology. . . . But there were other things besides languages which the young student in the schools of Babylonia and Assyria was called upon to learn. Geography, history, the names and nature of plants, birds, animals, and stones, as well as the elements of law and religion, were all objects of instruction. The British Museum possesses what may be called the historical exercise of some Babylonian lad in the age of Nebuchadnezzar or Cyrus, consisting of a list of the kings belonging to one of the early dynasties, which he had been required to learn by heart. . . . A considerable proportion of the inhabitants of Babylonia could read and write. The contract tablets are written in a variety of running hands, some of which are as bad as the worst that passes through the modern post. Every legal document required the signatures of a number of witnesses, and most of these were able to write their own names. . . . In Assyria, however, education was by no means so widely spread. Apart from the upper and professional classes, including the men of business, it was confined to a special body of men—the public scribes. . . . There was none of that jealous exclusion of women in ancient Babylonia which characterizes the East of to-day, and it is probable that boys and girls pursued their studies at the same schools. The education of a child must have begun early."—A. H. Sayce, *Social Life among the Babylonians*, ch. 3.

China.—"It is not, perhaps, generally known that Peking contains an ancient university; for, though certain buildings connected with it have been frequently described, the institution itself has been but little noticed. It gives, indeed, so few signs of life that it is not surprising it should be overlooked. . . . If a local situation be deemed an essential element of identity, this old university must yield the palm of age to many in Europe, for in its present site it dates, at most, only from the Yuen, or Mongol, dynasty, in the beginning of the fourteenth century. But as an imperial institution, having a fixed organization and definite objects, it carries its history, or at least its pedigree, back to a period far anterior to the founding of the Great Wall. Among the Regulations of the House of Chow, which flourished a thousand years before the Christian era, we meet with it already in full-blown vigor, and under the identical name which it now bears, that of Kwotszekien, or 'School for the Sons of the Empire.' It was in its glory before the light of science dawned on Greece, and when Pythagoras and Plato were pumping their secrets from the priests of Heliopolis. And it still exists, but it is only an embodiment of 'life in death:' its halls are tombs, and its officers living mummies. In the 13th Book of the Chowle (see Rites de Tcheou, traduction par Édouard Biot), we find the functions of the heads of the Kwotszekien laid down with a good deal of minuteness. The presidents were to

admonish the Emperor of that which is good and just, and to instruct the Sons of the State in the 'three constant virtues' and the 'three practical duties'—in other words, to give a course of lectures on moral philosophy. The vice-presidents were to reprove the Emperor for his faults (i. e., to perform the duty of official censors) and to discipline the Sons of the State in the sciences and arts—viz., in arithmetic, writing, music, archery, horsemanship and ritual ceremonies. . . . The old curriculum is religiously adhered to, but greater latitude is given, as we shall have occasion to observe, to the term 'Sons of the State.' In the days of Chow, this meant the heir-apparent, princes of the blood, and children of the nobility. Under the Tating dynasty it signifies men of defective scholarship throughout the provinces, who purchase literary degrees, and more specifically certain indigent students of Peking, who are aided by the imperial bounty. The Kwotszekien is located in the northeastern angle of the Tartar city, with a temple of Confucius attached, which is one of the finest in the Empire. The main edifice (that of the temple) consists of a single story of imposing height, with a porcelain roof of tent-like curvature. . . . It contains no seats, as all comers are expected to stand or kneel in presence of the Great Teacher. Neither does it boast anything in the way of artistic decoration, nor exhibit any trace of that neatness and taste which we look for in a sacred place. Perhaps its vast area is designedly left to dust and emptiness, in order that nothing may intervene to disturb the mind in the contemplation of a great name which receives the homage of a nation. . . . In an adjacent block or square stands a pavilion known as the 'Imperial Lecture-room,' because it is incumbent on each occupant of the Dragon throne to go there at least once in his life-time to hear a discourse on the nature and responsibilities of his office. . . . A canal spanned by marble bridges encircles the pavilion, and arches of glittering porcelain, in excellent repair, adorn the grounds. But neither these nor the pavilion itself constitutes the chief attraction of the place. Under a long corridor which encloses the entire space may be seen as many as one hundred and eighty-two columns of massive granite, each inscribed with a portion of the canonical books. These are the 'Stone Classics'—the entire 'Thirteen,' which formed the staple of a Chinese education, being here enshrined in a material supposed to be imperishable. Among all the Universities in the world, the Kwotszekien is unique in the possession of such a library. This is not, indeed, the only stone library extant—another of equal extent being found at Singanfu, the ancient capital of the Tangs. But, that too, was the property of the Kwotszekien ten centuries ago, when Singan was the seat of empire. The 'School for the Sons of the Empire' must needs follow the migrations of the court; and that library, costly as it was, being too heavy for transportation, it was thought best to supply its place by the new edition which we have been describing. . . . In front of the temple stands a forest of columns of scarcely inferior interest. They are three hundred and twenty in number, and contain the university roll of honor, a complete list of all who since the founding of the institution have attained to the dignity of the doctorate. Allow to each an average of two hundred names, and we have an army of doctors sixty thousand strong! (By the

doctorate I mean the third or highest degree.) All these received their investiture at the Kwotszekien, and, throwing themselves at the feet of its president, enrolled themselves among the 'Sons of the Empire.' They were not, however—at least the most of them were not—in any proper sense alumni of the Kwotszekien, having pursued their studies in private, and won their honors by public competition in the halls of the Civil-service Examining Board. . . . There is an immense area occupied by lecture-rooms, examination-halls and lodging-apartments. But the visitor is liable to imagine that these, too, are consecrated to a monumental use—so rarely is a student or a professor to be seen among them. Ordinarily they are as desolate as the halls of Baalbec or Palmyra. In fact, this great school for the 'Sons of the Empire' has long ceased to be a seat of instruction, and degenerated into a mere appendage of the civil-service competitive examinations on which it hangs as a dead weight, corrupting and debasing instead of advancing the standard of national education."—W. A. P. Martin, *The Chinese, their Education, Philosophy and Letters*, pp. 85–90.

Persia.—"All the best authorities are agreed that great pains were taken by the Persians—or, at any rate, by those of the leading clans—in the education of their sons. During the first five years of his life the boy remained wholly with the women, and was scarcely, if at all, seen by his father. After that time his training commenced. He was expected to rise before dawn, and to appear at a certain spot, where he was exercised with other boys of his age in running, slinging stones, shooting with the bow, and throwing the javelin. At seven he was taught to ride, and soon afterward he was allowed to begin to hunt. The riding included, not only the ordinary management of the horse, but the power of jumping on and off his back when he was at speed, and of shooting with the bow and throwing the javelin with unerring aim, while the horse was still at full gallop. The hunting was conducted by state-officers, who aimed at forming by its means in the youths committed to their charge all the qualities needed in war. The boys were made to bear extremes of heat and cold, to perform long marches, to cross rivers without wetting their weapons, to sleep in the open air at night, to be content with a single meal in two days, and to support themselves occasionally on the wild products of the country, acorns, wild pears and the fruit of the terebinth-tree. On days when there was no hunting they passed their mornings in athletic exercises, and contests with the bow or the javelin, after which they dined simply on the plain food mentioned above as that of the men in the early times, and then employed themselves during the afternoon in occupations regarded as not iliberal—for instance, in the pursuits of agriculture, planting, digging for roots, and the like, or in the construction of arms and hunting implements, such as nets and springes. Hardy and temperate habits being secured by this training, the point of morals on which their preceptors mainly insisted was the rigid observance of truth. Of intellectual education they had but little. It seems to have been no part of the regular training of a Persian youth that he should learn to read. He was given religious notions and a certain amount of moral knowledge by means of legendary

poems, in which the deeds of gods and heroes were set before him by his teachers, who recited or sung them in his presence, and afterwards required him to repeat what he had heard, or, at any rate, to give some account of it. This education continued for fifteen years, commencing when the boy was five, and terminating when he reached the age of twenty. The effect of this training was to render the Persian an excellent soldier and a most accomplished horseman. . . . At fifteen years of age the Persian was considered to have attained to manhood, and was enrolled in the ranks of the army, continuing liable to military service from that time till he reached the age of fifty. Those of the highest rank became the body-guard of the king, and these formed the garrison of the capital. . . . Others, though liable to military service, did not adopt arms as their profession, but attached themselves to the Court and looked to civil employment, as satraps, secretaries, attendants, ushers, judges, inspectors, messengers. . . . For trade and commerce the Persians were wont to express extreme contempt."—G. Rawlinson, *The Five Great Monarchies of the Ancient Eastern World*, v. 3, pp. 238–242.—After the death of Cyrus, according to Xenophon, the Persians degenerated, in the education of their youth and otherwise. "To educate the youth at the gates of the palace is still the custom," he says; "but the attainment and practice of horsemanship are extinct, because they do not go where they can gain applause by exhibiting skill in that exercise. Whereas, too, in former times, the boys, hearing causes justly decided there, were considered by that means to learn justice, that custom is altogether altered; for they now see those gain their causes who offer the highest bribes. Formerly, also, boys were taught the virtues of the various productions of the earth, in order that they might use the serviceable, and avoid the noxious; but now they seem to be taught those particulars that they may do as much harm as possible; at least there are nowhere so many killed or injured by poison as in that country."—Xenophon, *Cyropaedia and Hellenica*; trans. by J. S. Watson and H. Dale, pp. 284–285.

Judæa.—"According to the statement of Josephus, Moses had already prescribed 'that boys should learn the most important laws, because that is the best knowledge and the cause of prosperity.' 'He commanded to instruct children in the elements of knowledge (reading and writing), to teach them to walk according to the laws, and to know the deeds of their forefathers. The latter, that they might imitate them; the former, that growing up with the laws they might not transgress them, nor have the excuse of ignorance.' Josephus repeatedly commends the zeal with which the instruction of the young was carried on. 'We take most pains of all with the instruction of children, and esteem the observance of the laws and the piety corresponding with them the most important affair of our whole life.' 'If any one should question one of us concerning the laws, he would more easily repeat all than his own name. Since we learn them from our first consciousness, we have them, as it were, engraven on our souls; and a transgression is rare, but the averting of punishment impossible.' In like manner does Philo express himself: 'Since the Jews esteem their laws as divine revelations, and are instructed in the knowledge of

them from their earliest youth, they bear the image of the law in their souls.' . . . In view of all this testimony it cannot be doubted, that in the circles of genuine Judaism boys were from their tenderest childhood made acquainted with the demands of the law. That this education in the law was, in the first place, the duty and task of parents is self-evident. But it appears, that even in the age of Christ, care was also taken for the instruction of youth by the erection of schools on the part of the community. . . . The later tradition that Joshua ben Gamla (Jesus the son of Gamaliel) enacted that teachers of boys . . . should be appointed in every province and in every town, and that children of the age of six or seven should be brought to them, is by no means incredible. The only Jesus the son of Gamaliel known to history is the high priest of that name, about 63–65 after Christ. . . . It must therefore be he who is intended in the above notice. As his measures presuppose a somewhat longer existence of boys' schools, we may without hesitation transfer them to the age of Christ, even though not as a general and established institution. The subject of instruction, as already appears from the above passages of Josephus and Philo, was as good as exclusively the law. For only its inculcation in the youthful mind, and not the means of general education, was the aim of all this zeal for the instruction of youth. And indeed the earliest instruction was in the reading and inculcation of the text of scripture. . . . Habitual practice went hand in hand with theoretical instruction. For though children were not actually bound to fulfil the law, they were yet accustomed to it from their youth up."—E. Schürer, *History of the Jewish People in the time of Jesus Christ*, v. 2, pp. 47–50.—In the fourth century B. C. the Council of Seventy Elders "instituted regularly appointed readings from the Law; on every sabbath and on every week day a portion from the Pentateuch was to be read to the assembled congregation. Twice a week, when the country people came up from the villages to market in the neighbouring towns, or to appeal at the courts of justice, some verses of the Pentateuch, however few, were read publicly. At first only the learned were allowed to read, but at last it was looked upon as so great an honour to belong to the readers, that every one attempted or desired to do so. Unfortunately the characters in which the Torah was written were hardly readable. Until that date the text of the Torah had been written in the ancient style with Phœnician or old Babylonian characters, which could only be deciphered by practised scribes. . . . From the constant reading of the Law, there arose among the Judæans an intellectual activity and vigour, which at last gave a special character to the whole nation. The Torah became their spiritual and intellectual property, and their own inner sanctuary. At this time there sprang up other important institutions, namely, schools, where the young men could stimulate their ardour and increase their knowledge of the Law and its teachings. The intellectual leaders of the people continually enjoined on the rising generation, 'Bring up a great many disciples.' And what they enjoined so strenuously they themselves must have assisted to accomplish. One of these religious schools (Beth-Waad) was probably established in Jerusalem. The teach-

ers were called scribes (sopherim) or wise men; the disciples, pupils of the wise (Talmude Chachamim). The wise men or scribes had a twofold work; on the one hand they had to explain the Torah, and on the other, to make the laws applicable to each individual and to the community at large. This supplementary interpretation was called 'explanation' (Midrash); it was not altogether arbitrary, but rested upon certain rules laid down for the proper interpretation of the law. The supreme council and the houses of learning worked together, and one completed the other. A hardly perceptible, but most important movement was the result; for the descendants of the Judeans of that age were endowed with a characteristic, which they might otherwise have claimed as inborn, the talent for research and the intellectual penetration, needed for turning and returning words and data, in order to discover some new and hidden meaning."—H. Graetz, *Hist. of the Jews*, v. 1, ch. 20.

—**Schools of the Prophets.**—"In his [Samuel's] time we first hear of what in modern phraseology are called the Schools of the Prophets. Whatever be the precise meaning of the peculiar word, which now came first into use as the designation of these companies, it is evident that their immediate mission consisted in uttering religious hymns or songs, accompanied by musical instruments—psaltery, tabret, pipe and harp, and cymbals. In them, as in the few solitary instances of their predecessors, the characteristic element was that the silent seer of visions found an articulate voice, gushing forth in a rhythmical flow, which at once riveted the attention of the hearer. These, or such as these, were the gifts which under Samuel were now organized, if one may say so, into a system."—Dean Stanley, *Lects. on the Hist. of the Jewish Church*, lect. 18.

Greece.—A description of the Athenian education of the young is given by Plato in one of his dialogues: "Education," he says, "and admonition commence in the first years of childhood, and last to the very end of life. Mother and nurse and father and tutor are quarrelling about the improvement of the child as soon as ever he is able to understand them: he cannot say or do anything without their setting forth to him that this is just and that is unjust; this is honourable, that is dishonourable; this is holy, that is unholy; do this and abstain from that. And if he obeys, well and good; if not, he is straightened by threats and blows, like a piece of warped wood. At a later stage they send him to teachers, and enjoin them to see to his manners even more than to his reading and music; and the teachers do as they are desired. And when the boy has learned his letters and is beginning to understand what is written, as before he understood only what was spoken, they put into his hands the works of great poets, which he reads at school; in these are contained many admonitions, and many tales, and praises, and encomia of ancient famous men, which he is required to learn by heart, in order that he may imitate or emulate them and desire to become like them. Then, again, the teachers of the lyre take similar care that their young disciple is temperate and gets into no mischief; and when they have taught him the use of the lyre, they introduce him to the poems of other excellent poets, who are the lyric poets; and these they set to music, and make their harmonies and rhythms quite familiar to the children, in order

that they may learn to be more gentle, and harmonious, and rhythmical, and so more fitted for speech and action; for the life of men in every part has need of harmony and rhythm. Then they send them to the master of gymnastic, in order that their bodies may better minister to the virtuous mind, and that the weakness of their bodies may not force them to play the coward in war or on any other occasion. This is what is done by those who have the means, and those who have the means are the rich; their children begin education soonest and leave off latest. When they have done with masters, the state again compels them to learn the laws, and live after the pattern which they furnish, and not after their own fancies; and just as in learning to write, the writing-master first draws lines with a style for the use of the young beginner, and gives him the tablet and makes him follow the lines, so the city draws the laws, which were the invention of good lawgivers who were of old times; these are given to the young man, in order to guide him in his conduct whether as ruler or ruled; and he who transgresses them is to be corrected, or, in other words, called to account, which is a term used not only in your country, but also in many others. Now when there is all this care about virtue private and public, why, Socrates, do you still wonder and doubt whether virtue can be taught?"—Plato, *Protagoras* (*Dialogues*; trans. by Jowett, v. 1).—The ideas of Aristotle on the subject are in the following: "There can be no doubt that children should be taught those useful things which are really necessary, but not all things; for occupations are divided into liberal and illiberal; and to young children should be imparted only such kinds of knowledge as will be useful to them without vulgarizing them. And any occupation, art, or science, which makes the body or soul or mind of the freeman less fit for the practice or exercise of virtue, is vulgar; wherefore we call those arts vulgar which tend to deform the body, and likewise all paid employments, for they absorb and degrade the mind. There are also some liberal arts quite proper for a freeman to acquire, but only in a certain degree, and if he attend to them too closely, in order to obtain perfection in them, the same evil effects will follow. The object also which a man sets before him makes a great difference; if he does or learns anything for his own sake or for the sake of his friends, or with a view to excellence, the action will not appear illiberal; but if done for the sake of others, the very same action will be thought menial and servile. The received subjects of instruction, as I have already remarked, are partly of a liberal and partly of an illiberal character. The customary branches of education are in number four; they are—(1) reading and writing, (2) gymnastic exercises, (3) music, to which is sometimes added (4) drawing. Of these, reading and writing and drawing are regarded as useful for the purposes of life in a variety of ways, and gymnastic exercises are thought to infuse courage. Concerning music a doubt may be raised—in our own day most men cultivate it for the sake of pleasure, but originally it was included in education, because nature herself, as has been often said, requires that we should be able, not only to work well, but to use leisure well; for, as I must repeat once and again, the first principle of all action is leisure. Both are required, but leisure is better than occupation; and therefore the ques-

tion must be asked in good earnest, what ought we to do when at leisure? Clearly we ought not to be amusing ourselves, for then amusement would be the end of life. But if this is inconceivable, and yet amid serious occupations amusement is needed more than at other times (for he who is hard at work has need of relaxation, and amusement gives relaxation, whereas occupation is always accompanied with exertion and effort), at suitable times we should introduce amusements, and they should be our medicines, for the emotion which they create in the soul is a relaxation, and from the pleasure we obtain rest. . . . It is clear then that there are branches of learning and education which we must study with a view to the enjoyment of leisure, and these are to be valued for their own sake; whereas those kinds of knowledge which are useful in business are to be deemed necessary, and exist for the sake of other things. And therefore our fathers admitted music into education, not on the ground either of its necessity or utility, for it is not necessary, nor indeed useful in the same manner as reading and writing, which are useful in money-making, in the management of a household, in the acquisition of knowledge and in political life, nor like drawing, useful for a more correct judgment of the works of artists, nor again like gymnastic, which gives health and strength; for neither of these is to be gained from music. There remains, then, the use of music for intellectual enjoyment in leisure; which appears to have been the reason of its introduction, this being one of the ways in which it is thought that a freeman should pass his leisure. . . . We are now in a position to say that the ancients witness to us; for their opinion may be gathered from the fact that music is one of the received and traditional branches of education. Further, it is clear that children should be instructed in some useful things,—for example, in reading and writing,—not only for their usefulness, but also because many other sorts of knowledge are acquired through them. With a like view they may be taught drawing, not to prevent their making mistakes in their own purchases, or in order that they may not be imposed upon in the buying or selling of articles, but rather because it makes them judges of the beauty of the human form. To be always seeking after the useful does not become free and exalted souls. . . . We reject the professional instruments and also the professional mode of education in music—and by professional we mean that which is adopted in contests, for in this the performer practises the art, not for the sake of his own improvement, but in order to give pleasure, and that of a vulgar sort, to his hearers. For this reason the execution of such music is not the part of a freeman but of a paid performer, and the result is that the performers are vulgarized, for the end at which they aim is bad.”—Aristotle, *Politics* (*Jowett's Translation*), bk. 8.—“The most striking difference between early Greek education and ours was undoubtedly this: that the physical development of boys was attended to in a special place and by a special master. It was not thought sufficient for them to play the chance games of childhood; they underwent careful bodily training under a very fixed system, which was determined by the athletic contests of after life. . . . When we compare what the Greeks afforded to their boys, we find it divided into two contrasted kinds of exer-

cise: hunting, which was practised by the Spartans very keenly, and no doubt also by the Eleans and Arcadians, as may be seen from Xenophon's ‘Tract on (Hare) Hunting’; and gymnastics, which in the case of boys were carried on in the so-called *palæstra*, a sort of open-air gymnasium (in our sense) kept by private individuals as a speculation, and to which the boys were sent, as they were to their ordinary schoolmaster. We find that the Spartans, who had ample scope for hunting with dogs in the glens and coverts of Mount Taygetus, rather despised mere exercises of dexterity in the *palæstra*, just as our sportsmen would think very little of spending hours in a gymnasium. But those Greeks who lived in towns like Athens, and in the midst of a thickly populated and well-cultivated country, could not possibly obtain hunting, and therefore found the most efficient substitute. Still we find them very far behind the English in their knowledge or taste for out-of-door games. . . . The Greeks had no playgrounds beyond the *palæstra* or gymnasium; they had no playgrounds in our sense, and though a few proverbs speak of swimming as a universal accomplishment which boys learned, the silence of Greek literature on the subject makes one very suspicious as to the generality of such training. . . . In one point, certainly, the Greeks agreed more with the modern English than with any other civilised nation. They regarded sport as a really serious thing. . . . The names applied to the exercising-places indicate their principal uses. *Palæstra* means a wrestling place; gymnasium originally a place for naked exercise, but the word early lost this connotation and came to mean mere physical training. . . . In order to leave home and reach the *palæstra* safely as well as to return, Greek boys were put under the charge of a *pedagogue*, in no way to be identified (as it now is) with a schoolmaster. . . . I think we may be justified in asserting that the study of the epic poets, especially of the *Iliad* and *Odyssey*, was the earliest intellectual exercise of schoolboys, and, in the case of fairly educated parents, even anticipated the learning of letters. For the latter is never spoken of as part of a mother's or of home education. Reading was not so universal or so necessary as it now is. . . . We may assume that books of Homer were read or recited to growing boys, and that they were encouraged or required to learn them off by heart. This is quite certain to all who estimate justly the enormous influence ascribed to Homer, and the principles assumed by the Greeks to have underlain his work. He was universally considered to be a moral teacher, whose characters were drawn with a moral intent, and for the purpose of example or avoidance. . . . Accordingly the *Iliad* and *Odyssey* were supposed to contain all that was useful, not only for godliness, but for life. All the arts and sciences were to be derived (by interpretation) from these sacred texts. . . . In early days, and in poor towns, the place of teaching was not well appointed, nay, even in many places, teaching in the open air prevailed. . . . This was . . . like the old hedge schools of Ireland, and no doubt of Scotland too. They also took advantage, especially in hot weather, of colonnades, or shady corners among public buildings, as at Winchester the summer term was called *cloister-time*, from a similar practice, even in that wealthy foundation, of instructing in the cloisters. On the other hand, properly appointed schools in

respectable towns were furnished with some taste, and according to traditional notions. . . . We may be sure that there were no tables or desks, such furniture being unusual in Greek houses; it was the universal custom, while reading or writing, to hold the book or roll on the knee—to us an inconvenient thing to do, but still common in the East. There are some interesting sentences, given for exercise in Greek and Latin, in the little known 'Interpretamenta' of Dositheus, now edited and explained by German scholars. The entry of the boy is thus described, in parallel Greek and Latin: 'First I salute the master, who returns my salute: Good morning, master; good morning, school fellows. Give me my place, my seat, my stool. 'Sit closer. Move up that way. This is my place, I took it first.' This mixture of politeness and wrangling is amusing, and no doubt to be found in all ages. It seems that the seats were movable. . . . The usual subdivision of education was into three parts; letters, . . . including reading, writing, counting, and learning of the poets; music in the stricter sense, including singing and playing on the lyre; and lastly gymnastic, which included dancing. . . . It is said that at Sparta the education in reading and writing was not thought necessary, and there have been long discussions among the learned whether the ordinary Spartan in classical days was able to read. We find that Aristotle adds a fourth subject to the three above named—drawing, which he thinks requisite, like music, to enable the educated man to judge rightly of works of art. But there is no evidence of a wide diffusion of drawing or painting among the Greeks, as among us. . . . Later on, under the learned influences of Alexandria, and the paid professoriate of Roman days, subjects multiplied with the decline of mental vigour and spontaneity of the age, and children began to be pestered, as they now are, with a quantity of subjects, all thought necessary to a proper education, and accordingly all imperfectly acquired. This was called the encyclical education, which is preserved in our *Encyclopædia of knowledge*. It included, (1) grammar, (2) rhetoric, (3) dialectic, (4) arithmetic, (5) music, (6) geometry, (7) astronomy, and these were divided into the earlier Trivium, and the later Quadrivium."—J. P. Mahaffy, *Old Greek Education*, ch. 3-5.—"Reading was taught with the greatest pains, the utmost care was taken with the intonation of the voice, and the articulation of the throat. We have lost the power of distinguishing between accent and quantity. The Greeks did not acquire it without long and anxious training of the ear and the vocal organs. This was the duty of the phonascus. Homer was the common study of all Greeks. The *Iliad* and *Odyssey* were at once the Bible, the Shakespeare, the Robinson Crusoe, and the Arabian Nights of the Hellenic race. Long passages and indeed whole books were learnt by heart. The Greek, as a rule, learnt no language but his own. Next to reading and repetition came writing, which was carefully taught. Composition naturally followed, and the burden of correcting exercises, which still weighs down the backs of schoolmasters, dates from these early times. Closely connected with reading and writing is the art of reckoning, and the science of numbers leads us easily to music. Plato considered arithmetic as the best spur to a sleepy and un instructed spirit;

we see from the Platonic dialogues how mathematical problems employed the mind and thoughts of young Athenians. Many of the more difficult arithmetical operations were solved by geometrical methods, but the Greeks carried the art of teaching numbers to considerable refinement. They used the abacus, and had an elaborate method of finger reckoning, which was serviceable up to 10,000. Drawing was the crowning accomplishment to this vestibule of training. By the time the fourteenth year was completed, the Greek boy would have begun to devote himself seriously to the practice of athletics."—O. Browning, *An Introduction to the History of Educational Theories*, ch. 1.—"It has sometimes been imagined that in Greece separate edifices were not erected as with us expressly for school-houses, but that both the *didaskalos* and the philosopher taught their pupils in fields, gardens or shady groves. But this was not the common practice, though many schoolmasters appear to have had no other place wherein to assemble their pupils than the portico of a temple or some sheltered corner in the street, where in spite of the din of business and the throng of passengers the worship of learning was publicly performed. . . . But these were the schools of the humbler classes. For the children of the noble and the opulent spacious structures were raised, and furnished with tables, desks,—for that peculiar species of *grammateion* which resembled the plate cupboard, can have been nothing but a desk,—forms, and whatsoever else their studies required. Mention is made of a school at Chios which contained one hundred and twenty boys, all of whom save one were killed by the falling in of the roof. . . . The apparatus of an ancient school was somewhat complicated: there were mathematical instruments, globes, maps, and charts of the heavens, together with boards whereon to trace geometrical figures, tablets, large and small, of box-wood, fir, or ivory, triangular in form, some folding with two, and others with many leaves; books too and paper, skins of parchment, wax for covering the tablets, which, if we may believe Aristophanes, people sometimes ate when they were hungry. To the above were added rulers, reed-pens, pen-cases, pen-knives, pencils, and last, though not least, the rod which kept them to the steady use of all these things. At Athens these schools were not provided by the state. They were private speculations, and each master was regulated in his charges by the reputation he had acquired and the fortunes of his pupils. Some appear to have been extremely moderate in their demands. . . . The earliest task to be performed at school was to gain a knowledge of the Greek characters, large and small, to spell next, next to read. . . . In teaching the art of writing their practice nearly resembled our own. . . . These things were necessarily the first step in the first class of studies, which were denominated music, and comprehended everything connected with the development of the mind; and they were carried to a certain extent before the second division called gymnastics was commenced. They reversed the plan commonly adopted among ourselves, for with them poetry preceded prose, a practice which, coöperating with their susceptible temperament, impressed upon the national mind that imaginative character for which it was preëminently distinguished. And the poets in whose works they were first initiated were of all the most poetical,

the authors of lyrical and dithyrambic pieces, selections from whose verses they committed to memory, thus acquiring early a rich store of sentences and imagery ready to be adduced in argument or illustration, to furnish familiar allusions or to be woven into the texture of their style. . . . Among the other branches of knowledge most necessary to be studied, and to which they applied themselves nearly from the outset, was arithmetic, without some inkling of which, a man, in Plato's opinion, could scarcely be a citizen at all. . . . The importance attached to this branch of education, nowhere more apparent than in the dialogues of Plato, furnishes one proof that the Athenians were preëminently men of business, who in all their admiration for the good and beautiful never lost sight of those things which promote the comfort of life, and enable a man effectually to perform his ordinary duties. With the same views were geometry and astronomy pursued. . . . The importance of music, in the education of the Greeks, is generally understood. It was employed to effect several purposes. First, to sooth and mollify the fierceness of the national character, and prepare the way for the lessons of the poets, which, delivered amid the sounding of melodious strings, when the soul was rapt and elevated by harmony, by the excitement of numbers, by the magic of the sweetest associations, took a firm hold upon the mind, and generally retained it during life. Secondly, it enabled the citizens gracefully to perform their part in the amusements of social life, every person being in his turn called upon at entertainments to sing or play upon the lyre. Thirdly, it was necessary to enable them to join in the sacred choruses, rendered frequent by the piety of the state, and for the due performance in old age of many offices of religion, the sacerdotal character belonging more or less to all the citizens of Athens. Fourthly, as much of the learning of a Greek was martial and designed to fit him for defending his country, he required some knowledge of music that on the field of battle his voice might harmoniously mingle with those of his countrymen, in chaunting those stirring, impetuous, and terrible melodies, called pæans, which preceded the first shock of fight. For some, or all of these reasons, the science of music began to be cultivated among the Hellenes, at a period almost beyond the reach even of tradition."—J. A. St. John, *The Hellenes*, bk. 2, ch. 4.—"In thinking of Greek education as furnishing a possible model for us moderns, there is one point which it is important to bear in mind: Greek education was intended only for the few, for the wealthy and well-born. Upon all others, upon slaves, barbarians, the working and trading classes, and generally upon all persons spending their lives in pursuit of wealth or any private ends whatsoever, it would have seemed to be thrown away. Even well-born women were generally excluded from most of its benefits. The subjects of education were the sons of full citizens, themselves preparing to be full citizens, and to exercise all the functions of such. The duties of such persons were completely summed up under two heads, duties to the family and duties to the State, or, as the Greeks said, economic and political duties. The free citizen not only acknowledged no other duties besides these, but he looked down upon persons who sought occupation in any other sphere. Economy and Politics, however, were very comprehensive terms. The for-

mer included the three relations of husband to wife, father to children, and master to slaves and property; the latter, three public functions, legislative, administrative, and judiciary. All occupations not included under these six heads the free citizen left to slaves or resident foreigners. Money-making, in the modern sense, he despised, and, if he devoted himself to art or philosophy, he did so only for the benefit of the State."—T. Davidson, *Aristotle*, bk. 1, ch. 4.—**Spartan Training.**—"From his birth every Spartan belonged to the state, which decided . . . whether he was likely to prove a useful member of the community, and extinguished the life of the sickly or deformed infant. To the age of seven however the care of the child was delegated to its natural guardians, yet not so as to be left wholly to their discretion, but subject to certain established rules of treatment, which guarded against every mischievous indulgence of parental tenderness. At the end of seven years began a long course of public discipline, which grew constantly more and more severe as the boy approached toward manhood. The education of the young was in some degree the business of all the elder citizens; for there was none who did not contribute to it, if not by his active interference, at least by his presence and inspection. But it was placed under the especial superintendence of an officer selected from the men of most approved worth; and he again chose a number of youths, just past the age of twenty, and who most eminently united courage with discretion, to exercise a more immediate command over the classes, into which the boys were divided. The leader of each class directed the sports and tasks of his young troop, and punished their offences with military rigour, but was himself responsible to his elders for the mode in which he discharged his office. The Spartan education was simple in its objects; it was not the result of any general view of human nature, or of any attempt to unfold its various capacities: it aimed at training men who were to live in the midst of difficulty and danger, and who could only be safe themselves while they held rule over others. The citizen was to be always ready for the defence of himself and his country, at home and abroad, and he was therefore to be equally fitted to command and to obey. His body, his mind, and his character were formed for this purpose, and for no other: and hence the Spartan system, making directly for its main end, and rejecting all that was foreign to it, attained, within its own sphere, to a perfection which it is impossible not to admire. The young Spartan was perhaps unable either to read or write: he scarcely possessed the elements of any of the arts or sciences by which society is enriched or adorned: but he could run, leap, wrestle, hurl the disk, or the javelin, and wield every other weapon, with a vigour and agility, and grace which were no where surpassed. These however were accomplishments to be learnt in every Greek palaestra: he might find many rivals in all that he could do; but few could approach him in the firmness with which he was taught to suffer. From the tender age at which he left his mother's lap for the public schools, his life was one continued trial of patience. Coarse and scanty fare, and this occasionally withheld, a light dress, without any change in the depth of winter, a bed of reeds, which he himself gathered from the Eurotas, blows exchanged with his comrades,

stripes inflicted by his governors, more by way of exercise than of punishment, injured him to every form of pain and hardship. . . . The Muses were appropriately honoured at Sparta with a sacrifice on the eve of a battle, and the union of the spear and the lyre was a favourite theme with the Laconian poets, and those who sang of Spartan customs. Though bred in the discipline of the camp, the young Spartan, like the hero of the *Iliad*, was not a stranger to music and poetry. He was taught to sing, and to play on the flute and the lyre: but the strains with which his memory was stored, and to which his voice was formed, were either sacred hymns, or breathed a martial spirit; and it was because they cherished such sentiments that the Homeric lays, if not introduced by Lycurgus, were early welcomed at Sparta. . . . As these musical exercises were designed to cultivate, not so much an intellectual, as a moral taste; so it was probably less for the sake of sharpening their ingenuity, than of promoting presence of mind, and promptness of decision, that the boys were led into the habit of answering all questions proposed to them, with a ready, pointed, sententious brevity, which was a proverbial characteristic of Spartan conversation. But the lessons which were most studiously inculcated, more indeed by example than by precept, were those of modesty, obedience, and reverence for age and rank; for these were the qualities on which, above all others, the stability of the commonwealth reposed. The gait and look of the Spartan youths, as they passed along the streets, observed Xenophon, breathed modesty and reserve. In the presence of their elders they were bashful as virgins, and silent as statues, save when a question was put to them. . . . In truth, the respect for the laws, which rendered the Spartan averse to innovation at home, was little more than another form of that awe with which his early habits inspired him for the magistrates and the aged. With this feeling was intimately connected that quick and deep sense of shame, which shrank from dishonour as the most dreadful of evils, and enabled him to meet death so calmly, when he saw in it the will of his country."—C. Thirlwall, *Hist. of Greece*, v. 1, ch. 8.

—**Free-School Ideas in Greece.**—"It is a prevalent opinion that common schools, as we now have them, were an American invention. No legislation, it is asserted, taxing all in order that all may be taught can be traced back further than to the early laws of Massachusetts. Those who deny this assertion are content with showing something of the sort in Scotland and Germany a generation or two before the landing of the Plymouth pilgrims. The truth is, however, that, as much of our social wit is now credited to the ancient Greeks, something of our educational wisdom ought to be. Two centuries ago John Locke, as an able political writer, was invited to draw up a code of fundamental laws for the new colony of Carolina, and in like manner, more than 2,300 years ago, Charondas, a master of a similar type in Magna Græcia, was called to a similar task. This was to frame a series of statutes for the government of a Greek colony founded about 446 B. C., in the foot of Italy. This colony was Thurii, and conspicuous among the enactments of Charondas was the following: 'Charondas made a law unlike those of lawgivers before him, for he enacted that the sons of the citizens should all learn letters (or writing) . . .

the city making payment to the teachers. He thought that the poor, not able to pay wages themselves, would otherwise fail of the best training. He counted writing the most important study, and with reason. Through writing, most things in life, and those the most useful, are accomplished—as ballots, epistles, laws, covenants. Who can sufficiently praise the learning of letters? . . . Writing alone preserves the most brilliant utterances of wise men and the oracles of gods, nay philosophy and all culture. All these things it alone hands down to all future generations. Wherefore nature should be viewed as the source of life, but the source of living well we should consider the culture derived from writing. Inasmuch, then, as illiterates are deprived of a great good, Charondas came to their help, judging them worthy of public care and outlay. Former legislators had caused the sick to be attended by physicians at the public expense, thinking their bodies worthy of cure. He did more, for he cured souls afflicted with ignorance. The doctors of the body we pray that we may never need, while we would fain abide for ever with those who minister to the mind diseased.'—This extract is from the '*Bibliotheca Historica*' of Diodorus Siculus (Book x. § 13), who was flourishing at the birth of Christ and was the most painstaking chronicler of the Augustan age. The legislation is worth notice for more than one reason. It rebukes the self-conceit of those who hold that the education of all at the charge of all is an idea born in our own time or country. It has also been strangely unnoticed by historians who ought to have kept it before the people."—*The Nation*, March 24, 1892, pp. 230-231.

—**Socrates and the Philosophical Schools.**—"Before the rise of philosophy, the teacher of the people had been the rhapsode, or public reciter; after that event he gradually gives place to the sophist (. . . one who makes wises), or, as he later with more modesty calls himself, the philosopher (. . . lover of wisdom). The history of Greece for centuries is, on its inner side, a history of the struggle between what the rhapsode represents and what the philosopher represents, between popular tradition and common sense on the one hand, and individual opinion and philosophy on the other. The transition from the first to the second of these mental conditions was accomplished for the world, once for all, by the Greeks."—T. Davidson, *Aristotle*, bk. 1, ch. 5.—"There is no instance on record of a philosopher whose importance as a thinker is so closely bound up with the personality of the man as it was in the case of Socrates. . . . His teaching was not of a kind to be directly imparted and faithfully handed down, but could only be left to propagate itself freely by stirring up others to a similar self-culture. . . . The youth and early manhood of Socrates fall in the most brilliant period of Grecian history. Born during the last years of the Persian war, he was a near contemporary of all those great men who adorned the age of Pericles. As a citizen of Athens he could enjoy the opportunities afforded by a city, which united every means of culture by its unrivalled fertility of thought. Poverty and low birth were but slender obstacles in the Athens of Pericles. . . . Socrates, no doubt, began life by learning his father's trade, . . . which he probably never practised, and certainly soon gave up. He considered it to be his special calling to labour

for the moral and intellectual improvement of himself and others—a conviction which he felt so strongly that it appeared to him in the light of a divine revelation. Moreover he was confirmed in it by a Delphic oracle, which, of course, must not be regarded as the cause of, but rather as an additional support to his reforming zeal. . . . To be independent, he tried, like the Gods, to rise superior to his wants; and by carefully practising self-denial and abstinence, he was really able to boast that his life was more pleasant and more free from troubles than that of the rest of mankind. Thus he was able to devote his whole powers to the service of others, without asking or taking reward; and thus he became so engrossed by his labours for his native city, that he rarely passed its boundaries or even went outside its gates. He did not, however, feel himself called upon to take part in the affairs of the state. . . . Any one convinced as he was, that care for one's own culture must precede care for public business, and that a thorough knowledge of self, together with a deep and many-sided experience, was a necessary condition of public activity, must have thought that, to educate individuals by influence, was the more pressing need, and have held that he was doing his country a better service by educating able statesmen for it, than by actually discharging a statesman's duties. Accordingly, Socrates never aimed at being anything but a private citizen. . . . Just as little was he desirous of being a public teacher like the Sophists. He not only took no pay, but he gave no methodical course. He did not profess to teach, but to learn in common with others, not to force his convictions upon them, but to examine theirs; not to pass the truth that came to hand like a coin fresh from the mint, but to stir up a desire for truth and virtue, to point out the way to it, to overthrow what was spurious, and to seek out real knowledge. Never weary of talking, he was on the look out for every opportunity of giving an instructive and moral turn to the conversation. Day by day he was about in the market and public promenades, in schools and workshops, ever ready to converse with friends or strangers, with citizens and foreigners, but always prepared to lead them to higher subjects; and whilst thus in his higher calling serving God, he was persuaded that he was also serving his country in a way that no one else could do. Deeply as he deplored the decline of discipline and education in his native city, he felt that he could depend but little on the Sophists, the moral teachers of his day. The attractive powers of his discourse won for him a circle of admirers, for the most part consisting of young men of family, drawn to him by the most varied motives, standing to him in various relations, and coming to him, some for a longer, others for a shorter time. For his own part, he made it his business not only to educate these friends, but to advise them in everything, even in worldly matters. But out of this changing, and in part loosely connected, society, a nucleus was gradually formed of decided admirers,—a Socratic school, which we must consider united far less by a common set of doctrines, than by a common love for the person of Socrates.”—E. Zeller, *Socrates and the Socratic Schools*, ch. 3.—“Nowhere, except in Athens, do we hear of a philosophic body with endowments, legal succession,

and the other rights of a corporation. This idea, which has never since died out of the world, was due to Plato, who bequeathed his garden and appointments in the place called after the hero Hekademos, to his followers. But he was obliged to do it in the only form possible at Athens. He made it a religious foundation, on the basis of a fixed worship to the Muses. . . . The head or President of Plato's ‘Association of the Muses,’ was the treasurer and manager of the common fund, who invited guests to their feasts, to which each member contributed his share. . . . The members had, moreover, a right to attend lectures and use the library or scientific appointments, such as maps, which belonged to the school. It was this endowment on a religious basis which saved the income and position of Plato's school for centuries. . . . This then is the first Academy, so often imitated in so many lands, and of which our colleges are the direct descendants. . . . The school of Plato, then governed by Xenocrates, being the bequest of an Athenian citizen who understood the law, seems never to have been assailed. The schools of Epicurus and Zeno were perhaps not yet recognised. But that of Theophrastus, perhaps the most crowded, certainly the most distinctly philo-Macedonian, . . . this was the school which was exiled, and which owed its rehabilitation not only to the legal decision of the courts, but still more to the large views of King Demetrius, who would not tolerate the persecution of opinion. But it was the other Demetrius, the philosopher, the pupil of Aristotle, the friend of Theophrastus, to whom the school owed most, and to whom the world owes most in the matter of museums and academies, next after Plato. For this was the man who took care, during his Protectorate of Athens in the interest of Casander, to establish a garden and ‘peripatos’ for the Peripatetic school, now under Theophrastus. . . . It is remarkable that the Stoic school—it too the school of aliens—did not establish a local foundation or succession, but taught in public places, such as the Painted Portico. In this the Cynical tone of the Porch comes out. Hence the succession, depended upon the genius of the leader.”—J. P. Mahaffy, *Greek Life and Thought*, ch. 7.—An account of the Academy, the Lyceum, etc., will be found under the caption GYMNASIA.—**University of Athens.**—“Some scholars . . . may doubt if there was anything at Athens which could answer to the College Life of modern times. Indeed it must be owned that formal history is nearly silent on the subject, that ancient writers take little notice of it, and such evidences as we have are drawn almost entirely from a series of inscriptions on the marble tablets, which were covered with the ruins and the dust of ages, till one after another came to light in recent days, to add fresh pages to the story of the past. Happily they are both numerous and lengthy, and may be already pieced together in an order which extends for centuries. They are known to Epigraphic students as the records which deal with the so-called Ephebi; with the youths, that is, just passing into manhood, for whom a special discipline was provided by the State, to fit them for the responsibilities of active life. It was a National system with a many-sided training; the teachers were members of the Civil Service; the registers were public documents, and, as such, belonged to the Archives of the

State. The earlier inscriptions of the series date from the period of Macedonian ascendancy, but in much earlier times there had been forms of public drill prescribed for the Ephebi. . . . We find from a decree, which, if genuine, dates even from the days of Pericles, that the young men of Cos were allowed by special favour to share the discipline of the Athenian Ephebi. Soon afterwards others were admitted on all sides. The aliens who had gained a competence as merchants or as bankers, found their sons welcomed in the ranks of the oldest families of Athens; strangers flocked thither from distant countries, not only from the isles of Greece, and from the coasts of the Ægean, but, as Hellenic culture made its way through the far East, students even of the Semitic race were glad to enrol their names upon the College registers, where we may still see them with the marks of their several nationalities affixed. The young men were no longer, like soldiers upon actual service, beginning already the real work of life, and on that account, perhaps, the term was shortened from the two years to one; but the old associations lasted on for ages, even in realistic Athens, which in early politics at least had made so clean a sweep. The outward forms were still preserved, the soldier's drill was still enforced, and though many another feature had been added, the whole institution bore upon its face the look rather of a Military College than of a training school for a scholar or a statesman. The College year began somewhat later than the opening of the civil year, and it was usual for all the students to matriculate together; that is, to enter formally their names upon the registers, which were copied afterwards upon the marble tablets, of which large fragments have survived. . . . 'To put the gown on,' or, as we should say, 'to be a gownsman,' was the phrase which stood for being a member of the College; and the gown, too, was of black, as commonly among ourselves. But Philostratus tells us, by the way, that a change was made from black to white at the prompting of Herodes Atticus, the munificent and learned subject of the Antonines, who was for many years the presiding genius of the University of Athens. The fragment of an inscription lately found curiously confirms and supplements the writer's statement. . . . The members of the College are spoken of as 'friends' and 'messmates'; and it is probable that some form of conventual life prevailed among them, without which the drill and supervision, which are constantly implied in the inscriptions, could scarcely have been enforced by the officials. But we know nothing of any public buildings for their use save the gymnasia, which in all Greek towns were the centres of educational routine, and of which there were several well known at Athens. . . . The College did not try to monopolise the education of its students. It had, indeed, its own tutors or instructors, but they were kept for humbler drill; it did not even for a long time keep an organist or choirmaster of its own; it sent its students out for teaching in philosophy and rhetoric and grammar, or, in a word, for all the larger and more liberal studies. Nor did it favour any special set of tenets to the exclusion of the rest. It encouraged impartially all the schools of higher thought. . . . The Head of the College held the title of Cosmetes, or of rector. . . . The Rector, appointed only for a

year by popular election, was no merely honorary head, but took an important part in the real work of education. He was sometimes clothed with priestly functions. . . . The system of education thus described was under the control of the government throughout. . . . It may surprise us that our information comes almost entirely from the inscriptions, and that ancient writers are all nearly silent on the subject. . . . But there was little to attract the literary circles in arrangements so mechanical and formal; there was too much of outward pageantry, and too little of real character evolved."—W. W. Capes, *University Life in Ancient Athens*, ch. 1.—J. H. Newman, *Historical Sketches*, ch. 4.—The reign of the Emperor Justinian "may be signalled as the fatal epoch at which several of the noblest institutions of antiquity were abolished. He shut the schools of Athens (A. D. 529), in which an uninterrupted succession of philosophers, supported by a public stipend, had taught the doctrines of Plato, Aristotle, Zeno, and Epicurus, ever since the time of the Antonines. They were, it is true, still attached to paganism, and even to the arts of magic."—J. C. L. de Sismondi, *Fall of the Roman Empire*, v. 1, ch. 10.—See ATHENS: A. D. 529.

Alexandria.—"Ptolemy, upon whom, on Alexander's death, devolved the kingdom of Egypt, supplies us with the first great instance of what may be called the establishment of Letters. He and Eumenes may be considered the first founders of public libraries. . . . A library, however, was only one of two great conceptions brought into execution by the first Ptolemy; and as the first was the embalming of dead genius, so the second was the endowment of living. . . . Ptolemy, . . . prompted, or at least, encouraged, by the celebrated Demetrius of Phalerus, put into execution a plan for the formal endowment of literature and science. The fact indeed of the possession of an immense library seemed sufficient to render Alexandria a University; for what could be a greater attraction to the students of all lands, than the opportunity afforded them of intellectual converse, not only with the living, but with the dead, with all who had anywhere at any time thrown light upon any subject of inquiry? But Ptolemy determined that his teachers of knowledge should be as stationary and as permanent as his books; so, resolving to make Alexandria the seat of a 'Studium Generale,' he founded a College for its domicile, and endowed that College with ample revenues. Here, I consider, he did more than has been commonly done, till modern times. It requires considerable knowledge of medieval Universities to be entitled to give an opinion; as regards Germany, for instance, or Poland, or Spain; but, as far as I have a right to speak, such an endowment has been rare down to the sixteenth century, as well as before Ptolemy. . . . To return to the Alexandrian College. It was called the Museum,—a name since appropriated to another institution connected with the seats of science. . . . There was a quarter of the city so distinct from the rest in Alexandria, that it is sometimes spoken of as a suburb. It was pleasantly situated on the water's edge, and had been set aside for ornamental buildings, and was traversed by groves of trees. Here stood the royal palace, here the theatre and amphitheatre; here the gymnasia and stadium; here

the famous Serapeum. And here it was, close upon the Port, that Ptolemy placed his Library and College. As might be supposed, the building was worthy of its purpose; a noble portico stretched along its front, for exercise or conversation, and opened upon the public rooms devoted to disputations and lectures. A certain number of Professors were lodged within the precincts, and a handsome hall, or refectory, was provided for the common meal. The Prefect of the house was a priest, whose appointment lay with the government. Over the Library a dignified person presided. . . . As to the Professors, so liberal was their maintenance, that a philosopher of the very age of the first foundation called the place a 'bread basket,' or a 'bird coop'; yet, in spite of accidental exceptions, so careful on the whole was their selection, that even six hundred years afterwards, Ammianus describes the Museum under the title of 'the last- ing abode of distinguished men.' Philostratus, too, about a century before, calls it 'a table gathering together celebrated men.' . . . As time went on new Colleges were added to the original Museum; of which one was a foundation of the Emperor Claudius, and called after his name. . . . A diversity of teachers secured an abundance of students. 'Hither,' says Cave, 'as to a public emporium of polite literature, congregated, from every part of the world, youthful students, and attended the lectures in Grammar, Rhetoric, Poetry, Philosophy, Astronomy, Music, Medicine, and other arts and sciences'; and hence proceeded, as it would appear, the great Christian writers and doctors, Clement, . . . Origen, Anatolius, and Athanasius. St. Gregory Thaumaturgus, in the third century, may be added; he came across Asia Minor and Syria from Pontus, as to a place, says his namesake of Nyssa, 'to which young men from all parts gathered together, who were applying themselves to philosophy.' As to the subjects taught in the Museum, Cave has already enumerated the principal; but he has not done justice to the peculiar character of the Alexandrian school. From the time that science got out of the hands of the pure Greeks, into those of a power which had a talent for administration, it became less theoretical, and bore more distinctly upon definite and tangible objects. . . . Egyptian Antiquities were investigated, at least by the disciples of the Egyptain Manetho, fragments of whose history are considered to remain; while Carthaginian and Etruscan had a place in the studies of the Claudian College. The Museum was celebrated, moreover, for its grammarians; the work of Hephæstion 'de Metris' still affords matter of thought to a living Professor of Oxford; and Aristarchus, like the Athenian Priscian, has almost become the nickname for a critic. Yet, eminent as is the Alexandrian school in these departments of science, its fame rests still more securely upon its proficiency in medicine and mathematics. Among its physicians is the celebrated Galen, who was attracted thither from Pergamus; and we are told by a writer of the fourth century, that in his time the very fact of a physician having studied at Alexandria, was an evidence of his science which superseded further testimonial. As to Mathematics, it is sufficient to say, that, of four great ancient names, on whom the modern science is founded, three came from Alexan-

dria. Archimedes indeed was a Syracusan; but the Museum may boast of Apollonius of Perga, Diophantus, a native Alexandrian, and Euclid, whose country is unknown. To these illustrious names, may be added, Eratosthenes of Cyrene, to whom astronomy has obligations so considerable; Pappus; Theon; and Ptolemy, said to be of Pelusium, whose celebrated system, called after him the Ptolemaic, reigned in the schools till the time of Copernicus, and whose Geography, dealing with facts, not theories, is in repute still. Such was the celebrated 'Studium' or University of Alexandria; for a while in the course of the third and fourth centuries, it was subject to reverses, principally from war. The whole of the Bruchion, the quarter of the city in which it was situated, was given to the flames; and, when Hilarion came to Alexandria, the holy hermit, whose rule of life did not suffer him to lodge in cities, took up his lodgment with a few solitaries among the ruins of its edifices. The schools, however, and the library continued; the library was reserved for the Caliph Omar's famous judgment; as to the schools, even as late as the twelfth century, the Jew, Benjamin of Tudela, gives us a surprising report of what he found in Alexandria."—J. H. Newman, *Historical Sketches: Rise and Progress of Universities*, ch. 8.—"In the three centuries which intervened between Alexander and Augustus, Athens was preëminently the training school for philosophy, Rhodes, on the other hand, as the only Greek state of political importance in which a career of grand and dignified activity was open for the orator, distinguished itself in the study of eloquence, while Alexandria rested its fame chiefly on the excellence of its instruction in Philology and Medicine. At a subsequent period the last mentioned University obtained even greater celebrity as having given birth to a school of philosophers who endeavored to combine into a species of theosophic doctrine the mental science of Europe with the more spiritual minded and profoundly human religions of the East. In the third century Alexandria became conspicuous as the headquarters of the Eclectics and Neo-Platonists."—E. Kirkpatrick, *Hist'l Development of Superior Instruction* (Barnard's *Am. Journal of Education*, v. 24, pp. 466-467).

Rome.—"If we cast a final glance at the question of education, we shall find but little to say of it, as far as regards the period before Cicero. In the republican times the state did not trouble itself about the training of youth: a few prohibitory regulations were laid down, and the rest left to private individuals. Thus no public instruction was given; public schools there were, but only as private undertakings for the sake of the children of the rich. All depended on the father; his personal character and the care taken by the mother in education decided the development of the child's disposition. Books there were none; and therefore they could not be put into the hands of children. A few rugged hymns, such as those of the Salii and Arval brothers, with the songs in Fescennine verse, sung on festivals and at banquets, formed the poetical literature. A child would hear, besides, the dirges, or memorial verses, composed by women in honour of the dead, and sometimes, too, the public panegyrics pronounced on their departed relatives, a distinction accorded to women also from the time of Camillus. Whatever was taught a boy by father or

mother, or acquired externally to the house, was calculated to make the Roman 'virtus' appear in his eyes the highest aim of his ambition; the term including self-mastery, an unbending firmness of will, with patience, and an iron tenacity of purpose in carrying through whatever was once acknowledged to be right. The Greek palestra and its naked combatants always seemed strange and offensive to Roman eyes. In the republican times the exercises of the gymnasium were but little in fashion; though riding, swimming, and other warlike exercises were industriously practised, as preparations for the campaign. The slave *pædagogus*, assigned to young people to take charge of them, had a higher position with the Romans than the Greeks; and was not allowed to let his pupils out of his sight till their twentieth year. The Latin *Odyssey* of Livius Andronicus was the school-book first in use; and this and Ennius were the only two works to create and foster a literary taste before the destruction of Carthage. The freedman Sp. Carvilius was the first to open a school for higher education. After this the Greek language and literature came into the circle of studies, and in consequence of the wars in Sicily, Macedon, and Asia, families of distinction kept slaves who knew Greek. Teachers quickly multiplied, and were either liberti, or their descendants. No free-born Roman would consent to be a paid teacher, for that was held to be a degradation. The Greek language remained throughout the classical one for Romans: they even made their children begin with Homer. As, by the seventh century of the republic, Ennius, Plautus, Pacuvius, and Terence, had already become old poets, dictations were given to scholars from their writings. The interpretation of Virgil began under Augustus, and by this time the younger Romans were resorting to Athens, Rhodes, Apollonia, and Mytilene, in order to make progress in Greek rhetoric and philosophy. As Roman notions were based entirely on the practical and the useful, music was neglected as a part of education; while, as a contrast, boys were compelled to learn the laws of the twelve tables by heart. Cicero, who had gone through this discipline with other boys of his time, complains of the practice having begun to be set aside; and Scipio *Æmilianus* deplored, as an evil omen of degeneracy, the sending of boys and girls to the academies of actors, where they learnt dancing and singing, in company with young women of pleasure. In one of these schools were to be found as many as five hundred young persons, all being instructed in postures and motions of the most abandoned kind. . . . On the other hand, the gymnastic exercises, which had once served the young men as a training for war, fell into disuse, having naturally become objectless and burdensome, now that, under Augustus, no more Roman citizens chose to enlist in the legions. Still slavery was, and continued to be, the foremost cause of the depravation of youth, and of an evil education. . . . It was no longer the mothers who educated their own children: they had neither inclination nor capacity for such duty, for mothers of the stamp of Cornelia had disappeared. Immediately on its birth, the child was intrusted to a Greek female slave, with some male slave, often of the worst description, to help her. . . . The young Roman was not educated in the constant companionship of youths of his own age, under equal discipline: surrounded by

his father's slaves and parasites, and always accompanied by a slave when he went out, he hardly received any other impressions than such as were calculated to foster conceit, indolence, and pride in him."—J. J. I. Döllinger, *The Gentile and the Jew*, v. 2, pp. 279-281.—**Higher Education under the Empire.**—"Besides schools of high eminence in Mytilene, Ephesus, Smyrna, Sidon, etc., we read that Apollonia enjoyed so high a reputation for eloquence and political science as to be entrusted with the education of the heir-apparent of the Roman Empire. Antioch was noted for a Museum modelled after that of the Egyptian metropolis, and Tarsus boasted of Gymnasia and a University which Strabo does not hesitate to describe as more than rivaling those of Athens and Alexandria. There can be little doubt that the philosophers, rhetoricians, and grammarians who swarmed in the princely retinues of the great Roman aristocracy, and whose schools abounded in all the most wealthy and populous cities of the empire east and west, were prepared for their several callings in some one or other of these institutions. Strabo tells us . . . that Rome was overrun with Alexandrian and Syrian grammarians, and Juvenal describes one of the Quirites of the ancient stamp as emigrating in sheer disgust from a city which from these causes had become thoroughly and utterly Greek. . . . That external inducements were held out amply sufficient to prevail upon poor and ambitious men to qualify themselves at some cost for vocations of this description is evident from the wealth to which, as we are told, many of them rose from extreme indigence and obscurity. Suetonius, in the still extant fragment of his essay 'de claris rhetoribus,' after alluding to the immense number of professors and doctors met with in Rome, draws attention to the frequency with which individuals who had distinguished themselves as teachers of rhetoric had been elevated into the senate, and advanced to the highest dignities of the state. That the profession of a philologist was occasionally at least well remunerated is evident from the facts recorded by the same author in his work 'de claris grammaticis,' sect. 3. He there mentions that there were at one time upwards of twenty well attended schools devoted to this subject at Rome, and that one fortunate individual, Q. Remmius Palaemon, derived four hundred thousand sesterces, or considerably above three thousand a year, from instruction in philology alone. Julius Caesar conferred the citizenship, together with large bounties in money, and immunity from public burthens, on distinguished rhetoricians and philologists, in order to encourage their presence at Rome. . . . That individuals who thus enjoyed an income not greatly below the revenues of an English Bishopric were not, as the name might lead us to imagine, employed in teaching the accidents of grammar, but possessed considerable pretensions to that higher and more thoughtful character of the scholar which it has been reserved for modern Europe to exhibit in perfection, is not only in itself highly probable, but supported by the distinctest and most unimpeachable evidence. Seneca tells us that history was amongst the subjects professed by grammarians, and Cicero regards the most thorough and refined perception of all that pertains to the spirit and individuality of the author as an in-

dispensable requisite in those who undertake to give instruction in this subject. . . . The grammatici appear to have occupied a position very closely analogous to that of the teachers of collegiate schools in England, and the gymnasial professors in Germany."—E. Kirkpatrick, *Hist. Development of Superior Instruction* (Barnard's Ann. *Journal of Education*, v. 24, pp. 468-470).

Mediæval.

The Chaos of Barbaric Conquest.—"The utter confusion subsequent upon the downfall of the Roman Empire and the irruption of the Germanic races was causing, by the mere brute force of circumstance, a gradual extinction of scholarship too powerful to be arrested. The teaching of grammar for ecclesiastical purposes was insufficient to check the influence of many causes leading to this overthrow of learning. It was impossible to communicate more than a mere tincture of knowledge to students separated from the classical tradition, for whom the antecedent history of Rome was a dead letter. The meaning of Latin words derived from the Greek was lost. . . . Theological notions, grotesque and childish beyond description, found their way into etymology and grammar. The three persons of the Trinity were discovered in the verb, and mystic numbers in the parts of speech. Thus analytical studies like that of language came to be regarded as an open field for the exercise of the mythologising fancy; and etymology was reduced to a system of ingenious punning. . . . Virgil, the only classic who retained distinct and living personality, passed from poet to philosopher, from philosopher to Sibyl, from Sibyl to magician, by successive stages of transmutation, as the truth about him grew more dim and the faculty to apprehend him weakened. Forming the staple of education in the schools of the grammarians, and metamorphosed by the vulgar consciousness into a wizard, he waited on the extreme verge of the dark ages to take Dante by the hand, and lead him, as the type of human reason, through the realms of Hell and Purgatory."—J. A. Symonds, *Renaissance in Italy; the Revival of Learning*, ch. 2.

Gaul: 4th-5th Centuries.—"If institutions could do all, if laws supplied and the means furnished to society could do everything, the intellectual state of Gaulish civil society at this epoch [4th-5th centuries] would have been far superior to that of the religious society. The first, in fact, alone possessed all the institutions proper to second the development of mind, the progress and empire of ideas. Roman Gaul was covered with large schools. The principal were those of Trèves, Bordeaux, Autun, Toulouse, Poitiers, Lyons, Narbonne, Arles, Marseilles, Vienne, Besançon, &c. Some were very ancient; those of Marseilles and of Autun, for example, dated from the first century. They were taught philosophy, medicine, jurisprudence, literature, grammar, astrology, all the sciences of the age. In the greater part of these schools, indeed, they at first taught only rhetoric and grammar; but towards the fourth century, professors of philosophy and law were everywhere introduced. Not only were these schools numerous, and provided with many chairs, but the emperors continually took the professors of new measures into favor. Their interests are, from Constantine to Theodosius the younger, the subject of

frequent imperial constitutions, which sometimes extended, sometimes confirmed their privileges. . . . After the Empire was divided among many masters, each of them concerned himself rather more about the prosperity of his states and the public establishments which were in them. Thence arose a momentary amelioration, of which the schools felt the effects, particularly those of Gaul, under the administration of Constantius Chlorus, of Julian, and of Gratian. By the side of the schools were, in general, placed other analogous establishments. Thus, at Trèves there was a grand library of the imperial palace, concerning which no special information has reached us, but of which we may judge by the details which have reached us concerning that of Constantinople. This last had a librarian and seven scribes constantly occupied—four for Greek, and three for Latin. They copied both ancient and new works. It is probable that the same institution existed at Trèves, and in the great towns of Gaul. Civil society, then, was provided with means of instruction and intellectual development. It was not the same with religious society. It had at this epoch no institution especially devoted to teaching; it did not receive from the state any aid to this particular aim. Christians, as well as others, could frequent the public schools; but most of the professors were still pagans. . . . It was for a long time in the inferior classes, among the people, that Christianity was propagated, especially in the Gauls, and it was the superior classes which followed the great schools. Moreover, it was hardly until the commencement of the fourth century that the Christians appeared there, and then but few in number. No other source of study was open to them. The establishments which, a little afterwards, became, in the Christian church, the refuge and sanctuary of instruction, the monasteries, were hardly commenced in the Gauls. It was only after the year 360 that the two first were founded by St. Martin—one at Ligugé, near Poitiers, the other at Marmoutiers, near Tours; and they were devoted rather to religious contemplation than to teaching. Any great school, any special institution devoted to the service and to the progress of intellect, was at that time, therefore, wanting to the Christians. . . . All things in the fifth century, attest the decay of the civil schools. The contemporaneous writers, Sidonius Apollinaris and Mamertius Claudianus, for example, deplore it in every page, saying that the young men no longer studied, that professors were without pupils, that science languished and was being lost. . . . It was especially the young men of the superior classes who frequented the schools; but these classes . . . were in rapid dissolution. The schools fell with them; the institutions still existed, but they were void—the soul had quitted the body. The intellectual aspect of Christian society was very different. . . . Institutions began to rise, and to be regulated among the Christians of Gaul. The foundation of the greater portion of the large monasteries of the southern provinces belongs to the first half of the fifth century. . . . The monasteries of the south of Gaul were philosophical schools of Christianity; it was there that intellectual men meditated, discussed, taught; it was from thence that new ideas, daring thoughts, heresies, were sent forth. . . . Towards the end of the sixth century, everything is changed:

there are no longer civil schools; ecclesiastical schools alone subsist. Those great municipal schools of Trèves, of Poitiers, of Vienne, of Bordeaux, &c., have disappeared; in their place have arisen schools called cathedral or episcopal schools, because each episcopal see had its own. The cathedral school was not always alone, we find in certain dioceses other schools, of an uncertain nature and origin, wrecks, perhaps, of some ancient civil school, which, in becoming metamorphosed, had perpetuated itself. . . . The most flourishing of the episcopal schools from the sixth to the middle of the eighth century were those of: 1. Poitiers. There were many schools in the monasteries of the diocese at Poitiers itself, at Ligugé, at Ansion, &c. 2. Paris. 3. Le Mans. 4. Bourges. 5. Clermont. There was another school in the town where they taught the Theodosian code; a remarkable circumstance, which I do not find elsewhere. 6. Vienne. 7. Châlons-sur-Saône. 8. Arles. 9. Gap. The most flourishing of the monastic schools of the same epoch were those of: 1. Luxeuil, in Franche-Comté. 2. Fontenelle, or Saint Vandrille, in Normandy; in which were about 300 students. 3. Sithiu, in Normandy. 4. Saint Médard, at Soissons. 5. Lerens. It were easy to extend this list; but the prosperity of monastic schools was subject to great vicissitudes; they flourished under a distinguished abbot, and declined under his successor. Even in nunneries, study was not neglected; that which Saint Cesaire founded at Arles contained, at the commencement of the sixth century, two hundred nuns, for the most part occupied in copying books, sometimes religious books, sometimes, probably, even the works of the ancients. The metamorphosis of civil schools into ecclesiastical schools was complete. Let us see what was taught in them. We shall often find in them the names of sciences formerly professed in the civil schools, rhetoric, logic, grammar, geometry, astrology, &c.; but these were evidently no longer taught except in their relations to theology. This is the foundation of the instruction: all was turned into commentary of the Scriptures, historical, philosophical, allegorical, moral, commentary. They desired only to form priests; all studies, whatsoever their nature, were directed towards this result. Sometimes they went even further: they rejected the profane sciences themselves, whatever might be the use made of them." —F. Guizot, *History of Civilization in the French Revolution*, v. 2, *book* 4 and 16.

Ireland.—Scotland.—Schools of Iona.—Popular accounts represent St. Patrick as "founding at least a hundred monasteries, and even those who consider that the greater number of the Irish colleges were raised by his followers after his death, admit the fact of his having established an episcopal monastery and school at Armagh, where he and his clergy carried out the same rule of life that he had seen followed in the churches of Gaul. . . . The school, which formed a portion of the Cathedral establishment, soon rose in importance. Gildas taught here for some years before joining St. Cadoc at Llanarvan; and in process of time the number of students, both native and foreign, so increased that the university, as we may justly call it, was divided into three parts, one of which was devoted entirely to students of the Anglo-Saxon race. Grants for the support of the schools were made by the

Irish kings in the eighth century; and all through the troublous times of the ninth and tenth centuries, when Ireland was overrun by the Danes, and so many of her sanctuaries were given to the flames, the succession of divinity professors at Armagh remained unbroken, and has been carefully traced by Usher. We need not stop to determine how many other establishments similar to those of Armagh were really founded in the lifetime of St. Patrick. In any case the rapid extension of the monastic institute in Ireland, and the extraordinary ardour with which the Irish cœnobites applied themselves to the cultivation of letters remain undisputed facts. 'Within a century after the death of St. Patrick,' says Bishop Nicholson, 'the Irish seminaries had so increased that most parts of Europe sent their children to be educated here, and drew thence their bishops and teachers.' The whole country for miles round Leighlin was denominated the 'land of saints and scholars.' By the ninth century Armagh could boast of 7,000 students, and the schools of Cashel, Dindaleathglass, and Lismore vied with it in renown. This extraordinary multiplication of monastic seminaries and scholars may be explained partly by the constant immigration of British refugees who brought with them the learning and religious observances of their native cloisters, and partly by that sacred and irresistible impulse which animates a newly converted people to heroic acts of sacrifice. In Ireland the infant church was not, as elsewhere, watered with the blood of martyrs. . . . The bards, who were to be found in great numbers among the early converts of St. Patrick, had also a considerable share in directing the energies of their countrymen to intellectual labour. They formed the learned class, and on their conversion to Christianity were readily disposed to devote themselves to the culture of sacred letters. . . . It would be impossible, within the limits of a single chapter, to notice even the names of all the Irish seats of learning, or of their most celebrated teachers, every one of whom has his own legend in which sacred and poetic beauties are to be found blended together. One of the earliest monastic schools was that erected by Enda, prince of Orgiel, in that western island called from the wild flowers which even still cover its rocky soil, Aran-of-the-Flowers, a name it afterwards exchanged for that of Ara-na-naomb, or Aran-of-the-Saints. . . . A little later St. Finian founded his great school of Clonard, whence, says Usher, issued forth a stream of saints and doctors, like the Greek warriors from the wooden horse. . . . This desolate wilderness was soon peopled by his disciples, who are said to have numbered 3,000, of whom the twelve most eminent are often termed the Twelve Apostles of Ireland. . . . Among them none were more famous than St. Columba, St. Kieran, and St. Brendan. The first of these is known to every English reader as the founder of Iona; and Kieran, the carpenter's son, as he is called, is scarcely less renowned among his own countrymen. . . . It was in the year 563 that St. Columba, after founding the monasteries of Doire-Calgaich and Dair-magh in his native land, and incurring the enmity of one of the Irish kings, determined on crossing over into Scotland in order to preach the faith to the Northern Picts. Accompanied by twelve companions, he passed the Channel in a rude wicker boat covered with skins, and landed at Port-na Currachan, on a spot

now marked by a heap of huge conical stones. Conall, king of the Albanian Scots, granted him the island of I, Hi, or Ai, hitherto occupied by the Druids, and there he erected the monastery which, in time, became the mother of three hundred religious houses. . . . Iona, or I-Colum-kil, as it was called by the Irish, came to be looked on as the chief seat of learning, not only in Britain, but in the whole Western world. 'Thither, as from a nest,' says Odonellus, playing on the Latin name of the founder, 'these sacred doves took their flight to every quarter.' They studied the classics, the mechanical arts, law, history, and physic. They improved the arts of husbandry and horticulture, supplied the rude people whom they had undertaken to civilise with ploughshares and other utensils of labour, and taught them the use of the forge, in the mysteries of which every Irish monk was instructed from his boyhood. They transferred to their new homes all the learning of Armagh or Clonard. . . . In every college of Irish origin, by whomsoever they were founded or on whatever soil they flourished, we thus see study blended with the duties of the missionary and the cœnobite. They were religious houses, no doubt, in which the celebration of the Church office was often kept up without intermission by day and night; but they were also seminaries of learning, wherein sacred and profane studies were cultivated with equal success. Not only their own monasteries but those of every European country were enriched with their manuscripts, and the researches of modern biblioplists are continually disinterring from German or Italian libraries a Horace, or an Ovid, or a Sacred Codex whose Irish gloss betrays the hand which traced its delicate letters."—A. T. Drane, *Christian Schools and Scholars*, ch. 2.

Charlemagne.—"If there ever was a man who by his mere natural endowments soared above other men, it was Charlemagne. His life, like his stature, was colossal. Time never seemed wanting to him for anything that he wished to accomplish, and during his ten years campaign against the Saxons and Lombards, he contrived to get leisure enough to study grammar, and render himself tolerably proficient as a Latin writer in prose and verse. He found his tutors in the cities that he conquered. When he became master of Pisa, he gained the services of Peter of Pisa, whom he set over the Palatine school, which had existed even under the Merovingian kings, though as yet it was far from enjoying the fame to which it was afterwards raised by the teaching of Alcuin. He possessed the art of turning enemies into friends, and thus drew to his court the famous historian, Paul Warnefrid, deacon of the Church of Rome, who had previously acted as secretary to Didier, king of the Lombards. . . . Another Italian scholar, St. Paulinus, of Aquileja, was coaxed into the service of the Frankish sovereign after his conquest of Friuli; I will not say that he was bought, but he was certainly paid for by a large grant of confiscated territory made over by diploma to 'the Venerable Paulinus, master of the art of grammar.' But none of these learned personages were destined to take so large a part in that revival of learning which made the glory of Charlemagne's reign, as our own countryman Alcuin. It was in 781, on occasion of the king's second visit to Italy, that the meeting took place at Parma, the result of which was to fix the

English scholar at the Frankish court. Having obtained the consent of his own bishop and sovereign to this arrangement, Alcuin came over to France in 782, bringing with him several of the best scholars of York, among whom were Wizo, Fredegis, and Sigulf. Charlemagne received him with joy, and assigned him three abbeys for the maintenance of himself and his disciples, those namely, of Ferrières, St. Lupus of Troyes, and St. Josse in Ponthieu. From this time Alcuin held the first place in the literary society that surrounded the Frankish sovereign, and filled an office the duties of which were as vast as they were various. Three great works at once claimed his attention, the correction of the liturgical books, the direction of the court academy, and the establishment of other public schools throughout the empire. . . . But it was as head of the Palatine school that Alcuin's influence was chiefly to be felt in the restoration of letters. Charlemagne presented himself as his first pupil, together with the three princes, Pepin, Charles, and Louis, his sister Gisla and his daughter Richtrude, his councillors Adalard and Angilbert, and Eginhard his secretary. Such illustrious scholars soon found plenty to imitate their example, and Alcuin saw himself called on to lecture daily to a goodly crowd of bishops, nobles, and courtiers. The king wished to transform his court into a new Athens preferable to that of ancient Greece, in so far as the doctrine of Christ is to be preferred to that of Plato. All the liberal arts were to be taught there, but in such a way as that each should bear reference to religion, for this was regarded as the final end of all learning. Grammar was studied in order better to understand the Holy Scriptures and to transcribe them more correctly; music, to which much attention was given, was chiefly confined to the ecclesiastical chant; and it was principally to explain the Fathers and refute errors contrary to the faith that rhetoric and dialectics were studied. 'In short,' says Crevier, 'the thought both of the king and of the scholar who laboured with him was to refer all things to religion, nothing being considered as truly useful which did not bear some relation to that end.' At first Alcuin allowed the study of the classic poets, and in his boyhood, as we know, he had been a greater reader of Virgil than of the Scriptures. . . . The authors whose study Charlemagne and Alcuin desired to promote, were not so much Virgil and Cicero, as St. Jerome and St. Augustine; and Charlemagne, in his excessive admiration of those Fathers, gave utterance to the wish that he had a dozen such men at his court. The 'City of God' was read at the royal table, and the questions addressed by the court students to their master turned rather on the obscurities of Holy Writ than the difficulties of prosody. In one thing, however, they betrayed a classic taste, and that was in their selection of names. The Royal Academicians all rejoiced in some literary soubriquet; Alcuin was Flaccus; Angilbert, Homer; but Charlemagne himself adopted the more scriptural appellation of David. The eagerness with which this extraordinary man applied himself to acquire learning for himself, and to extend it throughout his dominions, is truly admirable, when we remember the enormous labours in which he was constantly engaged."—A. T. Drane, *Christian Schools and Scholars*, ch. 5.—See, also, *SCHOOL OF THE PALACE, CHARLEMAGNE'S*.

England: King Alfred.—King Alfred "gathered round him at his own court the sons of his nobility to receive, in conjunction with his own children, a better education than their parents would be able or willing to give them in their own households. To this assemblage of pupils Asser has attached the name of school, and a violent controversy once distracted the literary world concerning the sense in which the word was to be understood, and whether it was not the beginning or origin of a learned institution still existing. In speaking of this subject, Asser has taken occasion to enumerate and describe the children who were born to Alfred from his wife Elswitha, daughter of Ethelred the 'Big,' alderman of the Gaini, and a noble of great wealth and influence in Mercia. 'The sons and daughters,' says Asser, 'which he had by his wife above mentioned, were Ethelfied the eldest, after whom came Edward, then Ethelgiva, then Ethelswitha, and Ethelwerd, besides those who died in their infancy, one of whom was Edmund. Ethelfied, when she arrived at a marriageable age, was united to Ethelred, earl of Mercia; Ethelgiva was dedicated to God, and submitted to the rules of a monastic life; Ethelwerd, the youngest, by the Divine counsels and admirable prudence of the king, was consigned to the schools of learning, where, with the children of almost all the nobility of the country, and many also who were not noble, he prospered under the diligent care of his teachers. Books in both languages, namely, in Latin and Saxon, were read in the school. They also learned to write; so that, before they were of an age to practise manly arts, namely hunting and such other pursuits as befit noblemen, they became studious and clever in the liberal arts. Edward and Ethelswitha were bred up in the king's court, and received great attention from their servants and nurses; nay, they continue to this day, with the love of all about them, and shew affability, and even gentleness, towards all, both foreigners and natives, and are in complete subjection to their father; nor, among their other studies which appertain to this life and are fit for noble youths, are they suffered to pass their time idly and unprofitably, without learning the liberal arts; for they have carefully learned the Psalms and Saxon books, especially the Saxon Poems, and are continually in the habit of making use of books.' The schools of learning, to which Asser alludes in this passage, as formed for the use of the king's children and the sons of his nobles, are again mentioned elsewhere by the same author, as 'the school which he had studiously collected together, consisting of many of the nobility of his own nation:' and in a third passage, Asser speaks of the 'sons of the nobility who were bred up in the royal household.' It is clear, then, from these expressions, that the king's exertions to spread learning among his nobles and to educate his own children, were of a most active and personal nature, unconnected with any institutions of a more public character: the school was kept in his own household, and not in a public seat of learning. We may perhaps adduce these expressions of Asser as militating against the notion, that an University or Public Seminary of Learning existed in the days of Alfred. Though it is most probable that the several monasteries, and other societies of monks and churchmen, would employ a portion of their idle time in teaching youth, and prosecuting their

own studies; yet there is no proof that an authorized seat of learning, such as the Universities of Oxford or Cambridge, existed in England, until many hundred years after the time of Alfred."—J. A. Giles, *Life and Times of Alfred the Great*, ch. 21.

Saracenic and Moorish learning.—"Even as early as the tenth century, persons having a taste for learning and for elegant amenities found their way into Spain from all adjoining countries; a practice in subsequent years still more indulged in, when it became illustrated by the brilliant success of Gilbert, who . . . passed from the Infidel University of Cordova to the papacy of Rome. The khalifs of the West carried out the precepts of Ali, the fourth successor of Mohammed, in the patronage of literature. They established libraries in all their chief towns; it is said that not fewer than seventy were in existence. To every mosque was attached a public school, in which the children of the poor were taught to read and write, and instructed in the precepts of the Koran. For those in easier circumstances there were academies, usually arranged in twenty-five or thirty apartments, each calculated for accommodating four students; the academy being presided over by a rector. In Cordova, Granada, and other great cities, there were universities frequently under the superintendence of Jews; the Mohammedan maxim being that the real learning of a man is of more public importance than any particular religious opinions he may entertain. In this they followed the example of the Asiatic khalif, Haroun Alraschid, who actually conferred the superintendence of his schools on John Masuë, a Nestorian Christian. The Mohammedan liberality was in striking contrast with the intolerance of Europe. . . . In the universities some of the professors of polite literature gave lectures on Arabic classical works; others taught rhetoric or composition, or mathematics, or astronomy. From these institutions many of the practices observed in our colleges were derived. They held Commencements, at which poems were read and orations delivered in presence of the public. They had also, in addition to these schools of general learning, professional ones, particularly for medicine. With a pride perhaps not altogether inexcusable, the Arabians boasted of their language as being the most perfect spoken by man. . . . It is not then surprising that, in the Arabian schools, great attention was paid to the study of language, and that so many celebrated grammarians were produced. By these scholars, dictionaries, similar to those now in use, were composed; their copiousness is indicated by the circumstance that one of them consisted of sixty volumes, the definition of each word being illustrated or sustained by quotations from Arab authors of acknowledged repute. They had also lexicons of Greek, Latin, Hebrew; and cyclopedias such as the Historical Dictionary of Sciences of Mohammed Ibn Abdallah, of Granada."—J. W. Draper, *Hist. of the Intellectual Development of Europe*, v. 2, ch. 2.—"The Saracenic kings formed libraries of unparalleled size and number. That of Hakem amounted to 600,000 volumes, of which 44 were employed in the mere catalogue. Upwards of 70 public libraries were established in his dominions. 100,000 volumes were numbered in the library of Cairo, and were freely lent to the studious citizen. The taste of the sovereign communicated itself to the subject, and a private

doctor declared that his books were sufficient to load 400 camels. Nor were the Saracens less attentive to the foundation of schools and colleges. Eighty of the latter institutions adorned Cordova in the reign of Hakem; in the fifteenth century fifty were scattered over the city and plain of Granada. 200,000 dinars (about £100,000 sterling) were expended on the foundation of a single college at Baghdad. It was endowed with an annual revenue of 15,000 dinars, and was attended by 6,000 students. The princes of the house of Omeya honoured the Spanish academies by their presence and studies, and competed, not without success, for the prizes of learning. Numerous schools for the purpose of elementary instruction were founded by a long series of monarchs. . . . In this manner the Arabians, within two centuries, constructed an apparatus for mental improvement which hitherto had not been equalled save in Alexandria, and to which the Church, after ruling the intellect of Europe for more than five hundred years, could offer no parallel."—*The Intellectual Revival of the Middle Ages* (Westminster Review, January, 1876).

Scholasticism. — Schoolmen.—In the later times of the Roman empire, "the loss of the dignity of political freedom, the want of the cheerfulness of advancing prosperity, and the substitution of the less philosophical structure of the Latin language for the delicate intellectual mechanism of the Greek, fixed and augmented the prevalent feebleness and barrenness of intellect. Men forgot, or feared, to consult nature, to seek for new truths, to do what the great discoverers of other times had done; they were content to consult libraries, to study and defend old opinions, to talk of what great geniuses had said. They sought their philosophy in accredited treatises, and dared not question such doctrines as they there found. . . . In the mean time the Christian religion had become the leading subject of men's thoughts; and divines had put forward its claims to be, not merely the guide of men's lives, and the means of reconciling them to their heavenly Master, but also to be a Philosophy in the widest sense in which the term had been used;—a consistent speculative view of man's condition and nature, and of the world in which he is placed. . . . It was held, without any regulating principle, that the philosophy which had been bequeathed to the world by the great geniuses of heathen antiquity, and the philosophy which was deduced from, and implied by, the Revelations made by God to man, must be identical; and, therefore, that Theology is the only true philosophy. . . . This view was confirmed by the opinion which prevailed, concerning the nature of philosophical truth; a view supported by the theory of Plato, the practice of Aristotle, and the general propensities of the human mind: I mean the opinion that all science may be obtained by the use of reasoning alone;—that by analyzing and combining the notions which common language brings before us, we may learn all that we can know. Thus Logic came to include the whole of Science; and accordingly this Abelard expressly maintained. . . . Thus a Universal Science was established, with the authority of a Religious Creed. Its universality rested on erroneous views of the relation of words and truth; its pretensions as a science were admitted by the servile temper of men's intellects; and its religious authority was assigned it, by making all

truth part of religion. And as Religion claimed assent within her own jurisdiction under the most solemn and imperative sanctions, Philosophy shared in her imperial power, and dissent from their doctrines was no longer blameless or allowable. Error became wicked, dissent became heresy; to reject the received human doctrines, was nearly the same as to doubt the Divine declarations. The Scholastic Philosophy claimed the assent of all believers. The external form, the details, and the text of this Philosophy, were taken, in a great measure, from Aristotle; though, in the spirit, the general notions, and the style of interpretation, Plato and the Platonists had no inconsiderable share. . . . It does not belong to our purpose to consider either the theological or the metaphysical doctrines which form so large a portion of the treatises of the schoolmen. Perhaps it may hereafter appear, that some light is thrown on some of the questions which have occupied metaphysicians in all ages, by that examination of the history of the Progressive Sciences in which we are now engaged; but till we are able to analyze the leading controversies of this kind, it would be of little service to speak of them in detail. It may be noticed, however, that many of the most prominent of them refer to the great question, 'What is the relation between actual things and general terms?' Perhaps in modern times, the actual things would be more commonly taken as the point to start from; and men would begin by considering how classes and universals are obtained from individuals. But the schoolmen, founding their speculations on the received modes of considering such subjects, to which both Aristotle and Plato had contributed, travelled in the opposite direction, and endeavored to discover how individuals were deduced from genera and species;—what was 'the Principle of Individuation.' This was variously stated by different reasoners. Thus Bonaventura solves the difficulty by the aid of the Aristotelian distinction of Matter and Form. The individual derives from the Form the property of being something, and from the Matter the property of being that particular thing. Duns Scotus, the great adversary of Thomas Aquinas in theology, placed the principle of Individuation in 'a certain determining positive entity,' which his school called *Hæcceity* or 'thisness.' 'Thus an individual man is Peter, because his humanity is combined with *Petreity*.' The force of abstract terms is a curious question, and some remarkable experiments in their use had been made by the Latin Aristotelians before this time. In the same way in which we talk of the quantity and quality of a thing, they spoke of its 'quiddity.' We may consider the reign of mere disputation as fully established at the time of which we are now speaking [the Middle Ages]; and the only kind of philosophy henceforth studied was one in which no sound physical science had or could have a place."—W. Whewell, *Hist. of the Inductive Sciences*, bk. 4, ch. 4 (v. 1).—"Scholasticism was philosophy in the service of established and accepted theological doctrines. . . . More particularly, Scholasticism was the reproduction of ancient philosophy under the control of ecclesiastical doctrine. . . . The name of Scholastics (doctores scholastici) which was given to the teachers of the septem liberales artes [seven liberal arts] (grammar, dialectic, rhetoric, in the Trivium; arithmetic, geometry, music and astron-

any, in the Quadrivium), or at least some of them, in the Cloister Schools founded by Charlemagne, as also to teachers of theology, was afterwards given to all who occupied themselves with the sciences, and especially with philosophy. . . . Johannes Scotus, or Erigena [ninth century] is the earliest noteworthy philosopher of the Scholastic period. He was of Scottish nationality, but was probably born and brought up in Ireland. At the call of Charles the Bald he emigrated to France."—F. Ueberweg, *Hist. of Philosophy*, v. 1, pp. 355–484.—"Scholasticism, at the last, from the prodigious mental activity which it kept up, became a tacit universal insurrection against authority: it was the swelling of the ocean before the storm. . . . It was a sign of a great awakening of the human mind when theologians thought it both their duty and their privilege to philosophize. There was a vast waste of intellectual labor, but still it was intellectual labor, and, as we shall see, it was not in the end unfruitful."—C. J. Stillé, *Studies in Medieval History*, ch. 13.—"Scholasticism had its hour of glory, its erudite doctors, its eloquent professors, chief among whom was Abelard (1079–1142). . . . At a time when printing did not exist, when manuscript copies were rare, a teacher who combined knowledge with the gift of speech was a phenomenon of incomparable interest, and students flocked from all parts of Europe to take advantage of his lectures. Abelard is the most brilliant representative of the scholastic pedagogy, with an original and personal tendency towards the emancipation of the mind. 'It is ridiculous,' he said, 'to preach to others what we can neither make them understand nor understand ourselves.' With more boldness than Saint Anselm, he applied dialectics to theology, and attempted to reason out the grounds of his faith. The seven liberal arts constituted what may be called the secondary instruction of the Middle Age, such as was given in the claustral or conventual schools, and later, in the universities. The liberal arts were distributed into two courses of study, known as the 'trivium' and the 'quadrivium.' The 'trivium' comprised grammar (Latin grammar, of course), dialectics, or logic, and rhetoric; and the 'quadrivium,' music, arithmetic, geometry, and astronomy. It is important to note the fact that this programme contains only abstract and formal studies,—no real and concrete studies. The sciences which teach us to know man and the world, such as history, ethics, the physical and natural sciences, were omitted and unknown, save perhaps in a few convents of the Benedictines. Nothing which can truly educate man, and develop his faculties as a whole, enlists the attention of the Middle Age. From a course of study thus limited there might come skillful reasoners and men formidable in argument, but never fully developed men. The methods employed in the ecclesiastical schools of the Middle Age were in accord with the spirit of the times, when men were not concerned about liberty and intellectual freedom; and when they thought more about the teaching of dogmas than about the training of the intelligence. The teachers recited or read their lectures, and the pupils learned by heart. The discipline was harsh. Corrupt human nature was distrusted. In 1363, pupils were forbidden the use of benches and chairs, on the pretext that such high seats were an encouragement to pride. For securing

obedience, corporal chastisements were used and abused. The rod is in fashion in the fifteenth as it was in the fourteenth century. 'There is no other difference,' says an historian, 'except that the rods in the fifteenth century are twice as long as those in the fourteenth.'"—G. Compayré, *The Hist. of Pedagogy*; trans. by W. H. Payne, ch. 4.

Universities, Their Rise.—Abelard.—"Up to the end of the eleventh century the instruction was, speaking generally, and allowing for transitional periods of revival, and for a few exceptional schools, a shrunken survival of the old 'trivium et quadrivium.' The lessons, when not dictated and learnt by heart from notes, were got up from bald epitomes. All that was taught, moreover, was taught solely with a view to 'pious uses.' Criticism did not exist; the free spirit of speculation could not, of course, exist. . . . As we approach the period which saw the birth of those institutions known as *Studia Publica* or *Generalia*, and ere long to be known as 'universities,' we have to extend our vision and recognize the circumstances of the time, and those changes in the social condition of Europe which made great central schools possible—schools to be frequented not merely by the young ecclesiastic, but by laymen. Among other causes which led to the diffusion of a demand for education among the laity, was, I think, the institution or reorganization of municipalities. It was about the end of the eleventh century that the civic Communes (*Communia*) began to seek and obtain, from royal and other authorities, charters of incorporation constituting their internal government and conferring certain freedoms and privileges as against the encroachment of lay and ecclesiastical feudal barons. . . . About the same time, and somewhat prior to this, trade guilds had been formed in many cities for mutual protection, the advancement of commerce, and the internal regulation of the various crafts. There immediately followed a desire for schools in the more important commercial towns. In Italy such schools arose in Bologna, Milan, Brescia, and Florence; and in Germany they arose in Lübeck, Hamburg, Breslau, Nordhausen, Stettin, Leipsic, and Nürnberg. The distinctive characteristic of these city schools was, that they do not seem to have been under the direct control of the Church, or to have been always taught by priests; further, that the native tongue (German or Italian, as the case might be) was taught. Reading, writing, and a little arithmetic seem to have formed the staple of the instruction. The custom of dictating, writing down, and then learning by heart what was written—universal in the schools of the preceding centuries—was, of course, still followed in these burgh schools. This custom was almost inevitable. . . . The increased communication with Africa and the East through the Crusades had introduced men to a standard of learning among the Arabs, unknown in Europe. Outside the school, the order of chivalry had introduced a new and higher ethical spirit than had been known in the previous centuries. Civic communities and trade guilds were forming themselves and seeking charters of incorporation. Above all, the Crusades, by stimulating the ardour and exciting the intellects of men, had unsettled old convention by bringing men of all ranks within the sacred circle of a common enthusiasm, and into contact with foreign civilizations. The desire for a higher education,

and the impulse to more profound investigation, that characterized the beginning and course of the twelfth century, was thus only a part of a widespread movement, political and moral. . . . While the Romano-Hellenic schools had long disappeared, there still existed, in many towns, episcopal schools of a high class, many of which might be regarded as continuations of the old imperial provincial institutions. . . . In Bologna and Paris, Rheims and Naples, it was so. The arts curriculum professed in these centres was, for the time and state of knowledge, good. These schools, indeed, had never quite lost the fresh impulse given by Charlemagne and his successors. . . . According to my view of educational history, the great 'studia publica' or 'generalia' arose out of them. They were themselves, in a narrow sense, already 'studia publica.' . . . Looking, first, to the germ out of which the universities grew, I think we must say that the universities may be regarded as a natural development of the cathedral and monastery schools; but if we seek for an external motive force urging men to undertake the more profound and independent study of the liberal arts, we can find it only in the Saracenic schools of Bagdad, Babylon, Alexandria, and Cordova. . . . To fix precisely the date of the rise of the first specialized schools or universities is impossible, for the simple reason that they were not founded. . . . The simplest account of the new university origins is the most correct. It would appear that certain active-minded men of marked eminence began to give instruction in medical subjects at Salerno, and in law at Bologna, in a spirit and manner not previously attempted, to youths who had left the monastery and cathedral schools, and who desired to equip themselves for professional life. Pupils flocked to them; and the more able of these students, finding that there was a public demand for this higher specialized instruction, remained at headquarters, and themselves became teachers or doctors. The Church did not found universities any more than it founded the order of chivalry. They were founded by a concurrence (not wholly fortuitous) of able men who had something they wished to teach, and of youths who desired to learn. None the less were the acquiescence and protection of Church and State necessary in those days for the fostering of these infant seminaries. . . . Of the three great schools which we have named, there is sufficient ground for believing that the first to reach such a development as to entitle it to the name of a studium generale or university was the 'Schola Salernitana,' although it never was a university, technically speaking."—S. S. Laurie, *Rise and Early Constitution of Universities*, lect. 6-7.—"Ideas, till this time scattered, or watched over in the various ecclesiastical schools, began to converge to a common centre. The great name of University was recognised in the capital of France, at the moment that the French tongue had become almost universal. The conquests of the Normans, and the first crusade, had spread its powerfully philosophic idiom in every direction, to England, to Sicily, and to Jerusalem. This circumstance alone invested France, central France, Paris, with an immense attractive power. By degrees, Parisian French became a proverb. Feudalism had found its political centre in the royal city; and this city was about to become the capital of human thought. The beginner of this revolution was not a priest, but a

handsome young man of brilliant talents, amiable and of noble family. None wrote love verses, like his, in the vulgar tongue; he sang them, too. Besides, his erudition was extraordinary for that day. He alone, of his time, knew both Greek and Hebrew. May be, he had studied at the Jewish schools (there were many in the South), or under the rabbins of Troyes, Vitry, or of Orléans. There were then in Paris two leading schools: the old Episcopal school of the parvis Notre Dame, and that of St. Geneviève, on the hill, where shone William of Champeaux. Abelard joined his pupils, submitted to him his doubts, puzzled him, laughed at him, and closed his mouth. He would have served Anselm of Laon the same, had not the professor, being a bishop, expelled him from his diocese. In this fashion this knight-errant of logic went on, unhorsing the most celebrated champions. He himself declared that he had only renounced tilt and tourney through his passion for intellectual combats. Henceforward, victorious and without a rival, he taught at Paris and Melun, the residence of Louis-le-Gros, and the lords flocked to hear him; anxious to encourage one of themselves, who had discomfited the priests on their own ground, and had silenced the ablest clerks. Abelard's wonderful success is easily explained. All the lore and learning which had been smothered under the heavy, dogmatical forms of clerical instruction, and hidden in the rude Latin of the middle age, suddenly appeared arrayed in the simple elegance of antiquity, so that men seemed for the first time to hear and recognise a human voice. The daring youth simplified and explained everything; presenting philosophy in a familiar form, and bringing it home to men's bosoms. He hardly suffered the obscure or supernatural to rest on the hardest mysteries of faith. It seemed as if till then the Church had lisped and stammered; while Abelard spoke. All was made smooth and easy. He treated religion courteously and handled her gently, but she melted away in his hands. Nothing embarrassed the fluent speaker: he reduced religion to philosophy, and morality to humanity. 'Crime,' he said, 'consists not in the act, but in the intention.' It followed, that there was no such thing as sins of habit or of ignorance—'They who crucified Jesus, not knowing him to have been the Saviour, were guilty of no sin.' What is original sin?—'Less a sin, than a punishment.' But then, wherefore the redemption and the passion, if there was no sin?—'It was an act of pure love. God desired to substitute the law of love for that of fear.'—J. Michelet, *History of France*, v. 1, bk. 4, ch. 4.—"It is difficult, by a mere perusal of Abelard's works, to understand the effect he produced upon his hearers by the force of his argumentation, whether studied or improvised, and by the ardor and animation of his eloquence, and the grace and attractiveness of his person. But the testimony of his contemporaries is unanimous; even his adversaries themselves render justice to his high oratorical qualities. No one ever reasoned with more subtlety, or handled the dialectic tool with more address; and assuredly, something of these qualities is to be found in the writings he has left us. But the intense life, the enthusiastic ardor which enlivened his discourses, the beauty of his face, and the charm of his voice cannot be imparted by cold manuscripts. Héloïse, whose name is inseparably linked with

that of her unfortunate husband, and whom Charles de Rémusat does not hesitate to call 'the first of women'; who, in any case, was a superior person of her time; Héloïse, who loved Abelard with 'an immoderate love,' and who, under the veil of a 'religieuse' and throughout the practice of devotional duties, remained faithful to him until death; Héloïse said to him in her famous letter of 1136: 'Thou hast two things especially which could instantly win thee the hearts of all women: the charm thou knowest how to impart to thy voice in speaking and singing.' External gifts combined with intellectual qualities to make of Abelard an incomparable seducer of minds and hearts. Add to this an astonishing memory, a knowledge as profound as was compatible with the resources of his time, and a vast erudition which caused his contemporaries to consider him a master of universal knowledge. . . . How can one be astonished that with such qualities Abelard gained an extraordinary ascendancy over his age; that, having become the intellectual ruler and, as it were, the dictator of the thought of the twelfth century, he should have succeeded in attracting to his chair and in retaining around it thousands of young men; the first germ of those assemblages of students who were to constitute the universities several years later? . . . It is not alone by the outward success of his scholastic apostolate that Abelard merits consideration as the precursor of the modern spirit and the promoter of the foundation of the universities; it is also by his doctrine, or at least by his method. . . . No one claims that Abelard was the first who, in the Middle Ages, had introduced dialectics into theology, reason into authority. In the ninth century, Scotus Erigena had already said: 'Authority is derived from reason.' Scholasticism, which is nothing but logic enlightening theology, an effort of reason to demonstrate dogma, had begun before Abelard; but it was he who gave movement and life to the method by lending it his power and his renown."—G. Compayré, *Abelard*, pt. 1, ch. 2-3.

Latin Language.—"Greek was an unknown tongue: only a very few of the Latin classics received a perfunctory attention: Boethius was preferred to Cicero, and the Moral Sentences ascribed to Cato to either. Rules couched in barbarous Latin verse were committed to memory. Aristotle was known only in incorrect Latin translations, which many of the taught, and some of the teachers probably, supposed to be the originals. Matters were not mended when the student, having passed through the preliminary course of arts, advanced to the study of the sciences. Theology meant an acquaintance with the 'Sentences' of Peter Lombard, or, in other cases, with the 'Summa' of Thomas Aquinas; in medicine, Galen was an authority from which there was no appeal. On every side the student was fenced round by traditions and prejudices, through which it was impossible to break. In truth, he had no means of knowing that there was a wider and fairer world beyond. Till the classical revival came, every decade made the yoke of prescription heavier, and each generation of students, therefore, a feeblér copy of the last."—C. Beard, *Martin Luther and the Reformation*, ch. 3.—"What at first had been everywhere a Greek became in Western Europe a Latin religion. The discipline of Rome maintained the body of doctrine which the thought of

Greece had defined. A new Latin version, superseding alike the venerable Greek translation of the Old Testament and the original words of Evangelists and Apostles, became the received text of Holy Scripture. The Latin Fathers acquired an authority scarcely less binding. The ritual, lessons, and hymns of the Church were Latin. Ecclesiastics transacted the business of civil departments requiring education. Libraries were armories of the Church: grammar was part of her drill. The humblest scholar was enlisted in her service: she recruited her ranks by founding Latin schools. 'Education in the rudiments of Latin,' says Hallam, 'was imparted to a greater number of individuals than at present;' and, as they had more use for it than at present, it was longer retained. If a boy of humble birth had a taste for letters, or if a boy of high birth had a distaste for arms, the first step was to learn Latin. His foot was then on the ladder. He might rise by the good offices of his family to a bishopric, or to the papacy itself by merit and the grace of God. Latin enabled a Greek from Tarsus (Theodore) to become the founder of learning in the English church; and a Yorkshireman (Alcuin) to organize the schools of Charlemagne. Without Latin, our English Winfrid (St. Boniface) could not have been apostle of Germany and reformer of the Frankish Church; or the German Albert, master at Paris of Thomas Aquinas; or Nicholas Breakspeare, Pope of Rome. With it, Western Christendom was one vast field of labor: calls for self-sacrifice, or offers of promotion, might come from north or south, from east or west. Thus in the Middle Ages Latin was made the groundwork of education; not for the beauty of its classical literature, nor because the study of a dead language was the best mental gymnastic, or the only means of acquiring a masterly freedom in the use of living tongues, but because it was the language of educated men throughout Western Europe, employed for public business, literature, philosophy, and science; above all, in God's providence, essential to the unity, and therefore enforced by the authority of, the Western Church."—C. S. Parker, *Essay on the History of Classical Education* (quoted in Dr. Henry Barnard's *Letters, Essays and Thoughts on Studies and Conduct*, p. 467).

France.—"The countries of western Europe, leavened, all of them, by the one spirit of the feudal and catholic Middle Age, formed in some sense one community, and were more associated than they have been since the feudal and catholic unity of the Middle Age has disappeared and given place to the divided and various life of modern Europe. In the mediæval community France held the first place. It is now well known that to place in the 15th century the revival of intellectual life and the re-establishment of civilisation, and to treat the period between the 5th century, when ancient civilisation was ruined by the barbarians, and the 15th, when the life and intellect of this civilisation reappeared and transformed the world, as one chaos, is a mistake. The chaos ends about the 10th century; in the 11th there truly comes the first re-establishment of civilisation, the first revival of intellectual life; the principal centre of this revival is France, its chief monuments of literature are in the French language, its chief monuments of art are the French cathedrals. This revival fills the 12th and

13th centuries with its activity and with its works; all this time France has the lead; in the 14th century the lead passes to Italy; but now comes the commencement of a wholly new period, the period of the Renaissance properly so called, the beginning of modern European life, the ceasing of the life of the feudal and catholic Middle Age. The anterior and less glorious Renaissance, the Renaissance within the limits of the Middle Age itself, a revival which came to a stop and could not successfully develop itself, but which has yet left profound traces in our spirit and our literature,—this revival belongs chiefly to France. France, then, may well serve as a typical country wherein to trace the mediæval growth of intellect and learning; above all she may so stand for us, whose connection with her in the Middle Age, owing to our Norman kings and the currency of her language among our cultivated class, was so peculiarly close; so close that the literary and intellectual development of the two countries at that time intermingles, and no important event can happen in that of the one without straightway affecting and interesting that of the other. . . . With the hostility of the long French Wars of Edward the Third comes the estrangement, never afterwards diminishing but always increasing.”—M. Arnold, *Schools and Universities on the Continent*, ch. 1.—**University of Paris.**—“The name of Abelard recalls the European celebrity and immense intellectual ferment of this school [of Paris] in the 12th century. But it was in the first year of the following century, the 13th, that it received a charter from Philip Augustus, and thenceforth the name of University of Paris takes the place of that of School of Paris. Forty-nine years later was founded University College, Oxford, the oldest college of the oldest English University. Four nations composed the University of Paris,—the nation of France, the nation of Picardy, the nation of Normandy, and (signal mark of the close intercourse which then existed between France and us!) the nation of England. The four nations united formed the faculty of arts. The faculty of theology was created in 1257, that of law in 1271, that of medicine in 1274. Theology, law, and medicine had each their Dean; arts had four Procurators, one for each of the four nations composing this faculty. Arts elected the rector of the University, and had possession of the University chest and archives. The pre-eminence of the Faculty of Arts indicates, as indeed does the very development of the University, an idea, gradually strengthening itself, of a lay instruction to be no longer absorbed in theology, but separable from it. The growth of a lay and modern spirit in society, the preponderance of the crown over the papacy, of the civil over the ecclesiastical power, is the great feature of French history in the 14th century, and to this century belongs the highest development of the University. . . . The importance of the University in the 13th and 14th centuries was extraordinary. Men’s minds were possessed with a wonderful zeal for knowledge, or what was then thought knowledge, and the University of Paris was the great fount from which this knowledge issued. The University and those depending on it made at this time, it is said, actually a third of the population of Paris; when the University went on a solemn occasion in procession to Saint Denis, the head of the procession, it is said, had reached St. Denis before the end of it

had left its starting place in Paris. It had immunities from taxation, it had jurisdiction of its own, and its members claimed to be exempt from that of the provost of Paris; the kings of France strongly favoured the University, and leaned to its side when the municipal and academical authorities were in conflict; if at any time the University thought itself seriously aggrieved, it had recourse to a measure which threw Paris into dismay,—it shut up its schools and suspended its lectures. In a body of this kind the discipline could not be strict, and the colleges were created to supply centres of discipline which the University in itself,—an apparatus merely of teachers and lecture-rooms,—did not provide. The 14th century is the time when, one after another, with wonderful rapidity, the French colleges appeared. Navarre, Montaigu, Harcourt, names so familiar in the school annals of France, date from the first quarter of the 14th century. The College of Navarre was founded by the queen of Philip the Fair, in 1304; the College of Montaigu, where Erasmus, Rabelais, and Ignatius Loyola were in their time students, was founded in 1314 by two members of the family of Montaigu, one of them Archbishop of Rouen. The majority of these colleges were founded by magnates of the church, and designed to maintain a certain number of bursars, or scholars, during their university course. . . . Along with the University of Paris there existed in France, in the 14th century, the Universities of Orleans, Angers, Toulouse, and Montpellier. Orleans was the great French school for the study of the civil law. . . . The civil law was studiously kept away from the University of Paris, for fear it should drive out other studies, and especially the study of theology; so late as the year 1679 there was no chair of Roman or even of French law in the University of Paris. The strength of this University was concentrated on theology and arts, and its celebrity arose from the multitude of students which in these branches of instruction it attracted.”—M. Arnold, *Schools and Universities on the Continent*, ch. 1.—**The Sorbonne.**—“The University of Paris acquired the name of ‘the Sorbonne’ “from Robert of Sorbon, alic chaplain of St. Louis, who established one of the 63 colleges of the University. . . . The name of Sorbonne was first applied to the theological faculty only; but at length the whole University received this designation.”—J. Alzog, *Manual of Universal Church History*, v. 3, p. 24, *foot note*.—**The Nations.**—“The precise date of the organization at Paris of the four Nations which maintained themselves there until the latest days of the university escapes the most minute research. Neither for the Nations nor for the Faculties was there any sudden blossoming, but rather a slow evolution, an insensible preparation for a definite condition. Already at the close of the twelfth century there is mention in contemporary documents of the various provinces of the school of Paris. The Nations are mentioned in the bulls of Gregory IX. (1231) and of Innocent IV. (1245). In 1245, they already elect their attendants, the beadles. In 1249, the existence of the four Nations—France, Picardy, Normandy, and England—is proved by their quarrels over the election of a rector. . . . Until the definitive constitution of the Faculties, that is, until 1270 or 1280, the four Nations included the totality of students and masters. After the

formation of the Faculties, the four Nations comprised only the members of the Faculty of Arts and those students of other Faculties who had not yet obtained the grade of Bachelor of Arts. The three superior Faculties, Theology, Medicine, and Law, had nothing in common thenceforward with the Nations. . . . At Bologna, as at Paris, the Nations were constituted in the early years of the thirteenth century, but under a slightly different form. There the students were grouped in two distinct associations, the Ultramontanes and the Citramontanes, the foreigners and the Italians, who formed two universities, the Transalpine and the Cisalpine, each with its chiefs, who were not styled procurators but counsellors; the first was composed of eighteen Nations and the second of seventeen. At Padua twenty-two Nations were enumerated. Montpellier had only three in 1339,—the Catalans, the Burgundians, the Provençals; each sub-divided, however, into numerous groups. Orleans had ten: France, Germany, Lorraine, Burgundy, Champagne, Picardy, Normandy, Touraine, Guyenne, and Scotland; Poitiers had four: France, Aquitaine, Touraine, and Berry; Prague had four also, in imitation of Paris; Lerida had twelve, in imitation of Bologna, etc. But whether more or less numerous, and whatever their special organization, the Nations in all the universities bore witness to that need of association which is one of the characteristics of the Middle Ages. . . . One of the consequences of their organization was to prevent the blending and fusion of races, and to maintain the distinction of provinces and nationalities among the pupils of the same university.”—G. Compayré, *Abelard*, pt. 2, ch. 2.

Italy: Revived Study of Roman Law.—“It is known that Justinian established in Rome a school of law, similar to those of Constantinople and Berytus. When Rome ceased to be subject to Byzantine rule, this law-school seems to have been transferred to Ravenna, where it continued to keep alive the knowledge of the Justinian system. That system continued to be known and used, from century to century, in a tradition never wholly interrupted, especially in the free cities of Northern Italy. It seems even to have penetrated beyond Italy into Southern France. But it was destined to have, at the beginning of the twelfth century, a very extraordinary revival. This revival was part of a general movement of the European mind which makes its appearance at that epoch. The darkness which settled down on the world, at the time of the barbarian invasions, had its midnight in the ninth and tenth centuries. In the eleventh, signs of progress and improvement begin to show themselves, becoming more distinct towards its close, when the period of the Crusades was opening upon Europe. Just at this time we find a famous school of law established in Bologna, and frequented by multitudes of pupils, not only from all parts of Italy, but from Germany, France, and other countries. The basis of all its instruction was the *Corpus Juris Civilis* [see *CORPUS JURIS CIVILIS*]. Its teachers, who constitute a series of distinguished jurists extending over a century and a half, devoted themselves to the work of expounding the text and elucidating the principles of the *Corpus Juris*, and especially the *Digest*. From the form in which they recorded and handed down the results of their studies, they have obtained the

name of glossators. On their copies of the *Corpus Juris* they were accustomed to write glosses, i. e., brief marginal explanations and remarks. These glosses came at length to be an immense literature. . . . Here, then, in this school of the glossators, at Bologna, in the twelfth and thirteenth centuries, the awakened mind of Europe was brought to recognize the value of the *Corpus Juris*, the almost inexhaustible treasure of juristic principles, precepts, conceptions, reasonings, stored up in it.”—Jas. Hadley, *Introd. to Roman Law*, lect. 2.—**University of Bologna.**—“In the twelfth century the law school of the University of Bologna eclipsed all others in Europe. The two great branches of legal study in the middle ages, the Roman law and the canon law, began in the teaching of Irnerius and Gratian at Bologna in the first half of the twelfth century. At the beginning of this century the name of university first replaces that of school; and it is said that the great university degree, that of doctor, was first instituted at Bologna, and that the ceremony for conferring it was devised there. From Bologna the degree and its ceremonial travelled to Paris. A bull of Pope Honorius, in 1220, says that the study of ‘bonæ literæ’ had at that time made the city of Bologna famous throughout the world. Twelve thousand students from all parts of Europe are said to have been congregated there at once. The different nations had their colleges, and of colleges at Bologna there were fourteen. These were founded and endowed by the liberality of private persons; the university professors, the source of attraction to this multitude of students, were paid by the municipality, who found their reward in the fame, business, and importance brought to their town by the university. The municipalities of the great cities of northern and central Italy were not slow in following the example of Bologna; in the thirteenth century Padua, Modena, Piacenza, Parma, Ferrara, had each its university. Frederick II. founded that of Naples in 1224; in the fourteenth century were added those of Pavia, Perugia, Pisa, and Turin. Colleges of examiners, or, as we should say, boards, were created by Papal bull to examine in theology, and by imperial decree to examine in law and medicine. It was in these studies of law and medicine that the Italian universities were chiefly distinguished.”—M. Arnold, *Schools and Universities on the Continent*, ch. 9.—“The Bologna school of jurisprudence was several times threatened with total extinction. In the repeated difficulties with the city the students would march out of the town, bound by a solemn oath not to return; and if a compromise was to be effected, a papal dispensation from that oath must first be obtained. Generally on such occasions, the privileges of the university were reaffirmed and often enlarged. In other cases, a quarrel between the pope and the city, and the ban placed over the latter, obliged the students to leave; and then the city often planned and furthered the removal of the university. King Frederic II., in 1226, during the war against Bologna, dissolved the school of jurisprudence, which seems to have been not at all affected thereby, and he formally recalled that ordinance in the following year. Originally the only school in Bologna was the school of jurisprudence, and in connection with it alone a university could be formed. . . . Subsequently eminent teachers of medicine and the liberal arts appeared, and their

pupils, too, sought to form a university and to choose their own rector. As late as 1295 this innovation was disputed by the jurists and interdicted by the city, so that they had to connect themselves with the university of jurisprudence. But a few years later we find them already in possession again of a few rectors, and in 1316 their right was formally recognized in a compromise between the university of jurisprudence and the city. The students called themselves 'philosophi et medici' or 'physici'; also by the common name of 'artistæ.' Finally a school of theology, founded by pope Innocent VI., was added in the second half of the 14th century; it was placed under the bishop, and organized in imitation of the school at Paris, so that it was a 'universitas magistrorum,' not 'scholarium.' As, however, by this arrangement the students of theology in the theological university had no civil privileges of their own, they were considered individually as belonging to the 'artistæ.' From this time Bologna had four universities, two of jurisprudence, the one of medicine and philosophy, and the theological, the first two having no connection with the others, forming a unit, and therefore frequently designated as one university."—F. C. Savigny, *The Universities of the Middle Ages* (*Barnard's Am. Journal of Education*, v. 22, pp. 278–279).—**Other Universities.**—"The oldest and most frequented university in Italy, that of Bologna, is represented as having flourished in the twelfth century. Its prosperity in early times depended greatly on the personal conduct of the principal professors, who, when they were not satisfied with their entertainment, were in the habit of seceding with their pupils to other cities. Thus high schools were opened from time to time in Modena, Reggio, and elsewhere by teachers who broke the oaths that bound them to reside in Bologna, and fixed their centre of education in a rival town. To make such temporary changes was not difficult in an age when what we have to call an university, consisted of masters and scholars, without college buildings, without libraries, without endowments, and without scientific apparatus. The technical name for such institutions seems to have been 'studium scholarium,' Italianised into 'studio' or 'studio pubblico.' Among the more permanent results of these secessions may be mentioned the establishment of the high school at Vicenza by translation from Bologna in 1204, and the opening of a school at Arezzo under similar circumstances in 1215; the great University of Padua first saw the light in consequence of political discords forcing the professors to quit Bologna for a season. The first half of the thirteenth century witnessed the foundation of these 'studi' in considerable numbers. That of Vercelli was opened in 1228, the municipality providing two certified copyists for the convenience of students who might wish to purchase textbooks. In 1224 the Emperor Frederick II., to whom the south of Italy owed a precocious eminence in literature, established the University of Naples by an Imperial diploma. With a view to rendering it the chief seat of learning in his dominions, he forbade the subjects of the Regno to frequent other schools, and suppressed the University of Bologna by letters general. Thereupon Bologna joined the Lombard League, defied the Emperor, and refused to close the schools, which numbered at that period about ten thou-

sand students of various nationalities. In 1227 Frederick revoked his edict, and Bologna remained thenceforward unmolested. Political and internal vicissitudes, affecting all the Italian universities at this period, interrupted the prosperity of that of Naples. In the middle of the thirteenth century Salerno proved a dangerous rival. . . . An important group of 'studi publici' owed their origin to Papal or Imperial charters in the first half of the fourteenth century. That of Perugia was founded in 1307 by a Bull of Clement V. That of Rome dated from 1303, in which year Boniface VIII. gave it a constitution by a special edict; but the translation of the Papal See to Avignon caused it to fall into premature decadence. The University of Pisa had already existed for some years, when it received a charter in 1343 from Clement VI. That of Florence was first founded in 1321. . . . The subjects taught in the high schools were Canon and Civil Law, Medicine, and Theology. These faculties, important for the professional education of the public, formed the staple of the academical curriculum. Chairs of Rhetoric, Philosophy, and Astronomy were added according to occasion, the last sometimes including the study of judicial astrology. If we enquire how the humanists or professors of classic literature were related to the universities, we find that, at first at any rate, they always occupied a second rank. The permanent teaching remained in the hands of jurists, who enjoyed life engagements at a high rate of pay, while the Latinists and Grecians could only aspire to the temporary occupation of the Chair of Rhetoric, with salaries considerably lower than those of lawyers or physicians."—J. A. Symonds, *Renaissance in Italy: the Revival of Learning*, ch. 3.—"Few of the Italian universities show themselves in their full vigour till the thirteenth and fourteenth centuries, when the increase of wealth rendered a more systematic care for education possible. At first there were generally three sorts of professorships—one for civil law, another for canonical law, the third for medicine; in course of time professorships of rhetoric, of philosophy, and of astronomy were added, the last commonly, though not always, identical with astrology. The salaries varied greatly in different cases. Sometimes a capital sum was paid down. With the spread of culture competition became so active that the different universities tried to entice away distinguished teachers from one another, under which circumstances Bologna is said to have sometimes devoted the half of its public income (20,000 ducats) to the university. The appointments were as a rule made only for a certain time, sometimes for only half a year, so that the teachers were forced to lead a wandering life, like actors. Appointments for life were, however, not unknown. . . . Of the chairs which have been mentioned, that of rhetoric was especially sought by the humanist; yet it depended only on his familiarity with the matter of ancient learning whether or no he could aspire to those of law, medicine, philosophy, or astronomy. The inward conditions of the science of the day were as variable as the outward conditions of the teacher. Certain jurists and physicians received by far the largest salaries of all, the former chiefly as consulting lawyers for the suits and claims of the state which employed them. . . . Personal intercourse between the teachers and the taught, public disputations, the constant use

of Latin and often of Greek, the frequent changes of lecturers and the scarcity of books, gave the studies of that time a colour which we cannot represent to ourselves without effort. There were Latin schools in every town of the least importance, not by any means merely as preparatory to higher education, but because, next to reading, writing, and arithmetic, the knowledge of Latin was a necessity; and after Latin came logic. It is to be noted particularly that these schools did not depend on the Church, but on the municipality; some of them, too, were merely private enterprises. This school system, directed by a few distinguished humanists, not only attained a remarkable perfection of organisation, but became an instrument of higher education in the modern sense of the phrase."—J. Burckhardt, *The Civilisation of the Period of the Renaissance in Italy*, v. 1, pt. 3, ch. 5.

Germany.—Prague and its Offspring.—"The earliest university in Germany was that of Prague. It was in 1348, under the Emperor Charles IV., when the taste for letters had revived so signally in Europe, when England may be said to have possessed her two old universities already for three centuries, Paris her Sorbonne already for four, that this university was erected as the first of German Universities. The idea originated in the mind of the Emperor, who was educated in Paris, at the university of that town, and was eagerly taken up by the townspeople of that ancient and wealthy city, for they foresaw that affluence would shower upon them if they could induce a numerous crowd of students to flock together within their walls. But the Pope and the Emperor took an active part in favouring and authorizing the institution; they willingly granted to it wide privileges, and made it entirely independent of Church and State. The teaching of the professors, and the studies of the students, were submitted to no control whatever. After the model of the University of Paris, they divided themselves into different faculties, and made four such divisions—one for divinity, another for medical science, a third for law, and a fourth for philosophy. The last order comprised those who taught and learned the fine arts and the sciences, which two departments were separate at Sorbonne. All the German universities have preserved this outward constitution, and in this, as in many other circumstances, the precedent of Prague has had a prevailing influence on her younger sister institutions. The same thing may be said particularly of the disciplinary tone of the university. In other countries, universities sprang from rigid clerical and monastic institutions, or bore a more or less ecclesiastical character which imposed upon them certain more retired habits, and a severer kind of discipline. Prague took from the beginning a course widely different. The students, who were partly Germans, partly of Slavonian blood, enjoyed a boundless liberty. They lodged in the houses of the townspeople, and by their riches, their mental superiority, and their number (they are recorded to have been as many as twenty thousand in the year 1409), became the undisputed masters of the city. The professors and the inhabitants of Prague, far from checking them, rather protected the prerogatives of the students, for they found out that all their prosperity depended on them. . . . Not two generations had passed since the erec-

tion of an institution thus constituted, before Huss and Jerome of Prague began to teach the necessity of an entire reformation of the Church. The phenomenon is characteristic of the bold spirit of inquiry that must have grown up at the new University. However, the political consequences that attended the promulgation of such doctrines led almost to the dissolution of the University itself. For, the German part of the students broke up, in consequence of repeated and serious quarrels that had taken place with the Bohemian and Slavonic party, and went to Leipzig, where straightway a new and purely German University was erected. While Prague became the seat of a protracted and sanguinary war, a great number of Universities rose into existence around it, and attracted the crowds that had formerly flocked to the Bohemian capital. It appeared as if Germany, though it had received the impulse from abroad, would leave all other countries behind itself in the erection and promotion of these learned institutions, for all the districts of the land vied with each other in creating universities. Thus arose those of Rostock, Ingolstadt, Vienna, Heidelberg, Cologne, Erfurt, Tübingen, Greifswalde, Trèves, Mayence and Bâles—schools which have partly disappeared again during the political storms of subsequent ages. The beginning of the sixteenth century added to them one at Frankfort on the Oder, and another, the most illustrious of all, Wittenberg. Everyone who is acquainted with the history and origin of the Reformation, knows what an important part the latter of these universities took in the weighty transactions of those times. . . . Wittenberg remained by no means the only champion of Protestantism. At Marburg, Jena, Königsberg, and Helmstadt, universities of a professedly Protestant character were erected. These schools became the cradle and nurseries of the Reformation."—*The Universities of Germany* (Dublin University Magazine, v. 46, pp. 83-85).—"The German universities of the fourteenth and fifteenth centuries were founded in the following order: Prague, 1348; Vienna, 1388; Erfurt, 1392; Leipsic, 1409; Rostock, 1419; Greifswald, 1456; Freiburg, 1457; Ingolstadt, 1472; Tübingen, 1477; and Mayence, 1477. Thus, it will be seen that they were established in quick succession—an unmistakable proof of the growing scientific interest of the age."—F. V. N. Painter, *Hist. of Education*, ch. 3, sect. 5 (k).

Netherlands.—"Tradition reports that a school had . . . been founded at Utrecht, by some zealous missionary, in the time of Charles Martel, at which his son Pepin received his education. However this may have been, the renown of the Utrecht School of St. Martin is of very ancient date. . . . During the invasion by the Normans, this school at Utrecht was suppressed, but was reestablished in 917, and regained its former renown. The Emperor, Henry the Fowler, placed here his three sons, Otto, Henry and Bruno, to be educated, of whom the last became afterward archbishop of Cologne and archduke of Lottringen, and was noted for his extraordinary learning and friendship for the poet Prudentius. At the beginning of the 12th century, Utrecht possessed no less than five flourishing schools, several of which had each a 'rector' in addition to the priests who had the general control. At about the same time, several convents became distinguished as educational institutions, especi-

ally those of Egmond, Nymwegen, Middleburg, in Zealand, and Aduwert, near Gröningen. In Holland, as in Belgium, in addition to the schools that were attached to the cathedrals, convents, and chapters, there were established in the course of the twelfth century, by the more wealthy communities, public schools especially designed for the instruction of the citizens and laity. It is also worthy of notice that the authority to open such schools was always derived from the counts—by whom it was conferred, sometimes upon the cities as an especial privilege, and sometimes upon merely private persons as a mark of particular favor. The jurisdiction of the feudal lords was the same here as in Belgium; but while in the latter country, with the exception perhaps of the elementary schools in some of the cities, the right of supervision everywhere devolved upon the chapters, instruction in these public schools of Holland was wholly withdrawn from the clergy, and they were made essentially secular in their character. The privilege of thus establishing schools was conferred upon some of the cities at the following dates: Dort, by Count Floris V., A. D. 1290; the Hague, 1322—Leyden, 1324—and Rotterdam in 1328, by William III.; Delft and Amsterdam, in 1334, by William IV.; Leyden again, 1357—Haarlem, 1389—Alkmar, 1398—Hoorn, 1358 and 1390—the Hague, 1393—Schiedam and Ondewater, 1394—and Rotterdam, in 1402, by Albert of Bavaria. These schools, adds Stallaert, on the authority of Buddingh, were generally styled 'School en Schryfambacht,' 'Schoole en Kostern,' (school and writing offices, schools and clerks' houses,) and the 'Schoolmijsters' (school-masters) were looked upon as professional men or craftsmen—as was the case also in Belgium, where they formed distinct guilds and fraternities. These public schools of Holland were divided into 'large' and 'small' schools, (*grooten en bijscholen*), Latin being taught in the first division. The institution at Zwolle, attained special notoriety in the fourteenth century, under the direction of the celebrated Johan Cele. According to Thomas à Kempis and Ten Bussche, its pupils numbered about a thousand, gathered from Holland, Belgium, and the principal provinces of Germany."—*Public Instruction in Holland* (Barnard's *Am. Journal of Education*, v. 14).

England.—Early Oxford.—"The University of Oxford did not spring into being in any particular year, or at the bidding of any particular founder: it was not established by any formal charter of incorporation. Taking its rise in a small and obscure association of teachers and learners, it developed spontaneously into a large and important body, long before its existence was recognised by prince or by prelate. There were certainly schools at Oxford in the reign of Henry I., but the previous history of the place does not throw much light on their origin, or explain the causes of their popularity. The town seems to have grown up under the shadow of a nunnery, which is said to have been founded by St. Frideswyde as far back as the eighth century. Its authentic annals, however, begin with the year 912, when it was occupied and annexed by Edward the Elder, King of the West Saxons. . . . Oxford was considered a place of great strategical importance in the eleventh century. Its position on the borders of Mercia and Wessex rendered it also particularly convenient

for parleys between Englishmen and Danes, and for great national assemblies. . . . Retaining for a while its rank as one of the chief centres of political life in the south of England, and as a suitable meeting-place for parliaments and synods, Oxford became thenceforward more and more distinctively known as a seat of learning and a nursery of clerks. The schools which existed at Oxford before the reign of King John, are so seldom and so briefly noticed in contemporary records, that it would be difficult to show how they developed into a great university, if it were not for the analogy of kindred institutions in other countries. There can be little doubt, however, that the idea of a university, the systems of degrees and faculties, and the nomenclature of the chief academical officers, were alike imported into England from abroad. . . . In the earliest and broadest sense of the term, a university had no necessary connexion with schools or literature, being merely a community of individuals bound together by some more or less acknowledged tie. Regarded collectively in this light, the inhabitants of any particular town might be said to constitute a university, and in point of fact the Commonalty of the townsmen of Oxford was sometimes described as a university in formal documents of the middle ages. The term was, however, specially applied to the whole body of persons frequenting the schools of a large studium. Ultimately it came to be employed in a technical sense as synonymous with studium, to denote the institution itself. This last use of the term seems to be of English origin, for the University of Oxford is mentioned as such in writs and ordinances of the years 1238, 1240, and 1253, whereas the greater seat of learning on the banks of the Seine was, until the year 1263, styled 'the University of the Masters,' or 'the University of the Scholars,' of Paris. The system of academical degrees dates from the second half of the twelfth century."—H. C. M. Lyte, *A History of the University of Oxford*, ch. 1. —"In the early Oxford . . . of the twelfth and most of the thirteenth centuries, colleges with their statutes were unknown. The University was the only corporation of the learned, and she struggled into existence after hard fights with the town, the Jews, the Friars, the Papal courts. The history of the University begins with the thirteenth century. She may be said to have come into being as soon as she possessed common funds and rents, as soon as fines were assigned, or benefactions contributed to the maintenance of scholars. Now the first recorded fine is the payment of fifty-two shillings by the townsmen of Oxford as part of the compensation for the hanging of certain clerks. In the year 1214 the Papal Legate, in a letter to his 'beloved sons in Christ, the burgesses of Oxford,' bade them excuse the 'scholars studying in Oxford' half the rent of their halls, or hospitia, for the space of ten years. The burghers were also to do penance, and to feast the poorer students once a-year; but the important point is, that they had to pay that large yearly fine 'propter suspendium clericorum'—all for the hanging of the clerks. Twenty-six years after this decision of the Legate, Robert Grosseteste, the great Bishop of Lincoln, organized the payment and distribution of the fine, and founded the first of the chests, the chest of St. Frideswyde. These chests were a kind of Mont de Piété, and to found them

was at first the favourite form of benefaction. Money was left in this or that chest, from which students and masters would borrow, on the security of pledges, which were generally books, cups, daggers, and so forth. Now, in this affair of 1214 we have a strange passage of history, which happily illustrates the growth of the University. The beginning of the whole affair was the quarrel with the town, which in 1209, had hanged two clerks, 'in contempt of clerical liberty.' The matter was taken up by the Legate—in those bad years of King John, the Pope's viceroy in England—and out of the humiliation of the town the University gained money, privileges, and halls at low rental. 'These were precisely the things that the University wanted. About these matters there was a constant strife, in which the Kings as a rule, took part with the University. . . . Thus gradually the University got the command of the police, obtained privileges which enslaved the city, and became masters where they had once been despised, starving scholars. . . . The result, in the long run, was that the University received from Edward III. 'a most large charter, containing many liberties, some that they had before, and others that he had taken away from the town.' Thus Edward granted to the University 'the custody of the assize of bread, wine, and ale,' the supervising of measures and weights, the sole power of clearing the streets of the town and suburbs. Moreover, the Mayor and the chief Burghers were condemned yearly to a sort of public penance and humiliation on St. Scholastica's Day. Thus, by the middle of the fourteenth century, the strife of Town and Gown had ended in the complete victory of the latter.'—A Lang, *Oxford*, ch. 2.—'To mark off the Middle Age from the Modern Period of the University is certainly very difficult. Indeed the earlier times do not form a homogeneous whole, but appear perpetually shifting and preparing for a new state. The main transition however was undoubtedly about the middle of the fourteenth century; and the Reformation, a remarkable crisis, did but confirm what had been in progress for more than a century and a half; so that the Middle Age of the University contained the thirteenth century, and barely the former half of the fourteenth. . . . There is no question, that during this Middle Age the English Universities were distinguished far more than ever afterwards by energy and variety of intellect. Later times cannot produce a concentration of men eminent in all the learning and science of the age, such as Oxford and Cambridge then poured forth, mightily influencing the intellectual development of all Western Christendom. Their names indeed may warn us against an indiscriminating disparagement of the Monasteries, as 'hotbeds of ignorance and stupidity'; when so many of those worthies were monks of the Benedictine, Franciscan, Dominican, Carmelite, or reformed Augustinian order. But in consequence of this surpassing celebrity, Oxford became the focus of a prodigious congregation of students, to which nothing afterwards bore comparison. The same was probably true of Cambridge in relative proportion. . . . A tolerably well authenticated account, attacked of late by undue scepticism, fixes [the number of] those of Oxford at thirty thousand, in the middle of the thirteenth century. The want indeed of contemporary evidence

must make us cautious of yielding absolute belief to this: in fact we have no document on this matter even as old as the Reformation. . . . Not only did the Church and the new orders of Monks draw great numbers thither, but the Universities themselves were vast High Schools, comprising boys and even children. It is not extravagant, if Cambridge was not yet in great repute, to imagine fifteen thousand students of all ages at Oxford, and as many more attendants. Nor was it at all difficult to accommodate them in the town, when Oxford contained three hundred Halls and Inns: and as several students dwelt in one room, and were not careful for luxury, each building on an average might easily hold one hundred persons. The style of Architecture was of the simplest and cheapest kind, and might have been easily run up on a sudden demand: and a rich flat country, with abundant water carriage, needed not to want provisions. That the numbers were vast, is implied by the highly respectable evidence which we have, that as many as three thousand migrated from Oxford on the riots of 1209; although the Chronicler expressly states that not all joined in the secession. In the reign of Henry III. the reduced numbers are reckoned at fifteen thousand. After the middle of the fourteenth century, they were still as many as from three to four thousand; and after the Reformation they mount again to five thousand. On the whole therefore the computation of thirty thousand, as the maximum, may seem, if not positively true, yet the nearest approximation which we can expect. Of Cambridge we know no more than that the numbers were much lower than at Oxford. . . . While in the general, there was a substantial identity between the scholastic learning of Oxford and of Paris, yet Oxford was more eager in following positive science:—and this, although such studies were disparaged by the Church, and therefore by the public. Indeed originally the Church had been on the opposite side; but the speculative tendency of the times had carried her over, so that speculation and theology went hand in hand. In the middle of the thirteenth century we may name Robert Grosseteste and John Basingstock, as cultivating physical science, and (more remarkable still) the Franciscan Roger Bacon: a man whom the vulgar held to be equal to Merlin and Michael Scott as a magician, and whom posterity ranks by the noblest spirits of the fifteenth and sixteenth centuries, in all branches of positive science,—except theology. A biography of Roger Bacon should surely be written! Unfortunately, we know nothing as to the influence of these men on their times, nor can we even learn whether the University itself was at all interested in their studies. . . . We have . . . a strange testimony to the interest which in the beginning of the fourteenth century the mass of the students took in the speculation of their elders; for the street rows were carried on under the banners of Nominalists and Realists. . . . The coarse and ferocious manners prevalent in the Universities of the Middle Ages are every where in singular contrast to their intellectual pretensions: but the Universities of the Continent were peaceful, decorous, dignified,—compared with those of England. The storms which were elsewhere occasional, were at Oxford the permanent atmosphere. For nearly two centuries our 'Foster Mother' of Oxford lived in a din of uninterrupted

furious warfare; nation against nation, school against school, faculty against faculty. Halls, and finally Colleges, came forward as combatants; and the University, as a whole, against the Town; or against the Bishop of Lincoln; or against the Archbishop of Canterbury. Nor was Cambridge much less pugnacious."—V. A. Huber, *The English Universities*, v. 1, ch. 3.—Cambridge.—"Various facts and circumstances . . . lend probability to the belief that, long before the time when we have certain evidence of the existence of Cambridge as a university, the work of instruction was there going on. The *Camboriturum* of the Roman period, the *Grantebrycgr* of the Anglo-Saxon Chronicle, the *Grantebrige* of Domesday, must always have been a place of some importance. It was the meeting-place of two great Roman roads,—Akeman Street, running east and west, and the Via Devana, traversing the north and the south. . . . Confined at first to the rising ground on the left bank of the river, it numbered at the time of the Norman Conquest as many as four hundred houses, of which twenty-seven were pulled down to make way for the castle erected by William the Conqueror. . . . Under the castle walls, with the view, it would seem, of making some atonement for many a deed of violence and wrong, the Norman sheriff, Picot by name, founded the Church of St. Giles, and instituted in connection with it a small body of secular canons. . . . The year 1112 was marked by the occurrence of an event of considerable importance in connection with the subsequent history of the university. The canons of St. Giles, attended by a large concourse of the clergy and laity, crossed the river, and took up their abode in a new and spacious priory at Barnwell. . . . The priory at Barnwell, which always ranked among the wealthiest of the Cambridge foundations, seems from the first to have been closely associated with the university; and the earliest university exhibitions were those founded by William de Kilkenny, bishop of Ely from 1254 to 1257, for two students of divinity, who were to receive annually the sum of two marks from the priory. In the year 1133 was founded the nunnery of St. Rhadegund, which, in the reign of Henry VII., was converted into Jesus College; and in 1135 a hospital of Augustinian canons, dedicated to St. John the Evangelist, was founded by Henry Frost, a burgess of the town. . . . It was . . . a very important foundation, inasmuch as it not only became by conversion in the sixteenth century the College of St. John the Evangelist, but was also . . . the foundation of which Peterhouse, the earliest Cambridge college, may be said to have been in a certain sense the offshoot. . . . In the year 1229 there broke out at Paris a feud of more than ordinary gravity between the students and the citizens. Large numbers of the former migrated to the English shores; and Cambridge, from its proximity to the eastern coast, and as the centre where Prince Louis, but a few years before, had raised the royal standard, seems to have attracted the great majority. . . . The university of Cambridge, like that of Oxford, was modelled mainly on the university of Paris. Its constitution was consequently oligarchic rather than democratic, the government being entirely in the hands of the teaching body, while the bachelors and undergraduates had no share in the passing of new laws and regulations."—J.

B. Mullinger, *A History of the University of Cambridge*, ch. 1-2.—"The earliest existing college at Cambridge is St. Peter's, generally called Peterhouse, historically founded A. D. 1257, in the reign of Henry III. The Universities are known merely by their situation; as Oxford, Cambridge, Durham, St. Andrews'; but each college has a name, according to the taste of its founder or first members. These names may be divided into two classes, those named from the founder, as Pembroke, Clare, Gonville and Caius (this had two founders, the restorer being Dr. Kaye, who Latinized his name into Caius, always pronounced Keys), King's (from King Henry VI.),—Queens' (from the queens both of Henry VI. and Edward IV.), Sidney Sussex, and Downing;—and those named for beatified persons and objects of worship,—St. Peter's, St. John's, St. Catharine's, St. Mary Magdalene, Corpus Christi, Emmanuel, Jesus Christ's, Trinity and Trinity Hall. The apparent impiety of these names, which in one case of an ancient name now changed, was absolutely revolting, entirely passes off with a few days' use. St. Catharine's soon becomes Cats, and St. Mary Magdalene is always called Maudlin. You readily admit the superiority of Trinity over Corpus ale; go to see a friend who lives on Christ's piece; and hear with regret, that in the boat races Emmanuel has been bumped by Jesus; an epithet being probably prefixed to the last name. These names of course were given in monkish times,—Trinity by Henry VIII., but all the colleges except one were founded before the reign of James I. . . . The seventeen colleges . . . are distinct corporations. Their foundations, resources, buildings, governing authorities and students, are entirely separate from each other. Nor has any one college the least control in any other. The plan, however, is much the same in all. The presiding authority is in most cases called the Master, or speaking more generally, the Head; while the net proceeds of all the college funds—for the vast wealth supposed to belong to the University really is in the hands of the separate colleges—are distributed among certain of the graduates, called Fellows, who with the Head constitute the corporation. These corporations give board and lodging on various terms to such students as choose to enter the college and comply with its rules, in order to receive its assistance in obtaining the honors of the University; and each college offers its own peculiar inducements to students. . . . The whole body of the colleges, taken together, constitutes the University. All those who after residing seven years at some college, have taken the degree of Master of Arts, or a higher one, and keep their name on the college lists by a small payment, vote at the University elections for members of Parliament and all other officers, and manage its affairs. . . . The colleges, at certain intervals, present such students as comply with their conditions to University authorities for matriculation, for certain examinations, and for the reception of degrees; and until one receives the degree of Master of Arts, he must remain a member of some college, not necessarily one and the same, to hold any University privileges. After this stage, he may, under certain conditions, break up all his college connections, and yet remain in the University."—W. Everett, *On the Cam.*, lect. 1.

Spain and Portugal.—"Salamanca was founded in the 13th century, and received its statutes

in the year 1422, out of which was developed the following constitution. The rector, with eight 'consiliarii,' all students, who could appoint their successors, administered the university. The doctors render the oath of obedience to the rector. The 'domscholaster' is the proper judge of the school; but he swears obedience to the rector. A bachelor of law must have studied six years, and after five years more he could become licentiate. In filling a paid teachership, the doctor was chosen next in age of those holding the diploma, unless a great majority of the scholars objected, in which case the rector and council decided. This liberal constitution for the scholars is in harmony with the code of Alphonso X., soon after 1250, in which the liberty of instruction was made a general principle of law. This constitution continued in Salamanca into the 17th century, for Retes speaks of a disputation which the rector held at that time under his presidency. Alcala university was established by cardinal Ximenes, in 1510, for the promotion of the study of theology and philosophy, for which reason it contained a faculty of canon, but not of civil law. The center of the university was the college of St. Ildefonso, consisting of thirty-three prebendaries, who could be teachers or scholars, since for admission were required only poverty, the age of twenty, and the completion of the course of the preparatory colleges. These thirty-three members elected annually a rector and three councilors, who controlled the entire university. Salaried teachers were elected, not by the rector and council alone, but by all the students. It had wide reputation. When visited by Francis I., while a prisoner of Spain, he was welcomed by 11,000 students. The Coimbra university, in Portugal, received statutes in 1309, from king Dionysius, with a constitution similar to those just mentioned."—F. C. Savigny, *The Universities of the Middle Ages* (Barnard's *Am. Journal of Education*, v. 22, p. 324).

Renaissance.

"Modern education begins with the Renaissance. The educational methods that we then begin to discern will doubtless not be developed and perfected till a later period; the new doctrines will pass into practice only gradually, and with the general progress of the times. But from the sixteenth century education is in possession of its essential principles. . . . The men of the sixteenth century having renewed with classical antiquity an intercourse that had been too long interrupted, it was natural that they should propose to the young the study of the Greeks and the Romans. What is called secondary instruction really dates from the sixteenth century. The crude works of the Middle Age are succeeded by the elegant compositions of Athens and Rome, henceforth made accessible to all through the art of printing; and, with the reading of the ancient authors, there reappear through the fruitful effect of imitation, their qualities of correctness in thought, of literary taste, and of elegance in form. In France, as in Italy, the national tongues, moulded, and, as it were, consecrated by writers of genius, become the instruments of an intellectual propaganda. Artistic taste, revived by the rich products of a race of incomparable artists, gives an extension to the horizon of life, and creates a new class of emotions. Finally, the Protestant Reform develops

individual thought and free inquiry, and at the same time, by its success, it imposes still greater efforts on the Catholic Church. This is not saying that everything is faultless in the educational efforts of the sixteenth century. First, as is natural for innovators, the thought of the teachers of this period is marked by enthusiasm rather than by precision. They are more zealous in pointing out the end to be attained, than exact in determining the means to be employed. Besides, some of them are content to emancipate the mind, but forget to give it proper direction. Finally, others make a wrong use of the ancients; they are too much preoccupied with the form and the purity of language; they fall into Ciceromania, and it is not their fault if a new superstition, that of rhetoric, does not succeed the old superstition, that of the Syllogism."—G. Compayré, *The Hist. of Pedagogy*, ch. 5 (sect. 92-93).

Rabelais' Gargantua.—Rabelais' description of the imaginary education of Gargantua gives us the educational ideas of a man of genius in the 16th century: "Gargantua," he writes, "awaked, then, about four o'clock in the morning. Whilst they were rubbing him, there was read unto him some chapter of the Holy Scripture aloud and clearly, with a pronunciation fit for the matter, and hereunto was appointed a young page born in Basché, named Anagnostes. According to the purpose and argument of that lesson, he oftentimes gave himself to revere, adore, pray, and send up his supplications to that good God whose word did show His majesty and marvellous judgments. Then his master repeated what had been read, expounding unto him the most obscure and difficult points. They then considered the face of the sky, if it was such as they had observed it the night before, and into what signs the sun was entering, as also the moon for that day. This done, he was appareled, combed, curled, trimmed and perfumed, during which time they repeated to him the lessons of the day before. He himself said them by heart, and upon them grounded practical cases concerning the estate of man, which he would prosecute sometimes two or three hours, but ordinarily they ceased as soon as he was fully clothed. Then for three good hours there was reading. This done, they went forth, still conferring of the substance of the reading, and disported themselves at ball, tennis, or the 'pile trigone,' gallantly exercising their bodies, as before they had done their minds. All their play was but in liberty, for they left off when they pleased, and that was commonly when they did sweat, or were otherwise weary. Then were they very well dried and rubbed, shifted their shirts, and walking soberly, went to see if dinner was ready. Whilst they stayed for that, they did clearly and eloquently recite some sentences that they had retained of the lecture. In the mean time Master Appetite came, and then very orderly sat they down at table. At the beginning of the meal there was read some pleasant history of ancient prowess, until he had taken his wine. Then, if they thought good, they continued reading, or began to discourse merrily together; speaking first of the virtue, propriety, efficacy, and nature of all that was served in at that table; of bread, of wine, of water, of salt, of flesh, fish, fruits, herbs, roots, and of their dressing. By means whereof, he learned in a little time all the passages that on these subjects are to be found in Pliny, Athenæus, Dioscorides,

Julius, Pollux, Galen, Porphyrius, Oppian, Polybius, Heliodorus, Aristotle, Ælian, and others. Whilst they talked of these things, many times, to be the more certain, they caused the very books to be brought to the table, and so well and perfectly did he in his memory retain the things above said, that in that time there was not a physician that knew half so much as he did. Afterwards they conferred of the lessons read in the morning, and ending their repast with some conserve of quince, he washed his hands and eyes with fair fresh water, and gave thanks unto God in some fine canticle, made in praise of the divine bounty and munificence. This done, they brought in cards, not to play, but to learn a thousand pretty tricks and new inventions, which were all grounded upon arithmetic. By this means he fell in love with that numerical science, and every day after dinner and supper he passed his time in it as pleasantly as he was wont to do at cards and dice. . . . After this they recreated themselves with singing musically, in four or five parts, or upon a set theme, as it best pleased them. In matter of musical instruments, he learned to play the lute, the spinet, the harp, the German flute, the flute with nine holes, the violin, and the sackbut. This hour thus spent, he betook himself to his principal study for three hours together, or more, as well to repeat his matutinal lectures as to proceed in the book wherein he was, as also to write handsomely, to draw and form the antique and Roman letters. This being done, they went out of their house, and with them a young gentleman of Touraine, named Gymnast, who taught the art of riding. Changing then his clothes, he mounted on any kind of horse, which he made to bound in the air, to jump the ditch, to leap the palisade, and to turn short in a ring both to the right and left hand. . . . The time being thus bestowed, and himself rubbed, cleansed, and refreshed with other clothes, they returned fair and softly; and passing through certain meadows, or other grassy places, beheld the trees and plants, comparing them with what is written of in the books of the ancients, such as Theophrastus, Dioscorides, Marinus, Pliny, Nicander, Macer, and Galen, and carried home to the house great handfuls of them, whereof a young page called Rhizotomos had charge—together with hoes, picks, spuds, pruning-knives, and other instruments requisite for herbhorising. Being come to their lodging, whilst supper was making ready, they repeated certain passages of that which had been read, and then sat down at table. . . . During that repast was continued the lesson read at dinner as long as they thought good: the rest was spent in good discourse, learned and profitable. After that they had given thanks, they set themselves to sing musically, and play upon harmonious instruments, or at those pretty sports made with cards, dice or cups,—thus made merry till it was time to go to bed; and sometimes they would go make visits unto learned men, or to such as had been travellers in strange countries. At full night they went into the most open place of the house to see the face of the sky, and there beheld the comets, if any were, as likewise the figures, situations, aspects, oppositions, and conjunctions of the stars. Then with his master did he briefly recapitulate, after the manner of the Pythagoreans, that which he had read, seen, learned, done, and understood in the whole course of that day.

Then they prayed unto God the Creator, falling down before Him, and strengthening their faith towards Him, and glorifying Him for His boundless bounty; and, giving thanks unto Him for the time that was past, they recommended themselves to His divine clemency for the future. Which being done, they entered upon their repose."—W. Besant, *Readings in Roberval*, pp. 20–29.

Germany.—"The schools of France and Italy owed little to the great modern movement of the Renaissance. In both these countries that movement operated, in both it produced mighty results; but of the official establishments for instruction it did not get hold. In Italy the mediæval routine in those establishments at first opposed a passive resistance to it; presently came the Catholic reaction, and sedulously shut it out from them. In France the Renaissance did not become a power in the State, and the routine of the schools sufficed to exclude the new influence till it took for itself other channels than the schools. But in Germany the Renaissance became a power in the State; allied with the Reformation, where the Reformation triumphed in German countries the Renaissance triumphed with it, and entered with it, into the public schools. Melancthon and Erasmus were not merely enemies and subverters of the dominion of the Church of Rome, they were eminent humanists; and with the great but single exception of Luther, the chief German reformers were all of them distinguished friends of the new classical learning, as well as of Protestantism. The Romish party was in German countries the ignorant party also, the party untouched by the humanities and by culture. Perhaps one reason why in England our schools have not had the life and growth of the schools of Germany and Holland is to be found in the separation, with us, of the power of the Reformation and the power of the Renaissance. With us, too, the Reformation triumphed and got possession of our schools; but our leading reformers were not at the same time, like those of Germany, the nation's leading spirits in intellect and culture. In Germany the best spirits of the nation were then the reformers; in England our best spirits,—Shakspeare, Bacon, Spenser,—were men of the Renaissance, not men of the Reformation, and our reformers were men of the second order. The Reformation, therefore, getting hold of the schools in England was a very different force, a force far inferior in light, resources, and prospects, to the Reformation getting hold of the schools in Germany. But in Germany, nevertheless, as Protestant orthodoxy grew petrified like Catholic orthodoxy, and as, in consequence, Protestantism flagged and lost the powerful impulse with which it started, the school flagged also, and in the middle of the last century the classical teaching of Germany, in spite of a few honourable names like Gesner's, Ernesti's, and Heyne's, seems to have lost all the spirit and power of the 16th century humanists, to have been sinking into a mere church appendage, and fast becoming torpid. A theological student, making his livelihood by teaching till he could get appointed to a parish, was the usual school-master. 'The schools will never be better,' said their great renovator, Friedrich August Wolf, the well-known critic of Homer, 'so long as the school-masters are theologians by profession. A theologian

ical course in a university, with its smattering of classics, is about as good a preparation for a classical master as a course of feudal law would be.' Wolf's coming to Halle in 1783, invited by Von Zedlitz, the minister for public worship under Frederick the Great, a sovereign whose civil projects and labours were not less active and remarkable than his military, marks an era from which the classical schools of Germany, reviving the dormant spark planted in them by the Renaissance, awoke to a new life."—M. Arnold, *Schools and Universities on the Continent*, ch. 14.—It is surprising to learn "how much was left untaught, in the sixteenth century, in the schools. Geography and history were entirely omitted in every scheme of instruction, mathematics played but a subordinate part, while not a thought was bestowed either upon natural philosophy or natural history. Every moment and every effort were given to the classical languages, chiefly to the Latin. But we should be overhasty, should we conclude, without further inquiry, that these branches, thus neglected in the schools, were therefore every where untaught. Perhaps they were reserved for the university alone, and there, too, for the professors of the philosophical faculty, as is the case even at the present day with natural philosophy and natural history; nay, logic, which was a regular school study in the sixteenth century, is, in our day, widely cultivated at the university. We must, therefore, in order to form a just judgment upon the range of subjects taught in the sixteenth century, as well as upon the methods of instruction, first cast a glance at the state of the universities of that period, especially in the philosophical faculties. A prominent source of information on this point is to be found in the statutes of the University of Wittenberg, revised by Melancthon, in the year 1545. The theological faculty appears, by these statutes, to have consisted of four professors, who read lectures on the Old and New Testaments,—chiefly on the Psalms, Genesis, Isaiah, the Gospel of John, and the Epistle to the Romans. They also taught dogmatics, commenting upon the Nicene creed and Augustine's book, 'De spiritu et litera.' The Wittenberg lecture schedule for the year 1561, is to the same effect; only we have here, besides exegesis and dogmatics, catechetics likewise. According to the statutes, the philosophical faculty was composed of ten professors. The first was to read upon logic and rhetoric; the second, upon physics, and the second book of Pliny's natural history; the third, upon arithmetic and the 'Sphere' of John de Sacro Busto; the fourth, upon Euclid, the 'Theoriæ Planetarum' of Burbach, and Ptolemy's 'Almagest'; the fifth and sixth, upon the Latin poets and Cicero; the seventh, who was the 'Pedagogus,' explained to the younger class, Latin Grammar, Linacer 'de emendata structura Latini sermonis,' Terence, and some of Plautus; the eighth, who was the 'Physicus,' explained Aristotle's 'Physics and Dioscorides'; the ninth gave instruction in Hebrew; and the tenth reviewed the Greek Grammar, read lectures on Greek Classics at intervals, also on one of St. Paul's Epistles, and, at the same time, on ethics. . . . Thus the philosophical faculty appears to have been the most fully represented at Wittenberg, as it included ten professors, while the theological had but four, the medical but three. . . . We have a . . . criterion by which

to judge of the limited nature of the studies of that period, as compared with the wide field which they cover at the present day, in the then almost total lack of academical apparatus and equipments. The only exception was to be found in the case of libraries; but, how meager and insufficient all collections of books must have been at that time, when books were few in number and very costly, will appear from the fund, for example, which was assigned to the Wittenberg library; it yielded annually but one hundred gulden, (about \$63,) with which, 'for the profit of the university and chiefly of the poorer students therein, the library may be adorned and enriched with books in all the faculties and in every art, as well in the Hebrew and Greek tongues.' Of other apparatus, such as collections in natural history, anatomical museums, botanical gardens, and the like, we find no mention; and the less, inasmuch as there was no need of them in elucidation of such lectures as the professors ordinarily gave. When Paul Eber, the theologian, read lectures upon anatomy, he made no use of dissection."—K. von Raumer, *Universities in the Sixteenth Century* (*Barnard's Ann. Journal of Education*, v. 5, pp. 535-540).—**Luther and the Schools.**—"Luther . . . felt that, to strengthen the Reformation, it was requisite to work on the young, to improve the schools, and to propagate throughout Christendom the knowledge necessary for a profound study of the holy Scriptures. This, accordingly, was one of the objects of his life. He saw it in particular at the period which we have reached, and wrote to the councillors of all the cities of Germany, calling upon them to found Christian schools. 'Dear sirs,' said he, 'we annually expend so much money on arquebuses, roads, and dikes; why should we not spend a little to give one or two schoolmasters to our poor children? God stands at the door, and knocks; blessed are we if we open to him. Now the word of God abounds. O my dear Germans, buy, buy, while the market is open before your houses. . . . Busy yourselves with the children,' continues Luther, still addressing the magistrates; 'for many parents are like ostriches; they are hardened towards their little ones, and satisfied with having laid the egg, they care nothing for it afterwards. The prosperity of a city does not consist merely in heaping up great treasures, in building strong walls, in erecting splendid mansions, in possessing glittering arms. If madmen fall upon it, its ruin will only be the greater. The true wealth of a city, its safety, and its strength, is to have many learned, serious, worthy, well-educated citizens. And whom must we blame because there are so few at present, except you magistrates, who have allowed our youth to grow up like trees in a forest?' Luther particularly insisted on the necessity of studying literature and languages: 'What use is there, it may be asked, in learning Latin, Greek, and Hebrew? We can read the Bible very well in German. Without languages,' replies he, 'we could not have received the gospel. . . . Languages are the scabbard that contains the sword of the Spirit; they are the casket that guards the jewels; they are the vessel that holds the wine; and as the gospel says, they are the baskets in which the loaves and fishes are kept to feed the multitude. If we neglect the languages, we shall not only eventually lose the gospel, but be unable to speak or

write in Latin or in German. No sooner did men cease to cultivate them than Christendom declined, even until it fell under the power of the pope. But now that languages are again honored, they shed such light that all the world is astonished, and every one is forced to acknowledge that our gospel is almost as pure as that of the apostles themselves. In former times the holy fathers were frequently mistaken, because they were ignorant of languages. . . . If the languages had not made me positive as to the meaning of the word, I might have been a pious monk, and quietly preached the truth in the obscurity of the cloister; but I should have left the pope, the sophists, and their antichristian empire still unshaken."—J. H. Merle d'Aubigné, *Hist. of the Reformation of the 16th Century*, bk. 10, ch. 9 (v. 3). —Luther, in his appeal to the municipal magistrates of Germany, calls for the organization of common schools to be supported at public cost. "Finally, he gives his thought to the means of recruiting the teaching service. 'Since the greatest evil in every place is the lack of teachers, we must not wait till they come forward of themselves; we must take the trouble to educate them and prepare them.' To this end Luther keeps the best of the pupils, boys and girls, for a longer time in school; gives them special instructors, and opens libraries for their use. In his thought he never distinguishes women teachers from men teachers; he wants schools for girls as well as for boys. Only, not to burden parents and divert children from their daily labor, he requires but little time for school duties. . . . 'My opinion is [he says] that we must send the boys to school one or two hours a day, and have them learn a trade at home for the rest of the time. It is desirable that these two occupations march side by side.' . . . Luther gives the first place to the teaching of religion: 'Is it not reasonable that every Christian should know the Gospel at the age of nine or ten?' Then come the languages, not, as might be hoped, the mother tongue, but the learned languages, Latin, Greek, and Hebrew. Luther had not yet been sufficiently rid of the old spirit to comprehend that the language of the people ought to be the basis of universal instruction. He left to Comenius the glory of making the final separation of the primary school from the Latin school. . . . Physical exercises are not forgotten in Luther's pedagogical regulations. But he attaches an especial importance to singing. 'Unless a schoolmaster know how to sing, I think him of no account.' 'Music,' he says again, 'is a half discipline which makes men more indulgent and more mild.' At the same time that he extends the programme of studies, Luther introduces a new spirit into methods. He wishes more liberty and more joy in the school. 'Solomon,' he says, 'is a truly royal schoolmaster. He does not, like the monks, forbid the young to go into the world and be happy. Even as Anselm said: 'A young man turned aside from the world is like a young tree made to grow in a vase.' The monks have imprisoned young men like birds in their cage. It is dangerous to isolate the young.' . . . Do not let ourselves imagine, however, that Luther at once exercised a decisive influence on the current education of his day. A few schools were founded, called writing schools; but the Thirty Years' War, and other events, interrupted the movement of which Luther has the honor of

having been the originator. . . . In the first half of the seventeenth century, Ratich, a German, and Comenius, a Slave, were, with very different degrees of merit, the heirs of the educational thought of Luther. With something of the charlatan and the demagogue, Ratich devoted his life to propagating a novel art of teaching, which he called didactics, and to which he attributed marvels. He pretended, by his method of languages, to teach Hebrew, Greek, and Latin, in six months. But nevertheless, out of many strange performances and lofty promises, there issue some thoughts of practical value. The first merit of Ratich was to give the mother tongue, the German language, the precedence over the ancient languages."—G. Compayré, *The Hist. of Pedagogy*, ch. 6 (sect. 130-134).

Netherlands.—"When learning began to revive after the long sleep of the Middle Ages, Italy experienced the first impulse. Next came Germany and the contiguous provinces of the Low Countries. The force of the movement in these regions is shown by an event of great importance, not always noticed by historians. In 1400, there was established at Deventer, in the north-eastern province of the Netherlands, an association or brotherhood, usually called Brethren of the Life in Common [see BRETHREN OF THE COMMON LOT]. In their strict lives, partial community of goods, industry in manual labor, fervent devotion, and tendency to mysticism, they bore some resemblance to the modern Moravians. But they were strikingly distinguished from the members of this sect by their earnest cultivation of knowledge, which was encouraged among themselves and promoted among others by schools, both for primary and advanced education. In 1430, the Brethren had established forty-five branches, and by 1460 more than thrice that number. They were scattered through different parts of Germany and the Low Countries, each with its school subordinate to the head college at Deventer. It was in these schools, in the middle of the fifteenth century, that a few Germans and Netherlands were, as Hallam says, roused to acquire that extensive knowledge of the ancient languages which Italy as yet exclusively possessed. Their names should never be omitted in any remembrance of the revival of letters; for great was their influence upon subsequent times. Chief among these men were Wessels, of Groningen, 'one of those who contributed most steadily to the purification of religion'; Hegius of Deventer, under whom Erasmus obtained his early education, and who probably was the first man to print Greek north of the Alps; Dringeborg, who founded a good school in Alsace; and Longius, who presided over one at Munster. Thanks to the influence of these pioneers in learning, education had made great progress among the Netherlands by the middle of the sixteenth century. . . . We have the testimony of the Italian Guicciardini to the fact that before the outbreak of the war with Spain even the peasants in Holland could read and write well. As the war went on, the people showed their determination that in this matter there should be no retrogression. In the first Synod of Dort, held in 1574, the clergy expressed their opinion upon the subject by passing a resolution or ordinance which, among other things, directed 'the servants of the Church' to obtain from the magistrates in every locality a permis-

sion for the appointment of schoolmasters, and an order for their compensation as in the past. Before many years had elapsed the civil authorities began to establish a general school system for the country. In 1582, the Estates of Friesland decreed that the inhabitants of towns and villages should, within the space of six weeks, provide good and able Reformed schoolmasters, and those who neglected so to do would be compelled to accept the instructors appointed for them. This seems to have been the beginning of the supervision of education by the State, a system which soon spread over the whole republic. In these schools, however, although they were fostered by the State, the teachers seem, in the main, to have been paid by their pupils. But as years went on, a change came about in this part of the system. It probably was aided by the noteworthy letter which John of Nassau, the oldest brother of William the Silent, the noble veteran who lived until 1606, wrote to his son Lewis William, Stadtholder of Friesland. In this letter, which is worthy of a place on the walls of every schoolhouse in America, the gallant young stadtholder is instructed to urge on the States-General 'that they, according to the example of the pope and Jesuits, should establish free schools, where children of quality as well as of poor families, for a very small sum, could be well and christianly educated and brought up. This would be the greatest and most useful work, and the highest service that you could ever accomplish for God and Christianity, and especially for the Netherlands themselves. . . . In summa, one may jeer at this as popish trickery, and undervalue it as one will: there still remains in the work an inexpressible benefit. Soldiers and patriots thus educated, with a true knowledge of God and a Christian conscience, item, churches and schools, good libraries, books, and printing-presses, are better than all armies, arsenals, armories, munitions, alliances, and treaties that can be had or imagined in the world.' Such were the words in which the Patriarch of the Nassaus urged upon his countrymen a common-school system. In 1609, when the Pilgrim Fathers took up their residence in Leyden, the school had become the common property of the people, and was paid for among other municipal expenses. It was a land of schools supported by the State—a land, according to Motley, 'where every child went to school, where almost every individual inhabitant could write and read, where even the middle classes were proficient in mathematics and the classics, and could speak two or more modern languages.' Does any reader now ask whence the settlers of Plymouth, who came directly from Holland, and the other settlers of New England whose Puritan brethren were to be found in thousands throughout the Dutch Republic, derived their ideas of schools first directed, and then supported by the State?"

—**Leyden University.**—To commemorate the deliverance of Leyden from the Spanish siege in 1574 (see NETHERLANDS: A. D. 1573-1574), "and as a reward for the heroism of the citizens, the Prince of Orange, with the consent of the Estates of the province, founded the University of Leyden. Still, the figment of allegiance remained; the people were only fighting for their constitutional rights, and so were doing their duty to the sovereign. Hence the charter of the university ran in the name of Philip, who was

credited with its foundation, as a reward to his subjects for their rebellion against his evil counsellors and servants, 'especially in consideration of the differences of religion, and the great burdens and hardships borne by the citizens of our city of Leyden during the war with such faithfulness.' Motley calls this 'ponderous irony,' but the Hollanders were able lawyers and intended to build on a legal basis. This event marks an epoch in the intellectual history of Holland and of the world. . . . The new university was opened in 1575, and from the outset took the highest rank. Speaking, a few years ago, of its famous senate chamber, Niebuhr called it 'the most memorable room of Europe in the history of learning.' The first curator was John Van der Does, who had been military commandant of the city during the siege. He was of a distinguished family, but was still more distinguished for his learning, his poetical genius, and his valor. Endowed with ample funds, the university largely owed its marked pre-eminence to the intelligent foresight and wise munificence of its curators. They sought out and obtained the most distinguished scholars of all nations, and to this end spared neither pains nor expense. Diplomatic negotiation and even princely mediation were often called in for the acquisition of a professor. Hence it was said that it surpassed all the universities of Europe in the number of its scholars of renown. These scholars were treated with princely honors. . . . The 'mechanicals' of Holland, as Elizabeth called them, may not have paid the accustomed worship to rank, but to genius and learning they were always willing to do homage. Space would fail for even a brief account of the great men, foreign and native, who illuminated Leyden with their presence. . . . But it was not alone in scholarship and in scientific research that the University of Leyden gave an impetus to modern thought. Theological disputes were developed there at times, little tempests which threatened destruction to the institution, but they were of short duration. The right of conscience was always respected, and in the main the right of full and public discussion. . . . When it was settled that dissenters could not be educated in the English universities, they flocked to Leyden in great numbers, making that city, next to Edinburgh, their chief resort. Eleven years after the opening of the University of Leyden, the Estates of democratic Friesland, amid the din of war, founded the University of Franeker, an institution which was to become famous as the home of Arminius. . . . Both of these universities were perpetually endowed with the proceeds of the ecclesiastical property which had been confiscated during the progress of the war."

—D. Campbell, *The Puritan in Holland, England, and America*, ch. 2, 20, and 3.

England.—"In contemplating the events of the fifteenth and sixteenth centuries, in their influence on English civilisation, we are reminded once more of the futility of certain modern aspirations. No amount of University Commissions, nor of well-meant reforms, will change the nature of Englishmen. It is impossible, by distributions of University prizes and professorships, to attract into the career of letters that proportion of industry and ingenuity which, in Germany for example, is devoted to the scholastic life. Politics, trade, law, sport, religion,

will claim their own in England, just as they did at the Revival of Letters. The illustrious century which Italy employed in unburying, appropriating, and enjoying the treasures of Greek literature and art, our fathers gave, in England, to dynastic and constitutional squabbles, and to religious broils. The Renaissance in England, and chiefly in Oxford, was like a bitter and changeful spring. There was an hour of genial warmth, there breathed a wind from the south, in the lifetime of Chaucer; then came frosts and storms; again the brief sunshine of court favour shone on literature for a while, when Henry VIII. encouraged study, and Wolsey and Fox founded Christ Church and Corpus Christi College, once more the bad days of religious strife returned, and the promise of learning was destroyed. Thus the chief result of the awakening thought of the fourteenth century in England was not a lively delight in literature, but the appearance of the Lollards. The intensely practical genius of our race turned, not to letters, but to questions about the soul and its future, about property and its distribution. The Lollards were put down in Oxford; 'the tares were weeded out' by the House of Lancaster, and in the process the germs of free thought, of originality, and of a rational education, were destroyed. 'Wyclivism did domineer among us,' says Wood; and, in fact, the intellect of the University was absorbed, like the intellect of France during the heat of the Jansenist controversy, in defending or assailing '267 damned conclusions,' drawn from the books of Wyclife. The University 'lost many of her children through the profession of Wyclivism.'"—A. Lang, *Oxford, ch. 3.*

—**Colet and St. Paul's School.**—Dr. John Colet, appointed Dean of St. Paul's in 1505, "resolved, whilst living and in health, to devote his patrimony to the foundation of a school in St. Paul's Churchyard, wherein 153 children, without any restriction as to nation or country, who could already read and write, and were of 'good parts and capacities,' should receive a sound Christian education. The 'Latin adulterate, which ignorant blind fools brought into this world,' poisoning thereby 'the old Latin speech, and the very Roman tongue used in the time of Tully and Sallust, and Virgil and Terence, and learned by St. Jerome, St. Ambrose, and St. Augustine,'—all that 'abusion which the later blind world brought in, and which may rather be called Blotterature than Literature,'—should be 'utterly abanished and excluded' out of this school. The children should be taught good literature, both Latin and Greek, 'such authors that have with wisdom joined pure chaste eloquence'—'specially Christian authors who wrote their wisdom in clean and chaste Latin, whether in prose or verse; for,' said Colet, 'my intent is by this school specially to increase knowledge, and worshipping of God and Our Lord Jesus Christ, and good Christian life and manners in the children.' . . . The building consisted of one large room, divided into an upper and lower school by a curtain, which could be drawn at pleasure; and the charge of the two schools devolved upon a high-master and a sub-master respectively. The forms were arranged so as each to seat sixteen boys, and were provided each with a raised desk, at which the head-boy sat as president. The building also embraced an entrance-porch and a little chapel for divine service. Dwelling-

houses were erected, adjoining the school, for the residence of the two masters; and for their support, Colet obtained, in the spring of 1510, a royal license to transfer to the Wardens and Guild of Mercers in London, real property to the value of £53 per annum (equivalent to at least £530 of present money). Of this the head-master was to receive as his salary £35 (say £350) and the under-master £18 (say £180) per annum. Three or four years after, Colet made provision for a chaplain to conduct divine service in the chapel, and to instruct the children in the Catechism, the Articles of the faith, and the Ten Commandments,—in English; and ultimately, before his death, he appears to have increased the amount of the whole endowment to £122 (say £1,200) per annum. So that it may be considered, roughly, that the whole endowment, including the buildings, cannot have represented a less sum than £30,000 or £40,000 of present money. And if Colet thus sacrificed so much of his private fortune to secure a liberal (and it must be conceded his was a liberal) provision for the remuneration of the masters who should educate his 153 boys, he must surely have had deeply at heart the welfare of the boys themselves. And, in truth, it was so. Colet was like a father to his schoolboys. . . . It was not to be expected that he should find the school-books of the old grammarians in any way adapted to his purpose. So at once he set his learned friends to work to provide him with new ones. The first thing wanted was a Latin Grammar for beginners. Linacre undertook to provide this want, and wrote with great pains and labour, a work in six books, which afterwards came into general use. But when Colet saw it, at the risk of displeasing his friend, he put it altogether aside. It was too long and too learned for his 'little beginners.' So he condensed within the compass of a few pages two little treatises, an 'Accidence' and a 'Syntax,' in the preface to the first of which occur the gentle words quoted above. These little books, after receiving additions from the hands of Erasmus, Lilly, and others, finally became generally adopted and known as Lilly's Grammar. This rejection of his Grammar seems to have been a sore point with Linacre, but Erasmus told Colet not to be too much concerned about it. . . . Erasmus, in the same letter in which he spoke of Linacre's rejected Grammar . . . put on paper his notions of what a schoolmaster ought to be, and the best method of teaching boys, which he fancied Colet might not altogether approve, as he was wont somewhat more to despise rhetoric than Erasmus did. He stated his opinion that—"In order that the teacher might be thoroughly up to his work, he should not merely be a master of one particular branch of study. He should himself have travelled through the whole circle of knowledge. In philosophy he should have studied Plato and Aristotle, Theophrastus and Plotinus; in Theology the Sacred Scriptures, and after them Origen, Chrysostom, and Basil among the Greek fathers, and Ambrose and Jerome among the Latin fathers; and among the poets, Homer and Ovid; in geography, which is very important in the study of history, Pomponius Mela, Ptolemy, Pliny, Strabo. He should know what ancient names of rivers, mountains, countries, cities, answer to the modern ones; and the same of trees, animals, instruments, clothes, and

gems, with regard to which it is incredible how ignorant even educated men are. He should take note of little facts about agriculture, architecture, military and culinary arts, mentioned by different authors. He should be able to trace the origin of words, their gradual corruption in the languages of Constantinople, Italy, Spain, and France. Nothing should be beneath his observation which can illustrate history or the meaning of the poets. But you will say what a load you are putting on the back of the poor teacher! It is so; but I burden the one to relieve the many. I want the teacher to have traversed the whole range of knowledge, that it may spare each of his scholars doing it. A diligent and thoroughly competent master might give boys a fair proficiency in both Latin and Greek, in a shorter time and with less labour than the common run of pedagogues take to teach their babble.' On receipt of this . . . Colet wrote to Erasmus: . . . "What! I shall not approve!" So you say! What is there of Erasmus's that I do not approve?"—F. Seeböhm, *The Oxford Reformers*, ch. 6.—Ascham and "The Scholmaster."—Roger Ascham, the friend of Lady Jane Grey and the tutor of Queen Elizabeth, was born in 1515, and died in 1568. "It was partly with the view to the instruction of his own children, that he commenced the 'Schol-master,' the work by which he is most and best known, to which he did not live to set the last hand. He communicated the design and import of the book in a letter to Sturmius, in which he states, that not being able to leave his sons a large fortune, he was resolved to provide them with a preceptor, not one to be hired for a great sum of money, but marked out at home with a homely pen. In the same letter he gives his reasons for employing the English language, the capabilities of which he clearly perceived and candidly acknowledged, a high virtue for a man of that age, who perhaps could have written Latin to his own satisfaction much more easily than his native tongue. But though the benefit of his own offspring might be his ultimate object, the immediate occasion of the work was a conversation at Cecil's, at which Sir Richard Sackville expressed great indignation at the severities practiced at Eton and other great schools, so that boys actually ran away for fear of merciless flagellation. This led to the general subject of school discipline, and the defects in the then established modes of tuition. Ascham coinciding with the sentiments of the company, and proceeding to explain his own views of improvement, Sackville requested him to commit his opinions to paper and the 'Schol-master' was the result. It was not published till 1670. . . . We . . . quote a few passages, which throw light upon the author's good sense and good nature. To all violent coercion, and extreme punishment, he was decidedly opposed:—"I do agree," says he, "with all good school-masters in all these points, to have children brought to good perfectness in learning, to all honesty in manners; to have all faults rightly amended, and every vice severely corrected, but for the order and way that leadeth rightly to these points, we somewhat differ." 'Love is better than fear, gentleness than beating, to bring up a child rightly in learning.' 'I do assure you there is no such whetstone to sharpen a good wit, and encourage a will to learning, as is praise.' . . .

'The scholar is commonly beat for the making, when the master were more worthy to be beat for the mending, or rather marring, of the same; the master many times being as ignorant as the child what to say properly and fitly to the matter.' . . . 'This will I say, that even the wisest of your great beaters do as oft punish nature as they do correct faults. Yea many times the better nature is the sorer punished. For if one by quickness of wit take his lesson readily, another by hardness of wit taketh it not so speedily; the first is always commended, the other is commonly punished, when a wise school-master should rather discreetly consider the right disposition of both their natures, and not so much weigh what either of them is able to do, as what either of them is likely to do hereafter. For this I know, not only by reading of books in my study, but also by experience of life abroad in the world, that those which be commonly the wisest, the best learned, and best men also, when they be old, were never commonly the quickest of wit when they were young. Quick wits commonly be apt to take, unapt to keep. Some are more quick to enter speedily than be able to pierce far, even like unto oversharpe tools, whose edges be very soon turned.'—H. Coleridge, *Biographia Literaria*, pp. 328-330.

Jesuit Teaching and Schools.—"The education of youth is set forth in the Formula of Approval granted by Paul III. in 1540," to the plans of Ignatius Loyola for the foundation of the Society of Jesus, "as the first duty embraced by the new Institute. . . . Although the new religious were not at once able to begin the establishment of colleges, yet the plan of those afterwards founded, was gradually ripening in the sagacious mind of St. Ignatius, who looked to these institutions as calculated to oppose the surest bulwarks against the progress of heresy. The first regular college of the Society was that established at Gandia in 1546, through the zeal of St. Francis Borgia, third General of the Society; and the regulations by which it was governed, and which were embodied in the constitutions, were extended to all the Jesuit colleges afterwards founded. The studies were to include theology, both positive and scholastic, as well as grammar, poetry, rhetoric, and philosophy. The course of philosophy was to last three years, that of theology four; and the Professors of Philosophy were enjoined to treat their subject in such a way as to dispose the mind for the study of theology, instead of setting up faith and reason in opposition to one another. The theology of St. Thomas, and the philosophy of Aristotle, were to be followed, except on those points where the teaching of the latter was opposed to the Catholic faith."—A. T. Drane, *Christian Schools and Scholars*, p. 708.—"As early as the middle of the sixteenth century . . . [the Society of Jesus] had several colleges in France, particularly those of Billom, Mauriac, Rodez, Tournon, and Pamiers. In 1561 it secured a footing in Paris, notwithstanding the resistance of the Parliament, of the university, and of the bishops themselves. A hundred years later it counted nearly fourteen thousand pupils in the province of Paris alone. The college of Clermont, in 1651, enrolled more than two thousand young men. The middle and higher classes assured to the colleges of the society an ever-increasing membership. At the end of the seventeenth century,

the Jesuits could inscribe on the roll of honor of their classes a hundred illustrious names, among others those of Condé and Luxembourg, Fléchier and Bossuet, Lamoignon and Séguier, Descartes, Corneille, and Molière. In 1710 they controlled six hundred and twelve colleges and a large number of universities. They were the real masters of education, and they maintained this educational supremacy till the end of the eighteenth century. Voltaire said of these teachers: 'The Fathers taught me nothing but Latin and nonsense.' But from the seventeenth century, opinions are divided, and the encomiums of Bacon and Descartes must be offset by the severe judgment of Leibnitz. 'In the matter of education,' says this great philosopher, 'the Jesuits have remained below mediocrity.' Directly to the contrary, Bacon had written: 'As to whatever relates to the instruction of the young, we must consult the schools of the Jesuits, for there can be nothing that is better done.' . . . A permanent and characteristic feature of the educational policy of the Jesuits is, that, during the whole course of their history, they have deliberately neglected and disdained primary instruction. The earth is covered with their Latin colleges; and wherever they have been able, they have put their hands on the institutions for university education; but in no instance have they founded a primary school. Even in their establishment for secondary instruction, they entrust the lower classes to teachers who do not belong to their order, and reserve to themselves the direction of the higher classes."—G. Compayré, *Hist. of Pedagogy*, pp. 141-143.—See, also, JESUITS: A. D. 1540-1556.—"The Jesuits owed their success partly to the very narrow task which they set themselves, little beyond the teaching of Latin style, and partly to the careful training which they gave their students, a training which often degenerated into mere mechanical exercise. But the mainspring of their influence was the manner in which they worked the dangerous force of emulation. Those pupils who were most distinguished at the end of each month received the rank of prætor, censor, and decurion. The class was divided into two parts, called Romans and Carthaginians, Greeks and Trojans. The students sat opposite each other, the master in the middle, the walls were hung with swords, spears and shields which the contending parties carried off in triumph as the prize of victory. These pupils' contests wasted a great deal of time. The Jesuits established public school festivals, at which the pupils might be exhibited, and the parents flattered. They made their own school books, in which the requirements of good teaching were not so important as the religious objects of the order. They preferred extracts to whole authors; if they could not prune the classics to their fancy they would not read them at all. What judgment are we to pass on the Jesuit teaching as a whole? It deserves praise on two accounts. First, it maintained the dignity of literature in an age which was too liable to be influenced by considerations of practical utility. It maintained the study of Greek in France at a higher level than the University, and resisted the assaults of ignorant parents on the fortress of Hellenism. Secondly, it seriously set itself to understand the nature and character of the individual pupil, and to suit the manner of education to the mind that was to receive it. Whatever

may have been the motives of Jesuits in gaining the affections, and securing the devotion of the children under their charge; whether their desire was to develop the individuality which they probed, or to destroy it in its germ, and plant a new nature in its place; it must be admitted that the loving care which they spent upon their charge was a new departure in education, and has become a part of every reasonable system since their time. Here our praise must end. . . . They amused the mind instead of strengthening it. They occupied in frivolities such as Latin verses the years which they feared might otherwise be given to reasoning and the acquisition of solid knowledge. . . . Celebrated as the Jesuit schools have been, they have owed much more to the fashion which filled them with promising scholars, than to their own excellence in dealing with their material. . . . They have never stood the test of modern criticism. They have no place in a rational system of modern education."—O. Browning, *Introd. to the Hist. of Educational Theories*, ch. 8.

Modern : European Countries.

Austria.—"The annual appropriations passed by Parliament allow the minister of public instruction \$8,307,774 for all kinds of public educational institutions, elementary and secondary schools, universities, technical and art schools, museums, and philanthropic institutions. Generally, this principle is adhered to by the state, to subsidize the highest institutions of learning most liberally, to share the cost of maintaining secondary schools with church and community, and to leave the burden of maintaining elementary schools almost entirely to the local or communal authorities. . . . In the Austrian public schools no distinctions are made with the pupils as regards their religious confessions. The schools are open to all, and are therefore common schools in the sense in which that term is employed with us. In Prussia it is the policy of the Government to separate the pupils of different religious confessions in . . . elementary, but not to separate them in secondary schools. In Austria and Hungary, special teachers of religion for the elementary and secondary schools are employed; in Prussia this is done only in secondary schools, while religion is taught by the secular teachers in elementary schools. This is a very vital difference, and shows how much nearer the Austrian schools have come to our ideal of a common school."—U. S. Comm'r of Education, *Report*, 1889-90, pp. 465-466.

Belgium.—"The treaty of Paris, of March 30, 1814, fixed the boundaries of the Netherlands, and united Holland and Belgium. In these new circumstances, the system of public instruction became the subject of much difficulty between the Calvinists of the northern provinces and the Catholics of the southern. The government therefore undertook itself to manage the organization of the system of instruction in its three grades. . . . William I. desired to free the Belgians from French influence, and with this object adopted the injudicious measure of attempting to force the Dutch language upon them. He also endeavored to familiarize them with Protestant ideas, and to this end determined to get the care of religious instruction exclusively into the hands of the state. But the clergy were energetic in asserting their rights; the boldness of the Belgian

deputies to the States-General increased daily; and the project for a system of public and private instruction which was laid before the second chamber on the 26th November, 1829, was very unfavorably received by the Catholics. The government very honorably confessed its error by repealing the obnoxious ordinances of 1825. But it was too late, and the Belgian provinces were lost to Holland. On the 12th October, 1830, the provisory government repealed all laws restricting the freedom of instruction." [For some particulars of the later history of the educational conflict in Belgium, see NETHERLANDS: A. D. 1830-1881 — *Public Instruction in Belgium* (Barnard's *American Journal of Education*, v. 8, p. 582.)

Denmark.—"Denmark has long been noted for the excellence of her schools. . . . The perfection and extension of the system of popular instruction date from the beginning of the eighteenth century, when Bishop Thestrup, of Aalborg, caused 6 parish schools to be established in Copenhagen and when King Frederick IV. (1699-1730) had 240 school-houses built. . . . Christian VI. (1730-1746), . . . ordained in 1739 the establishment of common or parish schools in every town and in every larger village. The branches of instruction were to be religion, reading, writing, and arithmetic. No one was to be allowed to teach unless he had shown himself qualified to the satisfaction of the clergyman of the parish. . . . Many difficulties, however (especially the objections of the landed proprietors, who had their own schools on their estates), hindered the free development of the common school system, and it was not until 1814 that a new and more favorable era was inaugurated by the law of July 29 of that year. According to this law the general control of the schools is in the hands of a minister of public instruction and subordinate superintendents for the several departments of the kingdom."—*Education in Denmark* (U. S. Bureau of Education, *Circulars of Information*, 1877, no. 2), pp. 40-41.—"With a population in 1890 of 2,185,157, the pupils enrolled in city and rural schools in Denmark numbered 231,940, or about 10 per cent. of the population receiving the foundation of an education. In 1881 the illiterates to 100 recruits numbered 0.36; in Sweden at that date, the per cent. was 0.39."—U. S. Comm'r of Education, *Report*, 1889-90, p. 523.

England: Oxford and Cambridge.—"Oxford and Cambridge, as establishments for education, consist of two parts — of the University proper, and of the Colleges. The former, original and essential, is founded, controlled, and privileged by public authority, for the advantage of the nation. The latter, accessory and contingent, are created, regulated, and endowed by private munificence, for the interest of certain favored individuals. Time was, when the Colleges did not exist, and the University was there; and were the Colleges again abolished, the University would remain entire. The former, founded solely for education, exists only as it accomplishes the end of its institution; the latter, founded principally for aliment and habitation, would still exist, were all education abandoned within their walls. The University, as a national establishment, is necessarily open to the lieges in general; the Colleges, as private institutions, might universally do, as some have actually done — close their gates upon all, except their foundation members. The Uni-

versities and Colleges are thus neither identical, nor vicarious of each other. If the University ceases to perform its functions, it ceases to exist; and the privileges accorded by the nation to the system of public education legally organized in the University, can not, without the consent of the nation — far less without the consent of the academical legislature — be lawfully transferred to the system of private education precariously organized in the Colleges, and over which neither the State nor the University have any control. They have, however, been unlawfully usurped. Through the suspension of the University, and the usurpation of its functions and privileges by the Collegial bodies, there has arisen the second of two systems, diametrically opposite to each other. — The one, in which the University was paramount, is ancient and statutory; the other, in which the Colleges have the ascendant, is recent and illegal. — In the former, all was subservient to public utility, and the interests of science; in the latter, all is sacrificed to private monopoly, and to the convenience of the teacher. . . . In the original constitution of Oxford, as in that of all the older Universities of the Parisian model, the business of instruction was not confided to a special body of privileged professors. The University was governed, the University was taught, by the graduates at large. Professor, Master, Doctor, were originally synonymous. Every graduate had an equal right of teaching publicly in the University the subjects competent to his faculty, and to the rank of his degree; nay, every graduate incurred the obligation of teaching publicly, for a certain period, the subjects of his faculty, for such was the condition involved in the grant of the degree itself."—Sir Wm. Hamilton, *Discussions on Philosophy and Literature, etc.*: *Education*, ch. 4.

England: The "Great Public Schools."—"What is a public school in England? "The question is one of considerable difficulty. To some extent, however, the answer has been furnished by the Royal Commission appointed in 1861 to inquire into the nature and application of the endowments and revenues, and into the administration and management of certain specified colleges and schools commonly known as the Public Schools Commission. Nine are named in the Queen's letter of appointment, viz., Eton, Winchester, Westminster, the Charterhouse, St. Paul's, Merchant Taylors', Harrow, Rugby, and Shrewsbury. The reasons probably which suggested this selection were, that the nine named foundations had in the course of centuries emerged from the mass of endowed grammar-schools, and had made for themselves a position which justified their being placed in a distinct category, and classed as 'public schools.' It will be seen as we proceed that all these nine have certain features in common, distinguishing them from the ordinary grammar-schools which exist in almost every country town in England. Many of these latter are now waking up to the requirements of the new time and following the example of their more illustrious sisters. The most notable examples of this revival are such schools as those at Sherborne, Giggleswick, and Tunbridge Wells, which, while remodelling themselves on the lines laid down by the Public Schools Commissioners, are to some extent providing a training more adapted to the means and requirements of our middle classes in the nineteenth century than can

be found at any of the nine public schools. But twenty years ago the movement which has since made such astonishing progress was scarcely felt in quiet country places like these, and the old endowments were allowed to run to waste in a fashion which is now scarcely credible. The same impulse which has put new life into the endowed grammar-schools throughout England has worked even more remarkably in another direction. The Victorian age bids fair to rival the Elizabethan in the number and importance of the new schools which it has founded and will hand on to the coming generation. Marlborough, Haileybury, Uppingham, Rossall, Clifton, Cheltenham, Radley, Malvern, and Wellington College, are nine schools which have taken their place in the first rank. . . . In order, then, to get clear ideas on the general question, we must keep these three classes of schools in mind—the nine old foundations recognized in the first instance by the Royal Commission of 1861; the old foundations which have remained local grammar-schools until within the last few years, but are now enlarging their bounds, conforming more or less to the public-school system, and becoming national institutions; and, lastly, the modern foundations which started from the first as public schools, professing to adapt themselves to the new circumstances and requirements of modern English life. The public schools of England fall under one or other of these categories. . . . We may now turn to the historic side of the question, dealing first, as is due to their importance, with the nine schools of our first category. The oldest, and in some respects most famous of these, is Winchester School, or, as it was named by its founder William of Wykeham, the College of St. Mary of Winchester, founded in 1382. Its constitution still retains much of the impress left on it by the great Bishop of the greatest Plantagenet King, five centuries ago. Toward the end of the fourteenth century Oxford was already the center of English education, but from the want of grammar-schools boys went up by hundreds untaught in the simplest rudiments of learning, and when there lived in private hostels or lodging-houses, in a vast throng, under no discipline, and exposed to many hardships and temptations. In view of this state of things, William of Wykeham founded his grammar-school at Winchester and his college at Oxford, binding the two together, so that the school might send up properly trained scholars to the university, where they would be received at New College, in a suitable academical home, which should in its turn furnish governors and masters for the school. . . . Next in date comes the royal foundation of Eton, or 'The College of the Blessed Mary of Eton, near Windsor.' It was founded by Henry VI., A. D. 1446, upon the model of Winchester, with a collegiate establishment of a provost, ten fellows (reduced to seven in the reign of Edward IV.), seventy scholars, and ten chaplains (now reduced to two, who are called 'conducts'), and a head and lower master, ten lay clerks, and twelve choristers. The provost and fellows are the governing body, who appoint the head master. . . . Around this center the great school, numbering now a thousand boys, has gathered, the college, however, still retaining its own separate organization and traditions. Besides the splendid buildings and playing-fields at Eton, the college holds real property of the yearly

value of upward of £20,000, and forty livings ranging from £100 to £1,200 of yearly value. . . . The school next in date stands out in sharp contrast to Winchester and Eton. It is St. Paul's School, founded by Dean Colet. . . . Shrewsbury School, which follows next in order of seniority, claims a royal foundation, but is in reality the true child of the town's folk. The dissolution of the monasteries destroyed also the seminaries attached to many of them, to the great injury of popular education. This was specially the case in Shropshire, so in 1551 the bailiffs, burgesses, and inhabitants of Shrewsbury and the neighborhood petitioned Edward VI. for a grant of some portion of the estates of the dissolved collegiate churches for the purpose of founding a free school. The King consented, and granted to the petitioners the appropriated tithes of several livings and a charter, but died before the school was organized. It was in abeyance during Mary's reign, but opened in the fourth year of Elizabeth, 1562, by Thomas Aston. . . . We have now reached the great group of Elizabethan schools, to which indeed Shrewsbury may also be said to belong, as it was not opened until the Queen had been three years on the throne. The two metropolitan schools of Westminster and Merchant Taylors' were in fact founded in 1560, two years before the opening of Shrewsbury. Westminster as a royal foundation must take precedence. It is a grammar-school attached by the Queen to the collegiate church of St. Peter, commonly called Westminster Abbey, and founded for the free education of forty scholars in Latin, Greek, and Hebrew. The Queen, with characteristic thriftiness, provided no endowment for her school, leaving the cost of maintenance as a charge on the general revenues of the dean and chapter, which indeed were, then as now, fully competent to sustain the burden. . . . Merchant Taylors', the other metropolitan school founded in 1560, owes its origin to Sir Thomas White, a member of the Court of Assistants of the company, and founder of St. John's College, Oxford. It was probably his promise to connect the school with his college which induced the Company to undertake the task. . . . Sir Thomas White redeemed his promise by endowing the school with thirty-seven fellowships at St. John's College. . . . Rugby, or the free school of Lawrence Sheriff, follows next in order, having been founded in 1567 by Lawrence Sheriff, grocer, and citizen of London. His 'intent' (as the document expressing his wishes is called) declares that his lands in Rugby and Brownsover, and his 'third of a pasture-ground in Gray's Inn Fields, called Conduit Close,' shall be applied to maintain a free grammar school for the children of Rugby and Brownsover, and the places adjoining, and four poor almsmen of the same parishes. These estates, after providing a fair schoolhouse and residences for the master and almsmen, at first produced a rental of only £24 13s. 4d. In due time, however, Conduit Close became a part of central London, and Rugby School the owner of eight acres of houses in and about the present Lamb's Conduit Street. The income of the whole trust property amounts now to about £6,000, of which £255 is expended on the maintenance of the twelve almsmen. . . . Harrow School was founded in 1571, four years later than Rugby, by John Lyon, a yeoman of the parish. He was owner of certain small estates in and about Har-

row and Barnet, and of others at Paddington and Kilburn. All these he devoted to public purposes, but unfortunately gave the former for the perpetual education of the children and youth of the parish, and the latter for the maintenance and repair of the highways from Harrow and Edgware to London. The present yearly revenue of the school estates is barely over £1,000, while that of the highway trust is nearly £4,000. But, though the poorest in endowments, Harrow, from its nearness to London, and consequent attractions for the classes who spend a large portion of their year in the metropolis either in attendance in Parliament, or for pleasure, has become the rival of Eton as a fashionable school. . . . Last on the list of the nine schools comes the Charterhouse (the Whitefriars of Thackeray's novels). It may be fairly classed with the Elizabethan schools, though actually founded in 1609, after the accession of James I. In that year a substantial yeoman, Thomas Sutton by name, purchased from Lord Suffolk the lately dissolved Charterhouse, by Smithfield, and obtained letters patent empowering him to found a hospital and school on the old site."—T. Hughes, *The Public Schools of England* (*N. Am. Rev.*, April, 1879).—**Fagging.**—"In rougher days it was found, that in large schools the stronger and larger boys reduced the smaller and weaker to the condition of Helots. Here the authorities stepped in, and despairing of eradicating the evil, took the power which mere strength had won, and conferred it upon the seniors of the school—the members, that is, of the highest form or forms. As in those days, promotion was pretty much a matter of rotation, every one who remained his full time at the school, was pretty sure to reach in time the dominant class, and the humblest fag looked forward to the day when he would join the ranks of the ruling aristocracy. Meantime he was no longer at the beck of any stronger or ruder classfellow. His 'master' was in theory, and often in practice, his best protector: he imposed upon him very likely what may be called menial offices—made him carry home his 'Muse'—field for him at cricket—brush his coat; if we are to believe school myths and traditions, black his shoes, and even take the chill off his sheets. The boy, however, saw the son of a Howard or a Percy similarly employed by his side, and in cheerfully submitting to an ancient custom, he was but following out the tendencies of the age and class to which he belonged. . . . The mere abolition of the right of fagging, vague and undefined as were the duties attached to it, would have been a loss rather than a gain to the oppressed as a class. It would merely have substituted for the existing law, imperfect and anomalous as that law might be, the licence of brute force and the dominion of boyish truculence. . . . Such was, more or less, the state of things when he to whom English education owes so incalculable a debt, was placed at the head of Rugby School. . . . It was hoped that he who braved the anger of his order by his pamphlet on Church Reform—at whose bold and uncompromising language bishops stood aghast and courtly nobles remonstrated in vain—would make short work of ancient saws and mediæval traditions—that a revolution in school life was at hand. And they were not mistaken. . . . What he did was to seize on the really valuable part of the existing system—to inspire it with that new life, and

those loftier purposes, without which mere institutions, great or small, must, sooner or later, wither away and perish. His first step was to effect an important change in the actual machinery of the school—one which, in itself, amounted to a revolution. The highest form in the school was no longer open to all whom a routine promotion might raise in course of time to its level. Industry and talent as tested by careful examinations (in the additional labour of which he himself bore the heaviest burden), were the only qualifications recognised. The new-modelled 'sixth form' were told, that the privileges and powers which their predecessors had enjoyed for ages were not to be wrested from them; but that they were to be held for the common good, as the badges and instruments of duties and responsibilities, such as any one with less confidence in those whom he addressed would have hesitated to impose. They were told plainly that without their co-operation there was no hope of keeping in check the evils inherent in a society of boys. Tyranny, falsehood, drinking, party-spirit, coarseness, selfishness—the evil spirits that infest schools—these they heard Sunday after Sunday put in their true light by a majestic voice and a manly presence, with words, accents, and manner which would live in their memory for years; but they were warned that, to exorcise such spirits, something more was needed than the watchfulness of masters and the energy of their chief. They themselves must use their large powers, entrusted to them in recognition of the principle, or rather of the fact, that in a large society of boys some must of necessity hold sway, to keep down, in themselves and those about them, principles and practices which are ever ready, like hideous weeds, to choke the growth of all that is fair and noble in such institutions. Dr. Arnold persevered in spite of opposition, obloquy, and misrepresentation. . . . But he firmly established his system, and his successors, men differing in training and temperament from himself and from each other, have agreed in cordially sustaining it. His pupils and theirs, men in very different walks of life, filling honourable posts at the universities and public schools, or ruling the millions of India, or working among the blind and toiling multitudes of our great towns, feel daily how much of their usefulness and power they owe to the sense of high trust and high duty which they imbibed at school."—*Our Public Schools—Their Discipline and Instruction* (*Fraser's Magazine*, v. 1, pp. 407–409).

England: A. D. 1699–1870.—The rise of Elementary Schools.—"The recognition by the English State of its paramount duty in aiding the work of national education is scarcely more than a generation old. The recognition of the further and far more extensive work of supplementing by State aid, or by State agency, all deficiencies in the supply of schools, dates only thirteen years back [to 1870]; while the equally pressing duty of enforcing, by a universal law, the use of the opportunities of education thus supplied, is a matter almost of yesterday. The State has only slowly stepped into its proper place; more slowly in the case of England than in the case of any other of the leading European nations. . . . In 1699 the Society for the Propagation of Christian Knowledge was founded, and by it various schools were established throughout the country. In 1782 Robert Raikes established his first Sun-

day school, and in a few years the Union, of which he was the founder, had under its control schools scattered all over the country. But the most extensive efforts made for popular education were those of Andrew Bell and Joseph Lancaster towards the close of the eighteenth century. . . . They misconceived and misjudged the extent of the work that had to be accomplished. They became slaves to their system—that which was called the Monitorial system . . . and by elevating it to undue importance they did much to discredit the very work in which they were engaged. . . . Amongst the Nonconformist followers of Lancaster there arose the British and Foreign School Society; while by those of Bell there was established, on the side representing the Church, the National Society. The former became the recognised agency of the Dissenters, the latter of the Church; and through one or other of these channels State aid, when it first began to flow, was obliged to take its course. . . . In 1802 the first Sir Robert Peel passed a Bill which restricted children's labour in factories, and required that reading, writing, and arithmetic should be taught to them during a part of each day. This was the beginning of the factory legislation. . . . In 1807 Mr. Whitebread introduced a Bill for the establishment of parochial schools through the agency of local vestries, who were empowered to draw on the rates for the purpose. The House of Commons accepted the Bill, but it was thrown out in the House of Lords. . . . The movement for a State recognition of education was pressed more vigorously when the fears and troubles of European war were clearing away. It was in 1816 that Brougham obtained his Select Committee for Inquiring into the Education of the Poor in the Metropolis. . . . In 1820 Brougham introduced, on the basis of his previous inquiries, an Education Bill. . . . By this Bill the issue between the contending parties in the State, which was henceforward destined to be the chief stumbling-block in the way of a State education, was placed on a clear and well-defined basis. . . . The Church was alarmed at anything which seemed to trench upon what she naturally thought to be her appointed task. The Dissenters dreaded what might add to the impregnability of the Church's strongholds. . . . When the beginning was actually made it came . . . as an almost unnoticed proposal of the Executive. In 1832 the sum of £20,000 for public education was placed in the estimates; it was passed by the Committee of Supply; and the first step was taken on that course from which the State has never since drawn back. No legislation was necessary. . . . The next great step was taken in 1839, when the annual vote was increased from £20,000 to £30,000, and when a special department was created to supervise the work. Hitherto grants had been administered by the Treasury to meet a certain amount of local exertion, and in general reliance upon vague assurances as to maintenance of the schools by local promoters. . . . The conditions which were soon found to be necessary as securities, either for continuance or for efficiency, were not yet insisted upon. To do this it was necessary to have a Department specially devoted to this work; and the means adopted for creating such a Department was one which had the advantage of requiring no Act of Parliament. By an Order in Council a Special Committee of the

Privy Council was established, and, in connection with this Committee, a special staff of officers was engaged. The same year saw the appointment of the first inspectors of schools. It was thus that the Education Department was constituted. The plan which the advisers of the Government in this new attempt had most at heart was that of a Normal Training College for teachers. . . . But it was surrounded with so much matter for dispute, gathered during a generation of contention, that the proposal all but wrecked the Government of Lord Melbourne. The Church objected to the scheme. . . . In the year 1844, after five years of the new administration, it was possible to form some estimate, not only of the solid work accomplished, but of the prospects of the immediate future. . . . Between 1839 and 1844, under the action of the Committee of Council, £170,000 of Imperial funds had been distributed to meet £430,000 from local resources. In all, therefore, about one million had been spent in little more than ten years. What solid good had this accomplished? . . . According to a careful and elaborate report in the year 1845, only about one in six, even of the children at school, was found able to read the Scriptures with any ease. Even for these the power of reading often left them when they tried a secular book. Of reading with intelligence there was hardly any; and about one-half of the children who came to school left, it was calculated, unable to read. Only about one child in four had mastered, even in the most mechanical way, the art of writing. As regards arithmetic, not two per cent. of the children had advanced as far as the rule of three. . . . The teaching of the schools was in the hands of men who had scarcely any training, and who had often turned to the work because all other work had turned away from them. Under them it was conducted upon that monitorial system which was the inheritance from Dr. Bell, the rival of Lancaster. The pupils were set to teach one another. . . . The inquiries of the Committee of Council thus gave the death-blow, in public estimation, to the once highly-vaunted monitorial system. But how was it to be replaced? The model of a better state of things was found in the Dutch schools. There a selected number of the older pupils, who intended to enter upon the profession of teachers, were apprenticed, when they had reached the age of thirteen, to the teacher. . . . After their apprenticeship they passed to a Training College. . . . Accordingly, a new and important start was made by the Department on the 25th of August 1846. . . . In 1851 twenty-five Training Colleges had been established; and these had a sure supply of qualified recruits in the 6,000 pupil teachers who were by that time being trained to the work. . . . The ten years between 1842 and 1852 saw the Parliamentary grant raised from £40,000 to £160,000 a year, with the certainty of a still further increase as the augmentation grants to teachers and the stipends to pupil teachers grew in number. Nearly 3,800 schools had been built with Parliamentary aid, providing accommodation for no less than 540,000 children. The State had contributed towards this more than £400,000; and a total expenditure had been incurred in providing schools of more than £1,000,000. . . . But the system was as yet only tentative; and a mass of thorny religious questions had to be faced before a really national system could be established.

. . . All parties became convinced that the first step was to inquire into the merits and defects of the existing system, and on the basis of sound information to plan some method of advance. Under this impression it was that the Commission on Public Education, of which the Duke of Newcastle was chairman, was appointed in 1858." The result of the Commission of 1858 was a revision of the educational Code which the Committee of the Privy Council had formulated. The New Code proved unsatisfactory in its working, and every year showed more plainly the necessity of a fully organized system of national education. "Out of the discussions there arose two societies, which fairly expressed two different views. . . . The first of these was the Education League, started at Birmingham in 1869. . . . Its basis, shortly stated, was that of a compulsory system of school provision, by local authorities through means of local rates; the schools so provided to be at once free and unsectarian. . . . In this programme the point which raised most opposition was the unsectarian teaching. It was chiefly to counteract this part of the League's objects that there was formed the Education Union, which urged a universal system based upon the old lines. . . . By common consent the time for a settlement was now come. Some guarantee must be taken that the whole edifice should not crumble to pieces; that for local agencies there should be substituted local authorities; and that the State should be supplied with some machinery whereby the gaps in the work might be supplied. It was in this position of opinion that Mr. Forster, as Vice-President, introduced his Education Bill in 1870. . . . The measure passed the House of Lords without any material alteration; and finally became Law on the 9th of August 1870."—H. Craik, *The State in its Relation to Education*.—The schools to which the provisions of the Act of 1870 extends, and the regulations under which such schools are to be conducted, are defined in the Act as follows: "Every elementary school which is conducted in accordance with the following regulations shall be a public elementary school within the meaning of this Act; and every public elementary school shall be conducted in accordance with the following regulations (a copy of which regulations shall be conspicuously put up in every such school); namely (1.) It shall not be required, as a condition of any child being admitted into or continuing in the school, that he shall attend or abstain from attending any Sunday school, or any place of religious worship, or that he shall attend any religious observance or any instruction in religious subjects in the school or elsewhere, from which observance or instruction he may be withdrawn by his parent, or that he shall, if withdrawn by his parent, attend the school on any day exclusively set apart for religious observance by the religious body to which his parent belongs: (2.) The time or times during which any religious observance is practised or instruction in religious subjects is given at any meeting of the school shall be either at the beginning or at the end or at the beginning and the end of such meeting, and shall be inserted in a time-table to be approved by the Education Department, and to be kept permanently and conspicuously affixed in every school-room; and any scholar may be withdrawn by his parent from such observance or instruction with-

out forfeiting any of the other benefits of the school: (3.) The school shall be open at all times to the inspection of any of Her Majesty's inspectors, so, however, that it shall be no part of the duties of such inspector to inquire into any instruction in religious subjects given at such school, or to examine any scholar therein in religious knowledge or in any religious subject or book: (4.) The school shall be conducted in accordance with the conditions required to be fulfilled by an elementary school in order to obtain an annual parliamentary grant."—J. H. Rigg, *National Education*, app. A.—"The new Act retained existing inspected schools, . . . it also did away with all denominational classifications of schools and with denominational inspection, treating all inspected schools as equally belonging to a national system of schools and under national inspection, the distinctions as to inspectors and their provinces being henceforth purely geographical. But the new Act no longer required that public elementary schools established by voluntary agency and under voluntary management should have in them any religious character or element whatever, whether as belonging to a Christian Church or denomination, or as connected with a Christian philanthropic society, or as providing for the reading of the Scriptures in the school. It was left open to any party or any person to establish purely voluntary schools if they thought fit. But, furthermore, the Act made provision for an entirely new class of schools, to be established and (in part) supported out of local rates, to be governed by locally-elected School Boards, and to have just such and so much religious instruction given in them as the governing boards might think proper, at times preceding or following the prescribed secular school hours, and under the protection of a time-table Conscience Clause, as in the case of voluntary schools, with this restriction only, that in these schools no catechism or denominational religious formulary of any sort was to be taught. The mode of electing members to the School Boards was to be by what is called the cumulative vote—that is, each elector was to have as many votes as there were candidates, and these votes he could give all to one, or else distribute among the candidates as he liked; and all ratepayers were to be electors. . . . The new law . . . made a clear separation, in one respect, between voluntary and Board schools. Both were to stand equally in relation to the National Education Department, under the Privy Council; but the voluntary schools were to have nothing to do with local rates or rate aid, nor Local Boards to have any control over voluntary schools."—J. H. Rigg, *National Education*, ch. 10.—"To sum up . . . in few words what may be set down as the chief characteristics of our English system of Elementary Education, I should say (1) first, that whilst about 30 per cent. of our school accommodation is under the control of school boards, the cost of maintenance being borne in part by local rates as well as by the Parliamentary grant, fully 70 per cent. is still in the hands of voluntary school-managers, whose subscriptions take the place of the rates levied by school boards. (2) In case a deficiency in school accommodation is reported in any school district, the Education Department have the power to require that due provision shall be made for the same within a limited time;

the 'screw' to be applied to wilful defaulters in a voluntary school district being the threat of a board, and in a school board district the supercession of the existing board by a new board, nominated by the Department, and remunerated out of the local rates. (3) Attendance is enforced everywhere by bye-laws, worked either by the school board or by the School Attendance Committee: and although these local authorities are often very remiss in discharging their duties, and the magistrates not seldom culpably lenient in dealing with cases brought before them, there are plenty of districts in which regularity of school attendance has been improved fully 10 per cent. in the past two or three years. . . . (4) The present provision for teachers, and the means, in existence for keeping up the supply, are eminently satisfactory. Besides a large but somewhat diminishing body of apprenticed pupil teachers, there is a very considerable and rapidly increasing number of duly qualified assistants, and at their head a large array of certificated teachers, whose ranks are being replenished, chiefly from the Training Colleges, at the rate of about 2,000 a year. (5) The whole of the work done is examined and judged every year by inspectors and inspectors' assistants organised in districts each superintended by a senior inspector—the total cost of this inspection for the present year being estimated at about £150,000.—Rev. H. Roe, *The Eng. System of Elementary Education* (International Health Exhibition, London, 1884: *Conference on Education, sect. A*).—"The result of the work of the Education Department is causing a social revolution in England. If the character of the teaching is too mechanical, if the chief aim of the teacher is to earn as much money as possible for his managers, it must be remembered that this cannot be done without at least giving the pupil the ability to read and write. Of course the schools are not nearly so good as the friends of true education wish. Much remains to be done. . . . Free education will shortly be an accomplished fact; the partial absorption of the voluntary schools by the School Boards will necessarily follow, and further facilitate the abolition of what have been the cause of so much evil—result examinations, and 'grant payments.' 'Write "Grant factory" on three-fourths of our schools,' said an educator to me. . . . The schools are known as (1) Voluntary Schools, which have been built, and are partly supported by voluntary subscriptions. These are under denominational control. (2) Board Schools: viz., schools built and supported by money raised by local taxation, and controlled by elected School Boards. Out of 4,688,000 pupils in the elementary schools, 2,154,000 are in the schools known as Voluntary, provided by, and under the control of the Church of England; 1,780,000 are in Board Schools; 330,000 attend schools under the British School Society, or other undenominational control; 248,000 are in Roman Catholic schools; and 174,000 belong to Wesleyan schools. The schools here spoken of correspond more nearly than any other in England to the Public School of the United States and Australia; but are in many respects very different, chiefly from the fact that they are provided expressly for the poor, and in many cases are attended by no other class."—W. C. Grasby, *Teaching in Three Continents*, ch. 2.

England: A. D. 1891.—**Attainment of Free Education.**—In 1891, a bill passed Parliament which aims at making the elementary schools of the country free from the payment of fees. The bill as explained in the House of Commons, "proposed to give a grant of 10s. per head to each scholar in average attendance between five and fourteen years of age, and as regarded such children schools would either become wholly free, or would continue to charge a fee reduced by the amount of the grant, according as the fee at present charged did or did not exceed 10s. When a school had become free it would remain free, or when a fee was charged, the fee would remain unaltered unless a change was required for the educational benefit of the locality; and under this arrangement he believed that two-thirds of the elementary schools in England and Wales would become free. There would be no standard limitations, but the grant would be restricted to schools where the compulsory power came in, and as to the younger children, it was proposed that in no case should the fee charged exceed 2d." In a speech made at Birmingham on the free education bill, Mr. Chamberlain discussed the opposition to it made by those who wished to destroy the denominational schools, and who objected to their participation in the proposed extension of public support. "To destroy denominational schools," he said, "was now an impossibility, and nothing was more astonishing than the progress they had made since the Education Act of 1870. He had thought, he said, they would die out with the establishment of Board schools, but he had been mistaken, for in the last twenty-three years they had doubled their accommodation, and more than doubled their subscription list. At the present time they supplied accommodation for two-thirds of the children of England and Wales. That being the case, to destroy voluntary schools—to supply their places with Board schools, as the Daily News cheerfully suggested—would be to involve a capital expenditure of £50,000,000, and £5,000,000 extra yearly in rates. But whether voluntary or denominational schools were good or bad, their continued existence had nothing to do with the question of free education, and ought to be kept quite distinct from it. To make schools free was not to give one penny extra to any denominational endowment. At the present time the fee was a tax, and if the parents did not pay fees they were brought before the magistrates, and if they still did not pay they might be sent to gaol. The only thing the Government proposed to do was not to alter the tax but to alter the incidence. The same amount would be collected; it would be paid by the same people, but it would be collected from the whole nation out of the general taxation." The bill was passed by the Commons July 8, and by the Lords on the 24th of the same month. The free education proposals of the Government are said to have been generally accepted throughout the country by both Board and Voluntary schools.—*Annual Register*, 1891, pp. 128 and 97, and pt. 2, p. 51.

France: A. D. 1565-1802.—**The Jesuits.—Port Royal.—The Revolution.—Napoleon.**—"The Jesuits invaded the province long ruled by the University alone. By that adroit management of men for which they have always been eminent, and by the more liberal spirit of

their methods, they outdid in popularity their superannuated rival. Their first school at Paris was established in 1565, and in 1762, two years before their dissolution, they had eighty-six colleges in France. They were followed by the Port Royalists, the Benedictines, the Oratorians. The Port Royal schools [see PORT ROYAL], from which perhaps a powerful influence upon education might have been looked for, restricted this influence by limiting very closely the number of their pupils. Meanwhile the main funds and endowments for public education in France were in the University's hands, and its administration of these was as ineffective as its teaching. . . . The University had originally, as sources of revenue, the Post Office and the Messageries, or Office of Public Conveyance; it had long since been obliged to abandon the Post Office to Government, when in 1719 it gave up to the same authority the privilege of the Messageries, receiving in return from the State a yearly revenue of 150,000 livres. For this payment, moreover, it undertook the obligation of making the instruction in all its principal colleges gratuitous. Paid or gratuitous, however, its instruction was quite inadequate to the wants of the time, and when the Jesuits were expelled from France in 1764, their establishments closed, and their services as teachers lost, the void that was left was strikingly apparent, and public attention began to be drawn to it. It is well known how Rousseau among writers, and Turgot among statesmen, busied themselves with schemes of education; but the interest in the subject must have reached the whole body of the community, for the instructions of all three orders of the States General in 1789 are unanimous in demanding the reform of education, and its establishment on a proper footing. Then came the Revolution, and the work of reform soon went swimmingly enough, so far as the abolition of the old schools was concerned. In 1791 the colleges were all placed under the control of the administrative authorities; in 1792 the jurisdiction of the University was abolished; in 1793 the property of the colleges was ordered to be sold, the proceeds to be taken by the State; in September of the same year the suppression of all the great public schools and of all the University faculties was pronounced. For the work of reconstruction Condorcet's memorable plan had in 1792 been submitted to the Committee of Public Instruction appointed by the Legislative Assembly. This plan proposed a secondary school for every 4,000 inhabitants; for each department, a departmental institute, or higher school; nine lycées, schools carrying their studies yet higher than the departmental institute, for the whole of France; and to crown the edifice, a National Society of Sciences and Arts, corresponding in the main with the present institute of France. The whole expense of national instruction was to be borne by the State, and this expense was estimated at 29,000,000 of francs. But 1792 and 1793 were years of furious agitation, when it was easier to destroy than to build. Condorcet perished with the Girondists, and the reconstruction of public education did not begin till after the fall of Robespierre. The decrees of the Convention for establishing the Normal School, the Polytechnic, the School of Mines, and the écoles centrales, and then Daunou's law in 1795, bore, however, many traces of Condor-

cet's design. Daunou's law established primary schools, central schools, special schools, and at the head of all the Institute of France, this last a memorable and enduring creation, with which the old French Academy became incorporated. By Daunou's law, also, freedom was given to private persons to open schools. The new legislation had many defects. . . . The country, too, was not yet settled enough for its education to organise itself successfully. The Normal School speedily broke down; the central schools were established slowly and with difficulty; in the course of the four years of the Directory there were nominally instituted ninety-one of these schools, but they never really worked. More was accomplished by private schools, to which full freedom was given by the new legislation, at the same time that an ample and open field lay before them. They could not, however, suffice for the work, and education was one of the matters for which Napoleon, when he became Consul, had to provide. Fourcroy's law, in 1802, took as the basis of its school-system secondary schools, whether established by the communes or by private individuals; the Government undertook to aid these schools by grants for buildings, for scholarships, and for gratuities to the masters; it prescribed Latin, French, geography, history, and mathematics as the instruction to be given in them. They were placed under the superintendence of the prefects. To continue and complete the secondary schools were instituted the lycées; here the instruction was to be Greek and Latin, rhetoric, logic, literature, moral philosophy, and the elements of the mathematical and physical sciences. The pupils were to be of four kinds: boursiers nationaux, scholars nominated to scholarships by the State; pupils from the secondary schools, admitted as free scholars by competition; paying boarders, and paying day-scholars."—M. Arnold, *Schools and Universities on the Continent*, ch. 1.

France : A. D. 1833-1889.—**The present System of Public Instruction.**—"The question of the education of youth is one of those in which the struggle between the Catholic Church and the civil power has been, and still is, hottest. It is also one of those in which France, which for a long time had remained far in the rear, has made most efforts, and achieved most progress in these latter years. . . . Napoleon I. conceived education as a means of disciplining minds and wills and moulding them into conformity with the political system which he had put in force; accordingly he gave the University the monopoly of public education. Apart from the official system of teaching, no competition was allowed except that specially authorised, regulated, and controlled by the State itself. Religious instruction found a place in the official programmes, and members of the clergy were even called on to supply it, but this instruction itself, and these priests themselves, were under the authority of the State. Hence two results: on the one hand the speedy impoverishment of University education, . . . on the other hand, the incessant agitation of all those who were prevented by the special organisation given to the University from expounding their ideas or the faith that was in them from the professorial chair. This agitation was begun and carried on by the Catholic Church itself, as soon as it felt more at liberty to let its ambitions be discerned. On this point the

Church met with the support of a good number of Liberals, and it is in a great measure to its initiative that are due the three important laws of 1833, 1850, and 1875, which have respectively given to France freedom of primary education, of secondary education, and finally that of higher education; which have given, that is to say, the right to every one, under certain conditions of capacity and character, to open private schools in competition with the three orders of public schools. But the Church did not stop there. Hardly had it insured liberty to its educational institutions—a liberty by which all citizens might profit alike, but of which its own strong organisation and powerful resources enabled it more easily to take advantage—hardly was this result obtained than the Church tried to lay hands on the University itself, and to make its doctrines paramount there. . . . Thence arose a movement hostile to the enterprises of the Church, which has found expression since 1880 in a series of laws which excluded her little by little from the positions she had won, and only left to her, as to all other citizens, the liberty to teach apart from, and concurrently with, the State. The right to confer degrees has been given back to the State alone; the privilege of the 'letter of obedience' has been abolished; religious teaching has been excluded from the primary schools; and after having 'laicized,' as the French phrase is, the curriculum, the effort was persistently made to 'laicize' the staff. . . . From the University point of view, the territory of France is divided into seventeen academies, the chief towns of which are Paris, Douai, Caen, Rennes, Poitiers, Bordeaux, Toulouse, Montpellier, Aix, Grenoble, Chambéry, Lyons, Besançon, Nancy, Dijon, Clermont, and Algiers. Each academy has a rector at its head, who, under the authority of the Minister of Public Instruction, is charged with the material administration of higher and secondary education, and with the methods of primary instruction in his district. The administration of this last belongs to the prefect of each department, assisted by an academy-inspector. In each of these three successive stages—department, academy, and central administration—is placed a council, possessing administrative and disciplinary powers. The Departmental Council of Public Instruction, which comprises six officials . . . forms a disciplinary council for primary education, either public or free (i. e., State or private). This council sees to the application of programmes, lays down rules, and appoints one or more delegates in each canton to superintend primary schools. The Academic Council . . . performs similar functions with regard to secondary and higher education. The Higher Council of Public Instruction sits at Paris. It comprises forty-four elected representatives of the three educational orders, nine University officials, and four 'free' schoolmasters appointed by the Minister, and is the disciplinary court of appeal for the two preceding councils. . . . Such is the framework, administrative as well as judicial, in which education, whether public or free, lives and moves. . . . Since 1882 Primary Education has been compulsory for all children of both sexes, from the age of six to the end of the thirteenth year, unless before reaching the latter age they have been able to pass an examination, and to gain the certificate of primary studies. To satisfy the

law, the child's name must be entered at a public or private school; he may, however, continue to receive instruction at home, but in this case, after he has reached the age of eight, he must be examined every year before a State board. . . . At the age of thirteen the child is set free from further teaching, whatever may be the results of the education he has received. . . . In public schools the course of instruction does not include, as we have said, religious teaching; but one day in the week the school must take a holiday, to allow parents to provide such teaching for their children, if they wish to do so. The school building cannot be used for that purpose. In private schools religious instruction may be given, but this is optional. The programme of primary education includes: moral and civic instruction; reading, writing, French, geography and history (particularly those of France); general notions of law and science; the elements of drawing, modelling, and music; and gymnastics. No person of either sex can become a teacher, either public or private, unless he possesses the 'certificate of capacity for primary instruction' given by a State board. For the future—putting aside certain temporary arrangements—no member of a religious community will be eligible for the post of master in a public school. . . . As a general rule, every commune is compelled to maintain a public school, and, if it has more than 500 inhabitants, a second school for girls only. . . . The sum total of the State's expenses for primary education in 1887 is as high as eighty-five million francs (£3,400,000), and that without mentioning grants for school buildings, whereas in 1877 the sum total was only twelve millions (£480,000). . . . From 1877 to 1886, the number of public schools rose from 61,000 to 66,500; that of the pupils from 4,200,000 to 4,500,000, with 96,600 masters and mistresses; that of training schools for male teachers from 79 to 89, of training schools for female teachers from 18 to 77, with 5,400 pupils (3,500 of them women), and 1,200 masters. As to the results a single fact will suffice. In these ten years, before the generations newly called to military service have been able to profit fully by the new state of things, the proportion of illiterate recruits (which is annually made out directly after the lots are drawn) has already fallen from 15 to 11 per cent." —A. Lebon and P. Pelet, *France as it is*, ch. 5. — "In 1872, after the dreadful disaster of the war, Monsieur Thiers, President of the Gouvernement de la Défense Nationale, and Monsieur Jules Simon, Minister of Public Instruction, felt that what was most important for the nation was a new system of public instruction, and they set themselves the task of determining the basis on which this new system was to be established. In September, 1882, Monsieur Jules Simon issued a memorable circular calling the attention of all the most distinguished leaders of thought to some proposed plans. He did not long remain in power, but in his retirement he wrote a book entitled: 'Réforme de l'Enseignement Secondaire,' Monsieur Bréal, who was commissioned to visit the schools of Germany, soon after published another book which aroused new enthusiasm in France. . . . From that day a complete educational reform was decided on. In 1872 we had at the Ministère de l'Instruction Publique three distinguished men: Monsieur Dumont for the Enseignement Supérieur, one from whom we

hoped much and whose early death we had to mourn in 1884; Monsieur Zévort for the Enseignement Secondaire, who also died ere the good seed which he had sown had sprung up and borne fruit (1887); and Monsieur Buisson to whose wisdom, zeal, and energy we owe most of the work of the Enseignement Primaire. At their side, of maturer years than they, stood Monsieur Gréard, Recteur de l'Académie de Paris. . . . All the educationists of the first French Revolution had insisted on the solidarity of the three orders of education; maintaining that it was not possible to separate one from another, and that there ought to be a close correspondence between them. This principle lies at the root of the whole system of French national instruction. Having established this principle, the four leaders called upon all classes of teachers to work with them, and professors who had devoted their life to the promotion of superior instruction brought their experience and their powers of organization to bear upon schools for all classes, from the richest to the poorest. . . . But to reform and to reconstruct a system of instruction is not a small task. It is not easy to change at once the old methods, to give a new spirit to the masters, to teach those who think that what had been sufficient for them need not be altered and is sufficient forever. However, we must say that as soon as the French teachers heard of the great changes which were about to take place, they were all anxious to rise to the demands made on them, and were eager for advice and help. Lectures on pedagogy and psychology were given to them by the highest professors of philosophy, and these lessons were so much appreciated that the attention of the University of France was called to the necessity for creating at the Sorbonne a special course of lectures on pedagogy. Eleven hundred masters and mistresses attended them the first year that they were inaugurated; from that time till now their number has always been increasing. Now we have at the Sorbonne a Chaire Magistrale and Conférences for the training of masters and professors; and the faculties at Lyons, Bordeaux, Nancy, and Montpellier have followed the example given at the Sorbonne, Paris. . . . In 1878, the Musée Pédagogique was founded; in 1882, began the publication of the Revue Pédagogique and the Revue Internationale de l'Enseignement. Four large volumes of the Dictionnaire de Pédagogie, each containing about 3,000 closely printed pages, have also come out under the editorship of Monsieur Buisson, all the work of zealous teachers and educationists. In 1879 normal schools were opened. Then in 1880 primary schools, and in 1882 we may say that the Ecoles Maternelles and the Ecoles Infantines were created, so different are they from the infant schools or the Salles d'Asile; in 1883 a new examination was established for the Professorat and the Direction des Ecoles Normales, as well as for the inspectors of primary instruction; and in July, 1889, the law about public and private teaching was promulgated, perhaps one of the most important that has ever been passed by the Republic."—Mme. Th. Armagnac, *The Educational Renaissance of France* (Education, Sept., 1890).

France: A. D. 1890-1891.—Statistics.—The whole number of pupils registered in the primary, elementary and superior schools, public and private, of France and Algiers (excluding the

"écoles maternelles") for the school-year 1890-91, was 5,593,883; of which 4,384,905 were in public schools (3,760,601, "laïque," and 624,304 "congréganiste"), and 1,208,978 in private schools (151,412 "laïques," and 1,057,566 "congréganiste"). Of 36,484 communes, 35,503 possessed a public school, and 875 were joined for school purposes with another commune. The male teachers employed in the elementary and superior public schools numbered 28,657; female teachers, 24,273; total 52,930.—Ministère de l'Instruction publique, *Résumé des états de situation de l'enseignement primaire pour l'année scolaire 1890-1891*.

Ireland.—"The present system of National Education in Ireland was founded in 1831. In this year grants of public money for the education of the poor were entrusted to the lord-lieutenant in order that they might be applied to the education of the people. This education was to be given to children of every religious belief, and to be superintended by commissioners appointed for the purpose. The great principle on which the system was founded was that of 'united secular and separate religious instruction.' No child should be required to attend any religious instruction which should be contrary to the wishes of his or her parents or guardians. Times were to be set apart during which children were to have such religious instruction as their parents might think proper. It was to be the duty of the Commissioners to see that these principles were carried out and not infringed on in any way. They had also power to give or refuse money to those who applied for aid to build schools. Schools are 'vested' and 'non-vested.' Vested schools are those built by the Board of National Education; non-vested schools are the ordinary schools, and are managed by those who built them. If a committee of persons build a school, it is looked on by the Board as the 'patron.' If a landowner or private person builds a school, he is regarded as the patron if he has no committee. The patron, whether landlord or committee, has power to appoint or dismiss a manager, who corresponds with the Board. The manager is also responsible for the due or thorough observance of the laws and rules. Teachers are paid by him after he certifies that the laws have been kept, and gives the attendance for each quarter. When an individual is patron, he may appoint himself manager, and thus fill both offices. . . . The teachers are paid by salaries and by results fees. The Boards of Guardians have power to contribute to these results fees. Some unions do so and are called 'contributory.' School managers in Ireland are nearly always clerics of some denomination. There are sometimes, but very rarely, lay managers. . . . From the census returns of 1881 it appears that but fifty-nine per cent. of the people of Ireland are able to read and write. The greater number of national schools throughout Ireland are what are called 'unmixed,' that is, attended by children of one denomination only. The rest of the schools are called 'mixed,' that is, attended by children of different forms of religion. The percentage of schools that show a 'mixed' attendance tends to become smaller each year. . . . There are also twenty-nine 'model' schools in different parts of Ireland. These schools are managed directly by the Board of National Education. . . . According to the

report of the Commissioners of National Education for 1890, the 'percentage of average attendance to the average number of children on the rolls of the schools was but 59.0,' and the percentage of school attendance to the estimated population of school age in Ireland would be less than 50. Different reasons might be given for this small percentage of attendance. The chief reasons are, first, attendance at school not being compulsory, and next, education not being free. . . . The pence paid for school fees in Ireland may seem, to many people, a small matter. But in a country like Ireland, where little money circulates, and a number of the people are very poor, school pence are often not easily found every week. In 1890, £104,550 4s. and 8d. was paid in school fees, being an average of 4s. 3½d. per unit of average attendance."—*The Irish Peasant; by a Guardian of the Poor, ch. 8.*

Norway.—"In 1739 the schools throughout the country were regulated by a royal ordinance, but this paid so little regard to the economical and physical condition of Norway that it had to be altered and modified as early as 1741. Compulsory instruction, however, had thus been adopted, securing to every child in the country instruction in the Christian doctrine and in reading, and this coercion was retained in all later laws. . . . Many portions of the country are intersected by high mountains and deep fiords, so that a small population is scattered over a surface of several miles. In such localities the law has established 'ambulatory schools,' whose teachers travel from one farm to another, living with the different peasants. Although this kind of instruction has often been most incomplete and the teachers very mediocre, still educational coercion has everywhere been in force, and Christian instruction everywhere provided for the children. These 'ambulatory schools' formerly existed in large numbers, but with the increase of wealth and population, and the growing interest taken in education, their number has gradually diminished, and that of fixed circle-schools augmented in the same proportion."—G. Gade, *Rep't on the Educational System of Norway* (U. S. Bureau of Education, *Circulars of Information*, July, 1871).—"School attendance is compulsory for at least 12 weeks each year for all children in the country districts from 8 years of age to confirmation, and from 7 years to confirmation in the towns. According to the law of 1889, which in a measure only emphasizes preceding laws, each school is to have the necessary furnishings and all indispensable school material. The Norwegians are so intent upon giving instruction to all children that in case of poverty of the parents the authorities furnish text-books and the necessary clothing, so that school privileges may be accorded to all of school age."—U. S. Comm'r of Education, *Report*, 1889-90, p. 513.

Prussia: A. D. 1809.—Education and the liberation movement.—"The most important era in the history of public instruction in Prussia, as well as in other parts of Germany, opens with the efforts put forth by the king and people, to rescue the kingdom from the yoke of Napoleon in 1809. In that year the army was remodeled and every citizen converted into a soldier; landed property was declared free of feudal service; restrictions on freedom of trade were abolished, and the whole state was reorganized. Great reliance was placed on infusing a German spirit into the people by

giving them freer access to improved institutions of education from the common school to the university. Under the councils of Hardenberg, Humboldt, Stein, Altenstein, these reforms and improvements were projected, carried on, and perfected in less than a single generation. The movement in behalf of popular schools commenced by inviting C. A. Zeller, of Wirtemberg, to Prussia. Zeller was a young theologian, who had studied under Pestalozzi in Switzerland, and was thoroughly imbued with the method and spirit of his master. On his return he had convened the school teachers of Wirtemberg in barns, for want of better accommodations being allowed him, and inspired them with a zeal for Pestalozzi's methods, and for a better education of the whole people. On removing to Prussia he first took charge of the seminary at Koenigsberg, soon after founded the seminary at Karalene, and went about into different provinces meeting with teachers, holding conferences, visiting schools, and inspiring school officers with the right spirit. The next step taken was to send a number of young men, mostly theologians, to Pestalozzi's institution at Ifferten, to acquire his method, and on their return to place them in new, or reorganized teachers' seminaries. To these new agents in school improvement were joined a large body of zealous teachers, and patriotic and enlightened citizens, who, in ways and methods of their own, labored incessantly to confirm the Prussian state, by forming new organs for its internal life, and new means of protection from foreign foes. They proved themselves truly educators of the people. Although the government thus not only encouraged, but directly aided in the introduction of the methods of Pestalozzi into the public schools of Prussia, still the school board in the different provinces sustained and encouraged those who approved and taught on different systems. . . . Music, which was one of Pestalozzi's great instruments of culture, was made the vehicle of patriotic songs, and through them the heart of all Germany was moved to bitter hatred of the conqueror who had desolated her fields and homes, and humbled the pride of her monarchy. All these efforts for the improvement of elementary education, accompanied by expensive modifications in the establishments of secondary and superior education, were made when the treasury was impoverished, and taxes the most exorbitant in amount were levied on every province and commune of the kingdom."—H. Barnard, *National Education in Europe*, pp. 83-84.—For this notable educational work begun in Prussia in 1809, and which gave a new character to the nation, "the Providential man appeared in Humboldt, as great a master of the science and art of education as Scharnhorst was a master of the organisation of war. Not only was he himself, as a scholar and an investigator, on a level with the very first of his age, not only had he lived with precisely those masters of literature, Schiller and Goethe, who were most deliberate in their self-culture, and have therefore left behind most instruction on the higher parts of education, but he had been specially intimate with F. A. Wolf. It is not generally known in England that Wolf was not merely the greatest philologist but also the greatest teacher and educationist of his time. . . . Formed by such teachers, and supported by a more intense belief in culture than almost any man of his time, Humboldt began his work in

April, 1809. In primary education Fichte had already pointed to Pestalozzi as the best guide. One of that reformer's disciples, C. A. Zeller, was summoned to Königsberg to found a normal school, while the reformer himself, in his weekly educational journal, cheered fallen Prussia by his panegyric, and wrote enthusiastically to Niccolivius pronouncing him and his friends the salt and leaven of the earth that would soon leaven the whole mass. It is related that in the many difficulties which Zeller not unnaturally had to contend with, the King's genuine benevolence, interest in practical improvement, and strong family feeling, were of decisive use. . . . The reform of the Gymnasias was also highly successful. Sùvern here was among the most active of those who worked under Humboldt's direction. In deference to the authority of Wolf the classics preserved their traditional position of honour, and particular importance was attached to Greek. . . . But it was on the highest department of education that Humboldt left his mark most visibly. He founded the University of Berlin; he gave to Europe a new seat of learning, which has ever since stood on an equality with the very greatest of those of which Europe boasted before. We are not indeed to suppose that the idea of such a University sprang up for the first time at this moment, or in the brain of Humboldt. Among all the losses which befell Prussia by the Peace of Tilsit none was felt more bitterly than the loss of the University of Halle, where Wolf himself had made his fame. Immediately after the blow fell, two of the Professors of Halle made their way to Memel and laid before the King a proposal to establish a High School at Berlin. This was on August 22nd, 1807. . . . On September 4th came an Order of Cabinet, in which it was declared to be one of the most important objects to compensate the loss of Halle. It was added that neither of the two Universities which remained to Prussia, those of Königsberg and Frankfurt-on-the-Oder, could be made to supply the place of Halle, Königsberg being too remote from the seat of Government and Frankfurt not sufficiently provided with means. At Berlin a University could best, and at least expense, be established. Accordingly all funds which had hitherto gone to Halle were to go for the future to Berlin, and assurances were to be given to the expelled Professors which might prevent their talents being lost to the country. A University is not founded in a day, and accordingly while Stein held office the design did not pass beyond the stage of discussion. . . . Humboldt sent in his Report on May 12, 1809, and on August 16th followed the Order of Cabinet assigning to the new University, along with the Academies of Science and Art, an annual dotation of 150,000 thalers, and the Palace of Prince Henry as its residence. During the rest of his term of office Humboldt was occupied in negotiations with eminent men of science all over Germany, whose services he hoped to procure. He was certainly not unsuccessful. He secured Fichte for Philosophy; Schleiermacher, De Wette, and Marheineke for Theology; Savigny and Schmalz for Jurisprudence; Friedländer, Kohlrausch, Hufeland, and Reil for Medicine; Wolf, Buttman, Böckh, Heindorf, and Spalding for the Study of Antiquity; Niebuhr and Rùhs for History; Tralles for Mathematics (Gauss refused the invitation). The University was opened at

Michaelmas of 1810, and as the first result of it the first volume of Niebuhr's Roman History, opening so vast a field of historical speculation, was published in 1811. . . . Altogether in that period of German history the relations of literature, or rather culture in general, to politics are remarkable and exceptional. There had been a most extraordinary intellectual movement, a great outpouring of genius, and yet this had taken place not, as according to some current theories it ought to have done, in the bosom of political liberty, but in a country where liberty was unknown. And as it was not the effect, so the new literature did not seem disposed to become the cause, of liberty. Not only was it careless of internal liberty, but it was actually indifferent to national independence. The golden age of German literature is the very period when Germany was conquered by France. . . . So far literature and culture seemed a doubtful benefit, and might almost be compared to some pernicious drug, which should have the power to make men forget their country and their duties. Not unreasonably did Friedrich Perthes console himself for the disasters of Germany by reflecting that at least they had brought to an end 'the paper time,' the fool's paradise of a life made up of nothing more substantial than literature. In Humboldt's reform we have the compensation for all this. Here while on the one hand we see the grand spectacle of a nation in the last extremity refusing to part with the treasures of its higher life, on the other hand that higher life is no longer unnaturally divorced from political life. It is prized as one of the bulwarks of the State, as a kind of spiritual weapon by which the enemy may be resisted. And in the new and public-spirited generation of thinkers, of which Fichte and Schleiermacher were the principal representatives, culture returns to politics the honour that has been done to it. . . . In Humboldt and his great achievements of 1809, 1810, meet and are reconciled the two views of life which found their most extreme representatives in Goethe and Stein."—J. R. Seeley, *Life and Times of Stein*, pt. 6, ch. 3 (p. 2).

Prussia: A. D. 1874.—The Educational Administration.—"There is no organic school-law in Prussia, . . . though sketches and projects of such a law have more than once been prepared. But at present the public control of the higher schools is exercised through administrative orders and instructions, like the minutes of our Committee of Council on Education. But the administrative authority has in Prussia a very different basis for its operations from that which it has in England, and a much firmer one. It has for its basis these articles of the Allgemeine Landrecht, or common law of Prussia, which was drawn up in writing in Frederick the Great's reign, and promulgated in 1794, in the reign of his successor:—"Schools and universities are State institutions, having for their object the instruction of youth in useful and scientific knowledge. Such establishments are to be instituted only with the State's previous knowledge and consent. All public schools and public establishments of education are under the State's supervision, and must at all times submit themselves to its examinations and inspections. Whenever the appointment of teachers is not by virtue of the foundation or of a special privilege vested in certain persons or corporations, it belongs to the

State. Even where the immediate supervision of such schools and the appointment of their teachers is committed to certain private persons or corporations, new teachers cannot be appointed, and important changes in the constitution and teaching of the school cannot be adopted without the previous knowledge or consent of the provincial school authorities. The teachers in the gymnasiums and other higher schools have the character of State functionaries. . . . It would be a mistake to suppose that the State in Prussia shows a grasping and centralising spirit in dealing with education; on the contrary, it makes the administration of it as local as it possibly can; but it takes care that education shall not be left to the chapter of accidents. . . . Prussia is now divided into eight provinces, and these eight provinces are again divided into twenty-six governmental districts, or *Regierungen*. There is a Provincial School Board (*Provinzial-Schulcollegium*) in the chief town of each of the eight provinces, and a Governmental District Board in that of each of the twenty-six *Regierungen*. In general, the State's relations with the higher class of secondary schools are exercised through the Provincial Board; its relations with the lower class of them, and with the primary schools, through the District Board. In Berlin, the relations with these also are managed by the Provincial Board. A *Provinzial-Schulcollegium* has for its president the High President of the province; for its director the vice-president of that governmental district which happens to have for its centre the provincial capital. The Board has two or three other members, of whom, in general, one is a Catholic and one is a Protestant; and one is always a man practically conversant with school matters. The District Board has in the provincial capitals the same president and director as the Provincial Board; in the other centres of *Regierungen* it has for its president the President of the *Regierung*, and three or four members selected on the same principle as the members of the Provincial Board. The provincial State authority, therefore, is, in general, for gymnasiums, the larger progymnasiums, and *Realschulen* of the first rank, the Provincial School Board; for the smaller progymnasiums, *Realschulen* of the second rank, the higher *Bürger* Schools, and the primary schools of all kinds, the Governmental District Board. Both boards are in continual communication with the Educational Minister at Berlin. . . . Besides the central and provincial administration there is a local or municipal administration for schools that are not Crown patronage schools. . . . In most towns the local authority for schools of municipal patronage is the town magistracy, assisted by a *Stadtschulrath*; sometimes the local authority is a *Curatorium* or *Schulcommission*."—M. Arnold, *Higher Schools and Universities in Germany*, ch. 3.—"The secondary school differs from the elementary schools by a course of instruction going beyond the immediate demands of every-day life; from the special school, by the more general character of the courses of instruction; from the university, by its preparatory character. It has the special aim to give that sound basis of scientific and literary education which enables a man to participate in solving the higher problems of life in church, state, and society. In accordance with their historical development, two directions can be clearly traced, viz., the

gymnasium and the real-school: the former comprising gymnasias and pro-gymnasias; and the latter real-schools of the first class, real-schools of the second class, and higher *Bürger*-schools."—*Hist. of Secondary Instruction in Germany* (U. S. Bureau of Education, *Circulars of Information*, 1874, no. 3), p. 41.—"The name gymnasium came into use as early as the sixteenth century. The ministerial decree of the 12th of November, 1812, ordered that all learned school institutions, such as lyceums, pedagogiums, collegiums, Latin schools, etc., should bear the name gymnasium. A gymnasium is and has long been a classical school."—U. S. Comm'r of Education, *Report*, 1889-90, p. 318.

Prussia: A. D. 1885-1889.—The Elementary School-System.—"The New Yorker, anxious for a high degree of perfection in the elementary schools of his State, must be struck forcibly by the following merits of the Elementary School System of Prussia. . . . 1. Compulsory education laws, necessitating a full and regular attendance of the children of school age. 2. Official courses of study fixing the work to be accomplished in each of the different grades of schools. Uniformity is thus secured in the work done in all schools of the same class. 3. Definite qualifications and experience in teaching for eligibility to the office of school commissioner. 4. Provisions elevating teaching to the dignity of a profession and making the tenure of office secure. 5. Trained teachers in rural as well as city districts and a school year of at least forty weeks. 6. General supervision of instruction for children of school age in private schools and families, including the qualifications of instructors. . . . Every Prussian child between the ages of 6 and 14 must, except in cases of severe illness or other extraordinary cause, be present at every session of the school he attends. The lists of the children of school age, in charge of the local police (in rural districts the *Bürgermeister*), are kept so carefully that it is impossible to escape the provisions of the compulsory education laws, as much so as it is to evade the military service. Dispensations amounting to more than four weeks in the school year are never given to children under 12 years of age, and to them only when sickness in the family or other unusual cause make it advisable. . . . In order to understand the qualifications required of school commissioners (*Kreis Schulinspektoren*) in Prussia, let us review briefly the requirements of male teachers. 1. Elementary schools. It may be stated at the outset that almost all the male elementary school teachers are normal school graduates. To insure similarity in training and a thorough knowledge of character, few foreigners and few beside normal school (*Schullehrer-Seminar*) graduates are admitted to the male teaching force. From 6 to 14 the would-be teacher has attended, let us suppose, an elementary school. He must then absorb the three years' course laid down for the preparatory schools. . . . He is now ready for the normal school. At the close of a three years' course at the normal school he is admitted to the first teachers' examination. If successful, he must next practice as candidate or assistant teacher not less than two years and not more than five years before his admission to the final test. . . . If a teacher fails to pass the ex-

amination within five years, he is dropped. 2. Middle schools. For teachers of lower classes the same requirements with the addition of ability to teach a foreign tongue, or natural history in its broadest sense, and the attainment of the mark 'good' in all subjects at the final examination. . . . For higher classes, a special examination provided for middle school teachers. . . . There is really no gradation between elementary and middle schools. The latter merely go on somewhat further with elementary school work, introducing French, Latin and English. 3. High schools (Realschulen, Realgymnasien, Progymnasien and Gymnasien). All high school teachers, except those engaged in technical departments, must first absolve the nine years' gymnasial course, which commences at the close of the third school year. Next comes the university course of three or four years. The candidate is now ready for the State examination. The subjects for this State examination . . . are divided into four classes: 1. The ancient languages and German; 2. Mathematics and natural sciences; 3. History and geography; 4. Religion and Hebrew. At the close of one year's practice to test teaching capacity he receives a second certificate and is thereupon engaged provisionally. . . . The school commissioners . . . are either former regular high school teachers, general doctors of philosophy or more rarely theologians, or former normal school teachers. All must have had practical experience in teaching. . . . The work to be accomplished in each Prussian elementary school is definitely laid down by law. Each school is not a law unto itself as to what shall be done and when and how this is to be done. I have learned by practical experience that the work in ungraded schools compares most favorably with that of graded schools."—J. R. Parsons, Jr., *Prussian Schools through American eyes*, ch. 1, sect. 5-10.—Prussian elementary schools are now free. "In this respect Prussia has passed through three stages. Under the first elementary schools were entirely self-supporting; under the second they received State aid, but were still largely self-supporting; under the third, Laws of 1888 and 1889, elementary schools were made free and the State pays a larger proportion of the cost of maintenance. Districts must pay for repairs, new buildings and cost of heating. If unwilling to provide proper accommodations for the children of school age, they can be forced by the government to do so. Poor districts may receive special government aid to meet such expenses. . . . The direct aim of the laws of June 14, 1888, and March 31, 1889, was to lighten the burden of local taxation for schools for children of school age. These laws have had a beneficial effect in increasing slightly the wages of teachers. Teachers' salaries are still quite small in Prussia, particularly in the case of females. Allowances are generally made for house-rent and fuel. Teachers in rural districts are provided with a house and garden. Their salaries are often not much more than half those paid city teachers of the same grade, and yet, as regards professional training and character of work, they are fully equal to city teachers. . . . The average annual salary received by teachers in Prussia in 1886 was \$267.50. The average for the same year in New York was \$409.27. The Prussian teacher, however, received fuel and dwelling free, in addition to his

regular salary. . . . In 1885 the population of Prussia was 28,318,470, and the total cost of public education per caput was \$1.7717. Drs. Schneider and Petersilie of Berlin, in 'Preussische Statistik 101,' published in 1889, reckon the total cost for 1888, excluding army and navy schools, at \$50,192,857. . . . In Prussia, elementary instruction is the first consideration. The resolution adopted by the national assembly (Landtag) December 22, 1870, is a good illustration of this. It was at the very crisis of the Franco-German war, yet the Landtag called on the government to increase the number of normal schools and the capacity of those already existing, and 'thus to put an end to the practice of filling up teachers' vacancies by appointing unqualified individuals.'"—J. R. Parsons, Jr., *Prussian Schools through American eyes*, ch. 1, sect. 15-17.—"Throughout Prussia there is now one school-room and one teacher to 446 inhabitants and 78.8 children actually attending school. This shows that there are far too few teachers. But the government and the cities have recently devoted considerable sums to the establishment of new places for teachers, so that, in the year 1881, there were 10,000 more teachers working in the public schools than in 1873. The salaries of the teachers were also raised. The average payment in the country is 954 marks, in the cities 1,430 marks. . . . The expense of maintaining the Prussian national schools amounts annually to about 102,000,000 of marks, 43,000,000 of which are paid by the cities. One hundred and ten colleges for the training of teachers are now engaged in the education of male and female instructors, with an attendance of 9,892 pupils; that is, there is one pupil to every 2,758 inhabitants. In the case of the female teachers only, a considerable degree of assistance is rendered by private institutions. . . . The intermediary schools established in 1872, and recently converted into the higher citizen schools, form a transition from the national schools to the higher schools. These teach religion, German, French, English, history and geography, arithmetic and mathematics, natural history and physics, writing, drawing, singing, and gymnastics. The course embraces six years without Latin, with the privilege of one year's service in the army instead of three. Complementary to the national school is the finishing school. There are a large number in Prussia, namely, 1,261 with 68,766 pupils: 617 with 10,395 in the country, and 644 with 58,371 in the cities. Of these 644,342 are obligatory by local statutes, 302 are optional. Since the law of 1878 special care has been devoted to the compulsory education of orphaned children. . . . The preparatory instruction of female teachers leaves much to be desired."—F. Kirchner, *Contemporary Educational Thought in Prussia* (*Educational Rev.*, May, 1891).—"About 25 per cent. of all the teachers in public middle schools are women, hence . . . women hold positions in these schools more frequently than in the lower, the purely elementary, schools of the kingdom. The greatest ratio of women teachers in Prussia is found in private middle schools, where 2,422 of 3,126 (or nearly 80 per cent.) are women. . . . In all the public schools of Prussia (elementary, middle, and secondary) only 10,600 women teachers were employed [1887], or 14½ per cent. of all the teachers in the kingdom. . . . Before the public schools of the kingdom had the care and close

supervision on the part of the state which they have now, many more private schools were in existence than at present. During the last 25 years the private schools have not increased in numbers, but perceptibly decreased."—U. S. Comm'r of Education, *Report*, 1889-90, pp. 287-289.

Russia.—"After serfdom had been abolished, the Emperor Alexander II. saw that the indispensable consequence of this great reform must be a thorough reorganization of public instruction. In 1861 a committee was appointed to draw up the plan of a law. In 1862 M. Tancef submitted to the Emperor a 'General plan for the organization of popular education,' which contained some very excellent points. The result was the General Regulations of 1864, which are still in force. . . . The difficulties which a complete reorganization of popular education meets in Russia are enormous. They are principally caused by the manner in which the inhabitants live, scattered over a large extent of country, and by their extreme poverty. . . . The density of population is so small that there are only 13.6 inhabitants to one square kilometer (2½ square kilometers to 1 square mile), instead of 69 as in France. Under these circumstances only the children from the center hamlet and those living nearest to it could attend school regularly, especially during the winter-months. The remainder of the inhabitants would pay their dues without having any benefit, which would necessarily foster discontent. As Prince Gagarin says, 'It has, therefore, not been possible to make education in Russia compulsory, as in Germany, nor even to enforce the establishment of a school in each community.' It is doubtless impossible at present to introduce into Russia the educational systems of the western countries."—É. de Laveleye, *Progress of Education in Russia* (U. S. Bureau of Education, *Circulars of Information*, 1875, no. 3), pp. 31-32.

Scotland.—"The existing system of education in Scotland is an outcome of causes deeply involved in the political and religious history of the country. . . . This system was preceded by a complicated variety of educational agencies, of which the chief were parish schools, founded upon a statute of 1646, which was revived and made operative in 1696. Parish and burgh schools, supported by local funds and by tuition fees, made up the public provision for education. In addition there were schools partly maintained by parliamentary grants, mission and sessional schools maintained by the Established Church and the Free Church, and other parochial and private schools. Parish and burgh schools carried instruction to the level of the universities, which were easily accessible to all classes. The date of the passage of the 'Scotch Education Act' (1872) was opportune for the organization of these various agencies into a system maintained by the combined action of the Government and local authorities. In framing the Scotch act care was taken, as in framing the English act two years before, to guard the rights of the Government with respect to funds appropriated from the public treasury. At the same time equal care was shown for the preservation of the Scotch ideal. This was a broad and comprehensive ideal, embracing the different grades of scholastic work. . . . This ideal differentiates the Scotch act from the English act passed two

years before. The latter related to elementary schools exclusively; the former has a wider scope, providing the foundations of a system of graded schools correlated to the universities which lie beyond its province. With respect to the interests of the Government, the two acts are substantially the same. . . . For the general direction of the system a Scotch educational department was created, composed, like the English department, of lords of the privy council, and having the same president. . . . The act ordered every parent to secure the instruction of his children between the ages of 5 and 13, or until a certificate of exemption should be secured. Parents failing in this obligation are subject to prosecution and penalty by fine or imprisonment. The compulsory provision extends to blind children. Parochial or burghal authorities were authorized to pay the tuition fees of those children whose parents could not meet the expenditure, a provision rendered unnecessary by the recent remission of all fees. The Scotch act, by a sweeping clause, made compulsory attendance universal; the English act left the matter of compulsion to local managers. A subsequent act (1878) fixed the standard of exemption in Scotland at the fifth [grade, or year of study], which pupils should pass at 11 years of age. In 1883, the upper limit of compulsory attendance in Scotland was raised to 14 years. . . . The universities of Scotland have been more intimately related to the life of the common people than those of any other country. In this respect, even more if possible than in their constitution, they present a marked contrast to the English universities. To their democratic spirit may be traced many of the characteristics which differentiate the Scotch people and policies from those of England. To their widespread influence, to the ambitions which they awakened, and the opportunities which they brought within the reach of the whole body of Scottish youth is due, in large measure, the independent and honorable part that Scotland has played in the history of the United Kingdom. This popular character of the universities has been fostered by the curriculum of the common schools, by the easy passage from the schools to the higher institutions; by the inexpensive mode of student life in the university towns, and by the great number of scholarship funds available for the poor. These conditions, however, have not been without their disadvantages. Of these, the chief are the low entrance standards and the consequent forcing of preparatory instruction upon the university professors. . . . As a result of long-continued efforts a Scotch universities act was passed in 1889. This act provided for the reorganization of the four universities; for the elevation of their standards; the enrichment of their curricula, and the increase of their resources. . . . The Scotch universities have taken part in the popular movements of the last decade. They maintain local examinations for secondary schools and students. St. Andrews has been particularly active in promoting the higher education of women, having instituted the special degree of L. L. A. (lady literate in arts). Edinburgh also grants a certificate in arts to women. Aberdeen has recently appointed a lecturer on education, following thus the precedent set by Edinburgh and St. Andrews. The four universities are united in a scheme of university extension."—U. S. Com-

missioner of Education, *Report, 1889-90, v. 1, pp. 188-207.*

Sweden.—"Sweden has two ancient and famous universities—Uppsala and Lund. That of Lund is in the south part of the kingdom, and when founded was on Danish territory. The income from its estates is about 176,000 riksdollars (\$46,315) per annum. It also receives yearly aid from the state. In 1867 it had 75 professors and tutors, and 400 students. Uppsala is the larger university, located at the old town of that name—the ancient capital of Sweden—an hour and a half by rail north of Stockholm. It has 100 professors and tutors, and 1,449 students, an increase of 131 over the year 1869. . . . This university had its beginning as an institution of learning as far back as 1250. In 1438 it had one academic professorship, and was dedicated as an university in 1477. Its principal endowment was by Gustavus Adolphus in 1624, when he donated to it all of the estate in lands that he possessed, amounting in all to 300 farms."—C. C. Andrews, *Rept. on the Educational System of Sweden (U. S. Bureau of Education, Circulars of Information, July, 1871).*

Switzerland.—"The influence of the Reformation, and, in the following age, of the Jesuit reaction, gave to Switzerland, as to Germany, its original and fundamental means and agencies of national education, and impressed also upon the population a habit of dutiful regard for schools and learning. It was not, however, till forty years ago that the modern education of Switzerland was organized. 'The great development of public education in Switzerland,' to quote Mr. Kay, 'dates from 1832, after the overthrow of the old oligarchical forms of cantonal government and the establishment of the present democratic forms.' Zürich, Lausanne, and Geneva take the lead in Switzerland as centres of educational influence. The canton in which the work of educational reform began was Zürich. . . . The instrument of the reform, rather the revolution, was Scherr, a trained school-teacher from Würtemberg, a teacher, in particular, of deaf mutes to speak articulately. This man initiated in Zürich the new scheme and work of education, and founded the first Training College. He was looked upon by the oligarchs, partly feudalists, and partly manufacturers, as a dangerous revolutionist, and was exiled from Zürich. But now a monument to his memory adorns the city. The work which he began could not be suppressed or arrested. Zürich has ever since taken the lead in education among the cantons of Switzerland. Derived originally from Germany, the system is substantially identical with that of Germany. . . . The principles and methods are substantially alike throughout. There are, first, the communal schools—these of course in largest number—one to every village, even for every small hamlet, provided and maintained, wholly or chiefly, by the commune; there are burgher schools in towns, including elementary, real, and superior schools, supported by the towns; there are cantonal schools—gymnasias and industrial or technical schools—supported by the State, that is, by the canton. There is often a Cantonal University. There is of course a Cantonal Training School or College, and there are institutes of various kinds. The Cantonal Universities, however, are on a small and economical scale; as yet there is no Federal

University. School life in Switzerland is very long, from six to fourteen or fifteen, and for all who are to follow a profession, from fifteen to twenty-two."—J. H. Rigg, *National Education, ch. 4.*

Modern: Asiatic Countries.

China.—"Every step in the process of teaching is fixed by unalterable usage. So much is this the case, that in describing one school I describe all, and in tracing the steps of one student I point out the course of all; for in China there are no new methods or short roads. In other countries, a teacher, even in the primary course, finds room for tact and originality. In those who dislike study, a love of it is to be inspired by making 'knowledge pleasant to the taste'; and the dull apprehension is to be awakened by striking and apt illustrations. . . . In China there is nothing of this. The land of uniformity, all processes in arts and letters are as much fixed by universal custom as is the cut of their garments or the mode of wearing their hair. The pupils all tread the path trodden by their ancestors of a thousand years ago, nor has it grown smoother by the attrition of so many feet. The undergraduate course may be divided into three stages, in each of which there are two leading studies: In the first the occupations of the student are committing to memory (not reading) the canonical books and writing an infinitude of diversely formed characters, as a manual exercise. In the second, they are the translation of his text books (i. e., reading), and lessons in composition. In the third, they are belles lettres and the composition of essays. Nothing could be more dreary than the labors of the first stage. . . . Even the stimulus of companionship in study is usually denied, the advantages resulting from the formation of classes being as little appreciated as those of other labor saving machinery. Each pupil reads and writes alone, the penalty for failure being so many blows with the ferule or kneeling for so many minutes on the rough brick pavement which serves for a floor. At this period fear is the strongest motive addressed to the mind of the scholar. . . . This arctic winter of monotonous toil once passed, a more auspicious season dawns on the youthful understanding. The key of the cabala which he has been so long and so blindly acquiring is put into his hands. He is initiated in the translation and exposition of those sacred books which he had previously stored away in his memory. . . . The light however is let in but sparingly, as it were, through chinks and rifts in the long dark passage. A simple character here and there is explained, and then, it may be after the lapse of a year or two, the teacher proceeds to the explication of entire sentences. Now for the first time the mind of the student begins to take in the thoughts of those he has been taught to regard as the oracles of wisdom. . . . The value of this exercise can hardly be overestimated. When judiciously employed it does for the Chinese what translation into and out of the dead languages of the west does for us. It calls into play memory, judgment, taste, and gives him a command of his own vernacular which, it is safe to assert, he would never acquire in any other way. . . . The first step in composition is the yoking together of double characters. The second is the reduplication of these binary compounds and the construc-

tion of parallels—an idea which runs so completely through the whole of Chinese literature that the mind of the student requires to be imbued with it at the very outset. This is the way he begins: The teacher writes, 'wind blows,' the pupil adds, 'rain falls'; the teacher writes, 'rivers are long,' the pupil adds, 'seas are deep,' or 'mountains are high,' &c. From the simple subject and predicate, which in their rude grammar they describe as 'dead' and 'living' characters, the teacher conducts his pupil to more complex forms, in which qualifying words and phrases are introduced. He gives as a model some such phrase as 'The Emperor's grace is vast as heaven and earth,' and the lad matches it by 'The Sovereign's favor is profound as lake and sea.' These couplets often contain two propositions in each member, accompanied by all the usual modifying terms; and so exact is the symmetry required by the rules of the art that not only must noun, verb, adjective, and particle respond to each other with scrupulous exactness, but the very tones of the characters are adjusted to each other with the precision of music. Begun with the first strokes of his untaught pencil, the student, whatever his proficiency, never gets beyond the construction of parallels. When he becomes a member of the institute or a minister of the imperial cabinet, at classic festivals and social entertainments, the composition of impromptu couplets, formed on the old model, constitutes a favorite pastime. Reflecting a poetic image from every syllable, or concealing the keen point of a cutting epigram, they afford a fine vehicle for sallies of wit; and poetical contests such as that of Melibœus and Menalcas are in China matters of daily occurrence. If a present is to be given, on the occasion of a marriage, a birth-day, or any other remarkable occasion, nothing is deemed so elegant or acceptable as a pair of scrolls inscribed with a complimentary distich. When the novice is sufficiently exercised in the 'parallels' for the idea of symmetry to have become an instinct, he is permitted to advance to other species of composition which afford freer scope for his faculties. Such are the 'shotiah,' in which a single thought is expanded in simple language, the 'lun,' the formal discussion of a subject more or less extended, and epistles addressed to imaginary persons and adapted to all conceivable circumstances. In these last, the forms of the 'complete letter writer' are copied with too much servility; but in the other two, substance being deemed of more consequence than form, the new fledged thought is permitted to essay its powers and to expatiate with but little restraint. In the third stage, composition is the leading object, reading being wholly subsidiary. It takes for the most part the artificial form of verse, and of a kind of prose called 'wen-chang,' which is, if possible, still more artificial. The reading required embraces mainly rhetorical models and sundry anthologies. History is studied, but only that of China, and that only in compends; not for its lessons of wisdom, but for the sake of the allusions with which it enables a writer to embellish classic essays. The same may be said of other studies; knowledge and mental discipline are at a discount and style at a premium. The goal of the long course, the flower and fruit of the whole system, is the 'wen-chang'; for this alone can insure success in the public examinations for the civil service, in which students be-

gin to adventure soon after entering on the third stage of their preparatory course. . . . We hear it asserted that 'education is universal in China; even coolies are taught to read and write.' In one sense this is true, but not as we understand the terms 'reading and writing.' In the alphabetical vernaculars of the west, the ability to read and write implies the ability to express one's thoughts by the pen and to grasp the thoughts of others when so expressed. In Chinese, and especially in the classical or book language, it implies nothing of the sort. A shopkeeper may be able to write the numbers and keep accounts without being able to write anything else; and a lad who has attended school for several years will pronounce the characters of an ordinary book with faultless precision, yet not comprehend the meaning of a single sentence. Of those who can read understandingly (and nothing else ought to be called reading), the proportion is greater in towns than in rural districts. But striking an average, it does not, according to my observation, exceed one in twenty for the male sex and one in ten thousand for the female." The literary examinations, "coming down from the past, with the accretions of many centuries, . . . have expanded into a system whose machinery is as complex as its proportions are enormous. Its ramifications extend to every district of the empire; and it commands the services of district magistrates, prefects, and other civil functionaries up to governors and viceroys. These are all auxiliary to the regular officers of the literary corporation. In each district there are two resident examiners, with the title of professor, whose duty it is to keep a register of all competing students and to exercise them from time to time in order to stimulate their efforts and keep them in preparation for the higher examinations in which degrees are conferred. In each province there is one chancellor or superintendent of instruction, who holds office for three years, and is required to visit every district and hold the customary examinations within that time, conferring the first degree on a certain percentage of the candidates. There are, moreover, two special examiners for each province, generally members of the Hanlin, deputed from the capital to conduct the great triennial examination and confer the second degree. The regular degrees are three: 1st, 'Siu-tsai' or 'Budding talent,' 2d, 'Kujin' or 'Deserving of promotion,' 3d, 'Tsin-shi' or 'Fit for office.' To which may be added, as a fourth degree, the Hanlin, or member of the 'Forest of Pencils.' . . . The first degree only is conferred by the provincial chancellor, and the happy recipients, fifteen or twenty in each department, or 1 per cent. of the candidates, are decorated with the insignia of rank and admitted to the ground floor of the nine storied pagoda. The trial for the second degree is held in the capital of each province, by special commissioners, once in three years. It consists of three sessions of three days each, making nine days of almost continuous exertion—a strain to the mental and physical powers, to which the infirm and aged frequently succumb. In addition to composition in prose and verse, the candidate is required to show his acquaintance with history, (the history of China,) philosophy, criticism, and various branches of archæology. Again 1 per cent. is decorated; but it is not until the more fortunate among them succeed in passing the metropolitan

triennial that the meed of civil office is certainly bestowed. They are not, however, assigned to their respective offices until they have gone through two special examinations within the palace and in the presence of the emperor. On this occasion the highest on the list is honored with the title of 'chuang yuen' or 'laureate,' a distinction so great that in the last reign it was not thought unbefitting the daughter of a 'chuang yuen' to be raised to the position of consort of the Son of Heaven. A score of the best are admitted to membership in the Academy, two or three score are attached to it as pupils or probationers, and the rest drafted off to official posts in the capital or in the provinces, the humblest of which is supposed to compensate the occupant for a life of penury and toil."—Rev. W. A. P. Martin, *Rept. on the System of Public Instruction in China* (U. S. Bureau of Education, *Circulars of Information*, 1877, no. 1).

Japan.—From the fourth to the eighth centuries of the Christian era, "after the conquest of Corea by the Japanese emperor Jigo Kogo, came letters, writing, books, literature, religion, ethics, politics, medicine, arts, science, agriculture, manufactures, and the varied appliances of civilization; and with these entered thousands of immigrants from Corea and China. Under the intellectual influence of Buddhism—the powerful and aggressive faith that had already led captive the half of Asia—of the Confucian ethics and philosophy, and Chinese literature, the horizon of the Japanese mind was immensely broadened. . . . In the time of the European 'dark ages' the Japanese were enjoying what, in comparison, was a high state of civilization. . . . Under the old régime of the Sho-guns, all foreign ideas and influences were systematically excluded, and the isolation of Japan from the rest of the world was made the supreme policy of the government. Profound peace lasted from the beginning of the seventeenth century to 1868. During this time, schools and colleges, literature and learning, flourished. It was the period of scholastic, not of creative, intellectual activity. The basis of education was Chinese. What we consider the means of education, reading and writing, were to them the ends. Of classified science there was little or none. Mathematics was considered as fit only for merchants and shop-keepers. No foreign languages were studied, and their acquisition was forbidden. . . . There was no department of education, though universities were established at Kioto and Yedo, large schools in the daimio's capitals, and innumerable private schools all over the country. Nine-tenths of the people could read and write. Books were very numerous and cheap. Circulating libraries existed in every city and town. Literary clubs and associations for mutual improvement were common even in country villages. Nevertheless, in comparison with the ideal systems and practice of the progressive men of New Japan, the old style was as different from the present as the training of an English youth in mediæval times is from that of a London or Oxford student of the present day. Although an attempt to meet some of the educational necessities arising from the altered conditions of the national life were made under the Sho-gun's régime, yet the first attempt at systematic work in the large cities was made

under the Mikado's government, and the idea of a new national plan of education is theirs only. In 1871 the Mom Bu Sho, or department of education, was formed, of which the high counselor Oki, a man of indomitable vigor and perseverance, was made head. . . . According to the scheme of national education promulgated in 1872, the empire is divided into eight Dai Gaku Ku, (Daigakku,) or great educational divisions. In each of these there is to be a university, normal school, schools of foreign languages, high schools, and primary schools. The total number of schools will number, it is expected, over 55,000. Only in the higher schools is a foreign language to be taught. In the lower schools the Japanese learning and elementary science translated or adopted from European or American text-books are to be taught. The general system of instruction, methods, discipline, school-aids, furniture, architecture, are to be largely adopted from foreign models, and are now to a great extent in vogue throughout the country."—W. E. Griffis, *Education in Japan* (U. S. Bureau of Education, *Circulars of Information*, 1875, no. 2).

Modern : America.

A. D. 1619-1819.—**Virginia.**—**College of William and Mary.**—"In 1619—one year before the Pilgrim Fathers came to the land named New England by Captain John Smith—Sir Edwin Sandys, president of the Virginia Company in old England, moved the grant of ten thousand acres of land for the establishment of a university at Henrico. The proposed grant, which was duly made, included one thousand acres for an Indian college; the remainder was to be 'the foundation of a seminary of learning for the English.' The very same year the bishops of England, at the suggestion of the King, raised the sum of fifteen hundred pounds for the encouragement of Indian Education. . . . Tenants were sent over to occupy the university lands, and Mr. George Thorpe, a gentleman of His Majesty's Privy Chamber, came over to be the superintendent of the university itself. This first beginning of philanthropy toward the Indians and of educational foundations for the Indians in America was suspended by reason of the Indian massacre, in the spring of 1622, when Mr. Thorpe and three hundred and forty settlers, including tenants of the university, were cut off by an insurrection of savages. It was only two years after this terrible catastrophe that the idea of a university in Virginia was revived. Experience with treacherous Indians suggested that the institution should be erected upon a secluded sheltered site—an island in the Susquehanna River. . . . The plan was broken off by the death of its chief advocate and promoter, Mr. Edward Palmer. But the idea of a university for Virginia was not lost. . . . In 1660, the colonial Assembly of Virginia took into their own hands the project of founding educational institutions within their borders. The motive of the Virginians was precisely the same as that of the great and general Court of Massachusetts, when it established Harvard College, and grammar schools to fit youth 'for ye university.' The Virginians voted 'that for the advance of learning, education of youth, supply of the ministry, and promotion of piety, there be land taken upon purchases for a college and free schoole, and that there be, with as much speed as may be convenient, housing

erected thereon for entertainment of students and schollers.' It was also voted in 1660 that the various commissioners of county courts take subscriptions on court days for the benefit of the college, and that the commissioners send orders throughout their respective counties to the vestrymen of all the parishes for the purpose of raising money from such inhabitants as 'have not already subscribed.' It appears from the record of this legislation in Hening's Statutes of Virginia that already in 1660, 'His Majestie's Governour, Council of State, and Burgesses of the present grand Assembly have severally subscribed severall considerable sumes of money and quantites of tobacco,' to be paid upon demand after a place had been provided and built upon for educational purposes. A petition was also recommended to Sir William Berkeley, then governor of Virginia, that the King be petitioned for letters patent authorizing collections from 'well disposed people in England for the erecting of colledges and schooles in this cuntrye.' This action of the Virginians in 1660 ought to be taken as much better evidence of an early regard for education in that colony than the well-known saying of Governor Berkeley would seem to indicate. In reply to an inquiry by the lords commissioners of trades and plantations respecting the progress of learning in the colony of Virginia, Berkeley said, 'I thank God there are no free schools nor printing, and I hope we shall not have these hundred years.' This answer by a crusty old governor has been quoted perhaps too often as an index of the real sentiments of colonial Virginia toward the cause of education. Not only is the tone of popular legislation entirely opposed to the current view, but Berkeley's own acts should modify our judgment of his words. He actually subscribed, with other gentlemen of the colony, for 'a Colledge of students of the liberal arts and sciences.' Undoubtedly Sir William did not believe in popular education as it is now understood. If he had done so, he would have been much in advance of his time. . . . Some writers would have us believe that the college was actually planted as early as 1661, but this is highly improbable. Early educational enactments in Virginia were like many of those early towns—on paper only. And yet the Virginians really meant to have both towns and a college. In 1688-'89, twenty-five hundred pounds were subscribed by a few wealthy gentlemen in the colony and by their merchant friends in England toward the endowment of the higher education. In 1691 the colonial Assembly sent the Rev. James Blair, the commissary or representative of the Bishop of London, back to England to secure a charter for the proposed college. Virginia's agent went straight to Queen Mary and explained the educational ambition of her colony in America. The Queen favored the idea of a college, and William wisely concurred. The royal pair agreed to allow two thousand pounds out of the quit-rents of Virginia toward building the college. . . . The English Government concluded to give not only £2,000 in money, but also 20,000 acres of land, with a tax of one penny on every pound of tobacco exported from Maryland and Virginia, together with all fees and profits arising from the office of surveyor-general, which were to be controlled by the president and faculty of the college. They were authorized to appoint special surveyors for the counties whenever the governor

and his council thought it necessary. These privileges, granted by charter in 1693, were of great significance in the economic history of Virginia. They brought the entire land system of the colony into the hands of a collegiate land office. Even after the Revolution, one-sixth of the fees to all public surveyors continued to be paid into the college treasury down to the year 1819, when this custom was abolished."—H. B. Adams, *The College of William and Mary (Circulars of Information of the Bureau of Education, 1887, no. 1).*

A. D. 1635.—Massachusetts.—Boston Latin School.—"The Public Latin School of Boston enjoys the distinction of being the oldest existing school within the bounds of the United States. It was founded in the spring of 1635, thus antedating Harvard College, and has been in continuous existence ever since, with the interruption of a few months, during the siege of Boston, 1775-1776." The two hundred and fiftieth anniversary of the founding of the school was celebrated April 23, 1885, on which occasion the Rev. Phillips Brooks, D. D., delivered an address from which the following passages are taken: "The colony under Winthrop arrived in the *Arabella* and founded Boston in 1630. On the 4th of September, 1633, the Griffin brought John Cotton from the Lincolnshire Boston, full of pious spirit and wise plans for the new colony with which he had cast in his lot. It has been suggested that possibly we owe to John Cotton the first suggestion of the first town-school. . . . However this may be, here is the town record of the 13th of the second month, 1635. It is forever memorable, for it is the first chapter of our Book of Genesis, the very cradle of all our race: 'At a general meeting upon publique notice . . . it was then generally agreed upon that our brother Philemon Pormort shall be entreated to become scholemaster, for the teaching and nourtering of children among us.' It was two hundred and fifty years ago to-day [April 23, 1885] just nineteen years after the day when William Shakespeare died, just seventy-one years after the day when he was born. How simple that short record is, and how unconscious that short view is of the future which is wrapped up in it! Fifty-nine thousand children who crowd the Boston public schools to-day—and who can count what thousands yet unborn?—are to be heard crying out for life in the dry, quaint words of that old vote. By it the first educational institution, which was to have continuous existence in America, and in it the public school system of the land, came into being. Philemon Pormort, the first teacher of the Latin School, is hardly more than a mere shadow of a name. It is not even clear that he ever actually taught the school at all. A few years later, with Mr. Wheelwright, after the Hutchinson excitement, he disappears into the northern woods, and is one of the founders of Exeter, in New Hampshire. There are rumors that he came back to Boston and died here, but it is all very uncertain. . . . The name 'free school' in those days seems to have been used to characterize an institution which should not be restricted to any class of children, and which should not be dependent on the fluctuating attendance of scholars for its support. It looked forward to ultimate endowment, like the schools of England. The town set apart the rent of Deer Island, and some of the other

islands in the harbor, for its help. All the great citizens, Governor Winthrop, Governor Vane, Mr. Bellingham, and the rest, made generous contributions to it. But it called, also, for support from those who sent their children to it, and who were able to pay something; and it was only of the Indian children that it was distinctly provided that they should be 'taught gratis.' It was older than any of the schools which, in a few years, grew up thick around it. The same power which made it spring out of the soil was in all the rich ground on which these colonists, unlike any other colonists which the world has ever seen, had set their feet. Roxbury had its school under the Apostle Eliot in 1645. Cambridge was already provided before 1643. Charlestown did not wait later than 1636. Salem and Ipswich were, both of them, ready in 1637. Plymouth did not begin its system of public instruction till 1663. It was in 1647 that the General Court enacted that resolve which is the great charter of free education in our Commonwealth, in whose preamble and ordinance stand the immortal words: 'That learning may not be buried in the grave of our fathers, in church and Commonwealth, the Lord assisting our endeavors, it is therefore ordered that every township in this jurisdiction, after the Lord hath increased them to the number of fifty householders, shall then forthwith appoint one within their town to teach all such children as shall resort to him to write and read.' There can be no doubt, then, of our priority. But mere priority is no great thing. The real interest of the beginning of the school is the large idea and scale on which it started. It taught the children, little Indians and all, to read and write. But there seems every reason to suppose that it taught also the Latin tongue, and all that then was deemed the higher knowledge. It was the town's only school till 1682."

—*The Oldest School in America*, pp. 5-24.

A. D. 1636.—Massachusetts.—Harvard College.—"The first settlers in New England, recognizing the importance of a higher education than could be given in the common schools, began at once the founding of a university. The avowed object of this university was the training of young men for the ministry. Nothing could show clearer the spirit of these early colonists. Though less than four thousand in number, and scattered along the shores of Massachusetts Bay in sixteen hamlets, they were, nevertheless, able to engage in such an enterprise before adequate provision had been made for food, raiment, shelter, a civil government, or divine worship; at a time when soil and climate had disappointed them, and their affairs were in a most critical condition; for, not only were they called to face famine, disease, and death, but the mother country and the surrounding savage tribes were threatening them with war. . . . It was near the close of 1636, a little more than six years after the landing of the Puritans, when this first step was taken by the General Court of the Massachusetts Colony. At this assembly, presided over by Sir Henry Vane, governor of the colony, the General Court agreed to give £400 (a munificent sum for the time) towards the founding of a school or college, but left the question of its location and building to be determined by the Court that was to sit in September of the following year. This, it is said, was the first assembly 'in which the people by their representatives

ever gave their own money to found a place of education.' At the next Court it was decided to locate the college at Newtown, or 'the New Towne,' and twelve of the principal magistrates and ministers were chosen to carry out this design. A few months later, they changed the name of the town to Cambridge, not only to tell their posterity whence they came, but also, as Quincy aptly says, to indicate 'the high destiny to which they intended the institution should aspire.' Another year, however, passed before the College was organized. The impulse given to it then was due to aid which came from so unexpected a quarter that it must have seemed to the devout men of New England as a clear indication of the divine favor. The Rev. John Harvard, a Non-conformist minister, was graduated, in 1635, from the Puritan college of Emmanuel, at Cambridge, England, and came, two years later, to America and settled in Charlestown, where he immediately took a prominent part in town affairs. His contemporaries gave him the title of reverend, and he is said to have officiated occasionally in Charlestown as 'minister of God's word.' One has recently said of him that he was 'beloved and honored, a well-trained and accomplished scholar of the type then esteemed,' and that in the brief period of his life in America—scarcely more than a year—he cemented more closely friendships that had been begun in earlier years. The project of a college was then engrossing the thought of these early friends and doubtless he also became greatly interested in it. Thus it happened that, when his health failed, through his own love of learning and through sympathy with the project of his daily associates, he determined to bequeath one-half of his estate, probably about £800, besides his excellent library of three hundred and twenty volumes, towards the endowment of the college. This bequest rendered possible the immediate organization of the college, which went into operation 'on the footing of the ancient institutions of Europe,' and, out of gratitude to Harvard, the General Court voted that the new institution should bear his name."—G. G. Bush, *Harvard*, pp. 12-15.

A. D. 1642-1732.—New England and New York.—Early Common Schools.—"New England early adopted, and has, with a single exception, constantly maintained the principle that the public should provide for the instruction of all the youth. That which elsewhere, as will be found, was left to local provision, as in New York; or to charity, as in Pennsylvania; or to parental interest, as in Virginia, was in most parts of New England early secured by law. . . . The act of 1642 in Massachusetts, whose provisions were adopted in most of the adjacent colonies, was admirable as a first legislative school law. It was watchful of the neglect of parents, and looked well after the ignorant and the indigent. But it neither made schooling free, nor imposed a penalty for its neglect. . . . Schools were largely maintained by rates, were free only to the necessitous, and in not a few of the less populous districts closed altogether or never opened. This led, five years later, to more stringent legislation. . . . As suggesting the general scope and tenor of the law, the following extract

aggressive state that the world contained, and held a dominion that has as much right to be called an 'Empire' as the Assyrian, the Babylonian or the Persian. While Babylonia, ruled by Arab conquerors, declined in strength, and Assyria proper was merely struggling into independence, Egypt put forth her arm and grasped the fairest regions of the earth's surface." The immediate successor of Thothmes I. was his son, Thothmes II., who reigned in association with a sister of masculine character, queen Hatasu. The strong-minded queen, moreover, prolonged her reign after the death of this elder brother, until a younger brother, Thothmes III. displaced her. The Third Thothmes was the greatest of Egyptian conquerors and kings. He carried his arms beyond the Euphrates, winning a memorable victory at Megiddo over the confederated kings of the Syrian and Mesopotamian countries. He left to his son (Amenhotep II.) "a dominion extending about 1,100 miles from north to south, and (in places) 450 miles from west to east." He was a great builder, likewise, and "has left the impress of his presence in Egypt more widely than almost any other of her kings, while at the same time he has supplied to the great capitals of the modern world their most striking Egyptian monuments." The larger of the obelisks now standing in Rome and Constantinople, as well as those at London and New York were all of them produced in the reign of this magnificent Pharaoh. The two obelisks last named stood originally, and for fourteen centuries at the front of the great temple of the sun, in Heliopolis. They were removed by the Roman Emperor, Augustus, B. C. 23, to Alexandria, where they took in time the name of Cleopatra's Needles,—although Cleopatra had no part in their long history. After nineteen centuries more of rest, these strangely coveted monuments were again disturbed, and transported into lands which their builder knew not of. The later kings of the Eighteenth Dynasty seem to have, none of them, possessed the energy and character of Thothmes III. The line ended about 1400 B. C. with Horremheb, who left no heirs.—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 20.

About B. C. 1500-1400.—The Tell el-Amarna Tablets.—Correspondence of the Egyptian kings with Babylonia, Assyria, Armenia, Asia Minor, Syria and Palestine.—The discovery made in 1887 by a peasant woman of Middle Egypt may be described as the most important of all contributions to the early political history of Western Asia. We have become possessed of a correspondence, dating from the fifteenth century B. C., which was carried on during the reigns of three Egyptian kings, with the rulers of Babylon, Assyria, Armenia, Asia Minor, Syria, and Palestine, during a period of great activity, when revolutions which affected the whole history of the east shore lands of the Mediterranean were in progress; and we find in these tablets a contemporary picture of the civilisation of the age. . . . The Tell Amarna tablets represent a literature equal in bulk to about half the Pentateuch, and concerned almost exclusively with political affairs. They are clay tablets, varying from two inches to a foot in length, with a few as large as eighteen inches, covered with cuneiform writing

generally on both sides, and often on the edges as well. The peasantry unearthed nearly the complete collection, including some 320 pieces in all; and explorers afterwards digging on the site have added only a few additional fragments. The greater number were bought for the Berlin Museum, while eighty-two were acquired for England, and the rest remain either in the Boulak Museum at Cairo, or, in a few instances, in the hands of private collectors. . . . Tell Amarna (apparently 'the mound of the tumuli') is an important ruined site on the east bank of the Nile, about a hundred and fifty miles in a straight line south of Cairo. Its Egyptian name is said to have been Khu-en-aten, 'Glory of the Sun-disk.'—*The Tell Amarna Tablets* (Edinburgh Rev., July, 1893).—"The collection of Cuneiform Tablets recently found [1887] at Tell el-Amarna in Upper Egypt, consisted of about three hundred and twenty documents, or portions of documents. The British Museum possesses eighty-two . . . the Berlin Museum has one hundred and sixty, a large number being fragments; the Gizeh Museum has sixty; and a few are in the hands of private persons. . . . In color the Tablets vary from a light to a dark dust tint, and from a flesh-color to dark brick-red. The nature of the clay of which they are made sometimes indicates the countries from which they come. The size of the Tablets in the British Museum varies from $8\frac{3}{4}$ inches x $4\frac{1}{4}$ in. to $2\frac{1}{2}$ in. x $1\frac{1}{4}$ in.; the longest text contains 98 lines, the shortest 10. . . . The greater number are rectangular, and a few are oval; and they differ in shape from any other cuneiform documents known to us. . . . The writing . . . resembles to a certain extent the Neo-Babylonian, i. e., the simplification of the writing of the first Babylonian Empire used commonly in Babylonia and Assyria for about seven centuries B. C. It possesses, however, characteristics different from those of any other style of cuneiform writing of any period now known to exist; and nearly every tablet contains forms of characters which have hitherto been thought peculiar to the Ninevite or Assyrian style of writing. But, compared with the neat, careful hand employed in the official documents drawn up for the kings of Assyria, it is somewhat coarse and careless, and suggests the work of unskilled scribes. One and the same hand, however, appears in tablets which come from the same person and the same place. On some of the large tablets the writing is bold and free; on some of the small ones the characters are confused and cramped, and are groups of strokes rather than wedges. The spelling . . . is often careless, and in some instances syllables have been omitted. At present it is not possible to say whether the irregular spelling is due to the ignorance of the scribe or to dialectic peculiarities. . . . The Semitic dialect in which these letters are written is Assyrian, and is, in some important details, closely related to the Hebrew of the Old Testament. . . . The documents were most probably written between the years B. C. 1500 to 1450. . . . They give an insight into the nature of the political relations which existed between the kings of Western Asia and the kings of Egypt, and prove that an important trade existed between the two countries from very early times. . . . A large number of the present tablets are addressed to 'the King of Egypt,' either Amenophis III. or Amenophis IV. Nearly all of them consist of reports of disasters

to the Egyptian power and of successful intrigues against it, coupled by urgent entreaties for help, pointing to a condition of distraction and weakness in Egypt. . . . The most graphic details of the disorganized condition, and of the rival factions, of the Egyptian dependencies lying on the coastline of Phœnicia and Northern Palestine, are to be gathered from a perusal of the dispatches of the governors of the cities of Byblos, Beyrut and Tyre."—*The Tell el-Amarna Tablets in the British Museum, introd.*—In the present state of cuneiform research I believe it to be impossible to give a translation of the Tell el-Amarna texts which would entirely satisfy the expert or general reader. No two scholars would agree as to any interpretation which might be placed upon certain rare grammatical forms and unknown words in the Babylonian text, and any literal translation in a modern language would not be understood by the general reader on account of the involved style and endless repetition of phrases common to a Semitic idiom and dialect. About the general meaning of the contents of the greater number of the letters there can be no doubt whatever, and it is therefore possible to make a summary of the contents of each letter, which should, as a rule, satisfy the general reader, and at the same time form a guide to the beginner in cuneiform. Summaries of the contents of the Tell el-Amarna tablets in the British Museum have been published in 'The Tell el-Amarna Tablets in the British Museum, with autotype facsimiles,' printed by order of the Trustees, London, 1892, and it is hoped that the transliteration, given in the following pages may form a useful supplement to that work. . . . No. 1. A Letter from Egypt—Amenophis III. to Kallimma (?) Sin, King of Karaduniyash, referring to his proposed marriage with Sukharti, the daughter of Kallimma-Sin, and containing the draft of a commercial treaty, and an allusion to the disappearance of certain chariots and horses. No. 2. Letters from Babylonia—Burraburiyash, King of Karaduniyash, to Amenophis IV., referring to the friendship which had existed between their respective fathers, and the help which had been rendered to the King of Egypt by Burraburiyash himself; the receipt of two manahs of gold is acknowledged and a petition is made for more. No. 3. Burraburiyash, King of Karaduniyash to Amenophis IV., complaining that the Egyptian messengers had visited his country thrice without bringing gifts, and that they withheld some of the gold which had been sent to him from Egypt; Burraburiyash announces the despatch of a gift of lapis-lazuli for the Egyptian princess who was his son's wife. . . . No. 30. Letter from Abi-milki, governor of Tyre, to the King of Egypt, reporting that he believes Zimrida will not be able to stir up disaffection in the city of Sidon, although he has caused much hostility against Tyre. He asks for help to protect the city, and for water to drink and wood to burn, and he sends with his messenger Ili-milki five talents of copper and other gifts for the King of Egypt. He reports that the King of Danuna is dead and that his brother reigns in his stead; one half of the city of Ugarit has been destroyed by fire; the soldiers of the Khatti have departed; Itagamapairi, governor of Kadesh, and Aziru are fighting against Namyawiza. If the King of Egypt will but send a few troops, all will be well with Tyre. . . . No. 43. Letter from the gov-

ernor of a town in Syria to the King of Egypt, reporting that the rebels have asserted their independence; that Biridashwi has stirred up rebellion in the city of Inu-Amma; that its people have captured chariots in the city of Ashtarti: that the kings of the cities of Buzruna and Khalunni have made a league with Biridashwi to slay Namyawiza (who, having taken refuge in Damascus and being attacked by Arzawiya, declared himself to be a vassal of Egypt); that Arzawiya went to the city of Gizza and afterwards captured the city of Shaddu; that Itak-kama ravaged the country of Gizza; and that Arzawiya and Biridashwi have wasted the country of Abitu. No. 44. Continuation (?) of a letter to the King of Egypt, reporting that, owing to the hostilities of Abd-Ashirta, Khâya, an official, was unable to send ships to the country of Amurri, as he had promised. The ships from Arvad which the writer has in his charge, lack their full complement of men for war service, and he urges the king to make use of the ships and crews which he has had with him in Egypt. The writer of the letter also urges the King of Egypt to appoint an Egyptian official over the naval affairs of Sidon, Beyrut and Arvad, and to seize Abd-Ashirta and put him under restraint to prevent him obstructing the manning of the ships of war. . . . No. 58. Letter from the governor of a district in Palestine (?) to the governors of neighbouring states in the land of Canaan, informing them that he is about to send his messenger Akiya on a mission to the King of Egypt, and to place himself and every thing that he has at his disposal. Akiya will go to Egypt by the way of Canaan, and the writer of this letter suggests that any gifts they may have to send to Egypt should be carried by him, for Akiya is a thoroughly trustworthy man."—C. Bezold, *Oriental Diplomacy: Being the transliterated text of the Cuneiform Despatches, preface.*—Under the title of "The Story of a 'Tell,'" Mr. W. M. Flinders Petrie, the successful excavator and explorer of Egyptian antiquities, gave a lecture in London, in June, 1892, in which he described the work and the results of an excavation then in progress under his direction on the supposed site of Lachish, at a point where the maritime plain of Philistia rises to the mountains of Judæa, on the route from Egypt into Asia. The chairman who introduced Mr. Petrie defined the word "Tell" as follows: "A Tell is a mound of earth showing by the presence of broken pottery or worked stone that it is the site of a ruined city or village. In England when a house falls down or is pulled down the materials are usually worth the expense of removing for use in some new building. But in Egypt common houses have for thousands of years been built of sun-dried bricks, in Palestine of rough rubble walling, which, on falling, produces many chips, with thick flat roofs of plaster. It is thus often less trouble to get new than to use old material; the sites of towns grow in height, and depressions are filled up." The mound excavated by Mr. Petrie is known as Tell el Hesi. After he left the work it was carried on by Mr. Bliss, and Mr. Petrie in his lecture says: "The last news is that Mr. Bliss has found the long looked for prize, a cuneiform tablet. . . . From the character of the writing, which is the same as on the tablets written in Palestine in 1400 B. C., to the Egyptian king at Tell el-Amarna, we have a close

Church, not occupied for college purposes, was leased, and became a very valuable endowment to the college. The sources whence the funds of the institution were derived, besides the proceeds of the lotteries above mentioned, were the voluntary contributions of private individuals in this country, and sums obtained by agents who were subsequently sent to England and France. In May, 1760, the college buildings began to be occupied. In 1763 a grammar school was established. . . . On the breaking out of the Revolutionary War the business of the college was almost entirely broken up, and it was not until after the return of peace that its affairs were again regularly attended to. In May, 1784, the college, upon its own application, was erected into a university; its corporate title was changed from King's College to Columbia College, and it was placed under the control of a board termed Regents of the University. . . . The college continued under that government until April, 1787, when the Legislature of the State restored it to its original position under the present name of Columbia College. . . . At the same time a new body was created, called by the same name, 'The Regents of the University,' under which all the seminaries of learning mentioned in the act creating it were placed by the Legislature. This body still exists under its original name."—*Columbia College Handbook*, pp. 5-9.

A. D. 1754-1769.—New Hampshire.—Dartmouth College, and the "Dartmouth College Case."—"Dartmouth College . . . was originally a charity school for the instruction of Indians in the Christian religion, founded by the Rev. Eleazer Wheelock, D. D., about the year 1754, at Lebanon, in Connecticut. Its success led Dr. Wheelock to solicit private subscriptions in England, for the purpose of enlarging it, and of extending its benefits to English colonists. Funds having been obtained for this purpose from various contributors, among whom the Earl of Dartmouth, Secretary for the Colonies, was a large donor, Dr. Wheelock constituted that nobleman and other persons trustees, with authority to fix the site of the College. The place selected was on the Connecticut River, at what is now the town of Hanover, in New Hampshire, where large donations of land were made by the neighboring proprietors. A charter for the college was obtained from the crown, in 1769, creating it a perpetual corporation. The charter recognized Dr. Wheelock as founder, appointed him to be the president, and empowered him to name his successor, subject to the approval of the trustees; to whom was also imparted the power of filling vacancies in their own body, and of making laws and ordinances for the government of the college, not repugnant to the laws of Great Britain or of the province, and not excluding any person on account of his religious belief. Under this charter, Dartmouth College had always existed, unquestioned and undisturbed in its rights as a corporation, down to the Revolution, and subsequently until the year 1815. Whether from political or personal motives springing up outside of the board of trustees of that period, or from some collisions arising within the body itself, it appears that . . . legislative interference with the chartered rights of this college was threatened. . . . In the following year (1816), the difficulties, which

had become mixed with political interests, culminated in a direct interference by the Legislature. In that year an act was passed, changing the corporate name from 'The Trustees of Dartmouth College' to 'The Trustees of Dartmouth University'; enlarging the number of trustees, vesting the appointment of some of them in the political bodies of the State, and otherwise modifying the ancient rights of the corporation as they existed under its charter derived from the crown of England. A majority of the existing trustees refused to accept or to be bound by this act, and brought an action of trover in the Supreme Court of the State, in the name of the old corporation, against a gentleman, Mr. W. H. Woodward, who was in possession of the college seal and other effects, and who claimed to hold them as one of the officers of the newly-created 'university.' The argument in this case was made in the State court, for the college, by Mr. Mason and Mr. Jeremiah Smith, assisted by Mr. Webster. The decision was against the claim of the college. It was then determined to remove the cause, by writ of error, to the Supreme Court of the United States, under the provisions of the Federal Constitution and laws creating in that tribunal an appellate jurisdiction in cases which, although originating in a State court, involved the construction and operation of the Federal Constitution. This was supposed to be such a case, because it was claimed by the college that the act of the Legislature, modifying its charter, impaired the obligation of a contract; an exercise of power which the Constitution of the United States prohibits to the Legislature of a State. As soon as it was known in New Hampshire that this very interesting cause was to come before the Supreme Court of the United States, the friends of the college, including their other counsel in the State court, unanimously desired to have it committed to the hands of Mr. Webster. He consented to take charge of it in the autumn of 1817; but the cause was not argued at Washington until February, 1818. . . . Before the case of *Dartmouth College vs. Woodward* occurred, there had been no judicial decisions respecting the meaning and scope of the restraint in regard to contracts, excepting that it had more than once been determined by the Supreme Court of the United States that a grant of lands made by a State is a contract within the protection of this provision, and is, therefore, irrevocable. These decisions, however, could go but little way toward the solution of the questions involved in the case of the college. . . . Was the State of New Hampshire—a sovereign in all respects after the Revolution, and remaining one after the Federal Constitution, excepting in those respects in which it had subjected its sovereignty to the restraints of that instrument—bound by the contracts of the English crown? Is the grant of a charter of incorporation a contract between the sovereign power and those on whom the charter is bestowed? If an act of incorporation is a contract, is it so in any case but that of a private corporation? Was this college, which was an institution of learning, established for the promotion of education, a private corporation, or was it one of those instruments of government which are at all times under the control and subject to the direction of the legislative power? All these questions were involved in the inquiry

whether the legislative power of the State had been so restrained by the Constitution of the United States that it could not alter the charter of this institution, against the will of the trustees, without impairing the obligation of a contract. . . . On the conclusion of the argument, the Chief Justice intimated that a decision was not to be expected until the next term. It was made in February, 1819, fully confirming the grounds on which Mr. Webster had placed the cause. From this decision, the principle in our constitutional jurisprudence, which regards a charter of a private corporation as a contract, and places it under the protection of the Constitution of the United States, takes its date."—G. T. Curtis, *Life of Daniel Webster*, c. 1, ch. 8.

A. D. 1762-1769.—Rhode Island.—Brown University.—"Brown University, the oldest and best endowed institution of learning connected with the Baptist denomination, dates back for its origin to a period anterior to the American Revolution, when in all the thirteen colonies there were less than 70 Baptist churches, with perhaps 4,000 communicants. It is not surprising that, at the memorable meeting of the Philadelphia Association, held on the 12th of October, 1762, when the members were finally led to regard it, in the words of Backus, as 'practicable and expedient to erect a College in the Colony of Rhode Island, under the chief direction of the Baptists, in which education might be promoted and superior learning obtained, free from any sectarian tests,' the mover in the matter should at first have been laughed at, the thing being looked upon as, under the circumstances, an utter impossibility. But leaders at that time, like Morgan Edwards and Isaac Eaton, Samuel Jones, Abel Morgan, Benjamin Griffith, John Sutton and John Gano, were men of faith. . . . At the time of which I speak, there was graduated from Princeton, with the second honors of his class, a man of wonderful mental and physical endowments, an early pupil of Isaac Eaton at Hopewell, James Manning, of Elizabethtown, New Jersey. To him the enterprise of the college was by common consent intrusted. . . . The first commencement of the college, which was held in the then new Baptist meeting-house of the town of Warren, on the 7th of September, 1769, has already been regarded as a Red Letter Day in its history. Five years previous, the General Assembly . . . had granted a charter for a 'College or University in the English Colony of Rhode Island and Providence Plantations, in New England in America.' . . . Without funds, without students, and with no present prospect of support, a beginning must be made where the president could be the pastor of a church, and thus obtain an adequate compensation for his services. Warren, then as now a delightful and flourishing inland town, situated 10 miles from Providence, seemed to meet the requisite requirements; and thither, accordingly, Manning removed with his family in the spring of 1764. He at once commenced a Latin School, as the first step preparatory to the work of college instruction. Before the close of the year a church was organized, over which he was duly installed as pastor. The following year, at the second annual meeting of the corporation, held in Newport, Wednesday, September 3d, he was formally elected, in the language of the records, 'President of the College, Professor of Languages and

other branches of learning, with full power to act in these capacities at Warren or elsewhere.' On that same day, as appears from a paper now on file in the archives of the Library, the president matriculated his first student, William Rogers, a lad of fourteen, the son of Captain William Rogers, of Newport. Not only was this lad the first student of the college, but he was also the first freshman class."—R. A. Guild, *The First Commencement of Rhode Island College (R. I. Hist. Soc. Coll's, c. 7), pp. 269-271*—Six years after the founding of the University it was removed from Warren to Providence, and its name changed from Rhode Island College to Brown University, in honor of John Brown, of Providence, who was its most liberal benefactor.—G. W. Greene, *Short Hist. of Rhode Island*, p. 196.—Although founded by the Baptist Church, the charter of the University "expressly forbids the use of religious tests. The corporation is divided into two Boards—the Trustees, 36 in number, of whom 22 must be Baptists, 5 Quakers, 5 Episcopalians, and 4 Congregationalists, and the Fellows, 12 in number, of whom 8, including the President, must be Baptists, and the remainder of other denominations. Twelve Trustees and 5 Fellows form a quorum. The college estate, the students, and the members of the faculty, with their families, are exempt from taxation and from serving as jurors."—S. G. Arnold, *Hist. of the State of R. I.*, ch. 18 (v. 2).

A. D. 1769-1884.—The United States.—Sectarian Institutions of Learning.—A large proportion of the very great number of educational institutions in the United States which have a collegiate or a university rank, in some high or low degree, were created and are maintained and governed by sectarian religious bodies. They are too numerous to be named; but the following may be cited as being, perhaps, the most notable in this class: under Baptist auspices, Brown University, Providence, R. I., founded in 1769; Colby University, at Waterville, Me., founded in 1820; Colgate University, at Hamilton, N. Y., founded in 1816; Columbian University, at Washington, founded in 1821; Rochester University, at Rochester, N. Y., founded in 1851. Under Congregationalist auspices: Bowdoin College, at Brunswick, Me., founded in 1794; Iowa College, at Grinnell, Ia., founded in 1843. Under Episcopalian auspices: Hobart College, at Geneva, N. Y., founded (as a college) in 1822; Kenyon College, at Gambier, O., founded in 1824; Lehigh University, at South Bethlehem, Pa., founded in 1867; Trinity College, at Hartford, Conn., founded in 1823; University of the South, at Sewanee, Tenn., founded in 1857. Under Methodist auspices: Allegheny College, at Meadville, Pa., founded in 1815; Boston University, at Boston, Mass., founded in 1869; De Pauw University, at Greencastle, Ind., founded in 1837; Dickinson College, at Carlisle, Pa., founded in 1783; Northwestern University, at Evanston and Chicago, Ill., founded in 1855; Syracuse University, at Syracuse, N. Y., founded in 1871; Vanderbilt University, at Nashville, Tenn., founded in 1873; Wesleyan University, at Middletown, Conn., founded in 1831. Under Presbyterian auspices: Beloit College, at Beloit, Wis., founded in 1843; Cumberland College, at Lebanon, Tenn., founded in 1827; Lafayette College, at Easton, Pa., founded in 1822; Lake Forest University, at Lake Forest and Chicago, founded

in 1857. Under Roman Catholic auspices: The Catholic University of America, at Washington, founded in 1864; the Georgetown University, at Washington, founded in 1815; University of Notre Dame, at Notre Dame, Ind., founded in 1862. Under Universalist auspices: Tufts College, at Boston, founded in 1857.

A. D. 1770.—New Jersey.—Rutgers College.—"Rutgers College, located at New Brunswick, was chartered by George III. in 1770, and was called Queen's College, in honour of his consort. The present name was substituted by the legislature of the State, in 1825, at request of the trustees, in honour of Col. Henry Rutgers, of New York, to whom the institution is indebted for liberal pecuniary benefactions. The charter was originally granted to such Protestants as had adopted the constitution of the reformed churches in the Netherlands, as revised by the national synod of Dordrecht, in the years 1618 and 1619. . . . The Theological College of the Reformed Dutch Church is established here and intimately blended with the literary institution"—T. F. Gordon, *Gazetteer of the State of N. J. (bound with "History of New Jersey")*, p. 86.

A. D. 1776-1880.—New England and New York.—State School Systems.—"It was not until over thirty years after the close of the war of 1776 that a regular system of schools at the public expense was established. New England boasted with pride of being the first in education, as she had been in war. Her example was closely followed by the other States. In New York, in 1805, many gentlemen of prominence associated for the purpose of establishing a free school in New York City for the education of the children of persons in indigent circumstances, and who did not belong to, or were not provided for by, any religious society. These public-spirited gentlemen presented a memorial to the Legislature, setting forth the benefits that would result to society from educating such children, and that it would enable them more effectually to accomplish the objects of their institution if the schools were incorporated. The bill of incorporation was passed April 9, 1805. This was the nucleus from which the present system of public schools started into existence. Later on, in the year 1808, we find from annual printed reports that two free schools were opened and were in working order. . . . It was the intention of the founders of these schools—among whom the names of De Witt Clinton, Ferdinand de Peyster, John Murray, and Leonard Bleecker stand prominent as officers—to avoid the teachings of any religious society; but there were among the people many who thought that sufficient care was not being bestowed upon religious instruction; to please these malcontents the literary studies of the pupils were suspended one afternoon in every week, and an association of fifty ladies of 'distinguished consideration in society' met on this day and examined the children in their respective catechisms. . . . To read, write, and know arithmetic in its first branches correctly, was the extent of the educational advantages which the founders of the free-school system deemed necessary for the accomplishment of their purposes."—A. H. Rhine, *The Early Free Schools of Am. (Popular Science Monthly, March, 1880)*.

A. D. 1785-1880.—The United States.—Land-grants for Schools.—"The question of

the endowment of educational institutions by the Government in aid of the cause of education seems to have met no serious opposition in the Congress of the Confederation, and no member raised his voice against this vital and essential provision relating to it in the ordinance of May 20, 1785, 'for ascertaining the mode of disposing of lands in the Western Territory.' This provided: 'There shall be reserved the lot No. 16 of every township for the maintenance of public schools within said township.' This was an endowment of 640 acres of land (one section of land, one mile square) in a township six miles square, for the support and maintenance of public schools 'within said township.' The manner of establishment of public schools thereunder, or by whom, was not mentioned. It was a reservation by the United States, and advanced and established a principle which finally dedicated one thirty-sixth part of all public lands of the United States, with certain exceptions as to minerals, &c., to the cause of education by public schools. . . . In the Continental Congress, July 13, 1787, according to order, the ordinance for the government of the 'Territory of the United States northwest of the river Ohio' came on, was read a third time, and passed [see NORTHWEST TERRITORY: A. D. 1787]. It contained the following: 'Art. 3. Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged.' The provision of the ordinance of May 20, 1785, relating to the reservation of the sixteenth section in every township of public land, was the inception of the present rule of reservation of certain sections of land for school purposes. The endowment was the subject of much legislation in the years following. The question was raised that there was no reason why the United States should not organize, control, and manage these public schools so endowed. The reservations of land were made by surveyors and duly returned. This policy at once met with enthusiastic approval from the public, and was tacitly incorporated into the American system as one of its fundamental organic ideas. Whether the public schools thus endowed by the United States were to be under national or State control remained a question, and the lands were held in reservation merely until after the admission of the State of Ohio in 1802. . . . To each organized Territory, after 1803, was and now is reserved the sixteenth section (until after the Oregon Territory Act reserved the thirty-sixth as well) for school purposes, which reservation is carried into grant and confirmation by the terms of the act of admission of the Territory or State into the Union; the State then becoming a trustee for school purposes. These grants of land were made from the public domain, and to States only which were known as public-land States. Twelve States, from March 3, 1803, known as public-land States, received the allowance of the sixteenth section to August 14, 1848. . . . Congress, June 13, 1812, and May 26, 1824, by the acts ordering the survey of certain towns and villages in Missouri, reserved for the support of schools in the towns and villages named, provided that the whole amount reserved should not exceed one-twentieth part of the whole lands included in the general survey of such town or village. These lots were reserved and sold for the benefit of the schools. Saint Louis received

a large fund from this source. . . . In the act for the organization of the Territory of Oregon, August 14, 1848, Senator Stephen A. Douglas inserted an additional grant for school purposes of the thirty-sixth section in each township, with indemnity for all public-land States thereafter to be admitted, making the reservation for school purposes the sixteenth and thirty-sixth sections, or 1,280 acres in each township of six miles square reserved in public-land States and Territories, and confirmed by grant in terms in the act of admission of such State or Territory into the Union. From March 13, 1853, to June 30, 1880, seven States have been admitted into the Union having a grant of the sixteenth and thirty-sixth sections, and the same area has been reserved in eight territories."—T. Donaldson, *The Public Domain*, ch. 13.

A. D. 1789.—The United States.—"The Constitution of the United States makes no provision for the education of the people; and in the Convention that framed it, I believe the subject was not even mentioned. A motion to insert a clause providing for the establishment of a national university was voted down. I believe it is also the fact, that the Constitutions of only three of the thirteen original States made the obligation to maintain a system of Free Schools a part of their fundamental law."—H. Mann, *Lect's and Annual Repts on Education*, lect. 5.

A. D. 1791-1892.—State Universities.—A majority of the States in the Union have established universities, each bearing the name of the State, and more or less supported by endowments and appropriations provided by legislative acts. In most cases, the founding of these institutions was initiated by the various land grants of the United States (see above: A. D. 1785-1880, and below, 1862). The State universities, distinctly characterized as such, are the following: Alabama, founded at Tuscaloosa, in 1831; California, at Berkeley, founded in 1868 (connected with which is the Lick Observatory, on Mt. Hamilton, founded by James Lick, in 1875); Colorado, at Boulder, founded in 1876; Georgia, at Athens, founded in 1801; Idaho, at Moscow, founded in 1892; Illinois, at Champaign and Urbana, founded in 1866; Indiana, at Bloomington, founded in 1820; Kansas, at Lawrence, founded in 1864; Michigan, at Ann Arbor, founded (originally at Detroit) in 1821; Minnesota, at Minneapolis, in 1868; Missouri, at Columbia and Rolla, founded in 1839; Mississippi, at Oxford, founded in 1848; Nebraska, at Lincoln, founded in 1869; North Dakota, at Grand Fork, founded in 1884; Ohio, at Athens, founded in 1802; South Dakota, at Vermilion, founded in 1882; Tennessee, at Knoxville, founded (first as Blount College) in 1794; Texas, at Austin and Galveston, founded in 1876; Vermont, at Burlington, founded in 1791; Virginia, at Charlottesville, founded in 1819; Washington, at Seattle, founded in 1860; Wisconsin, at Madison, founded in 1850; Wyoming, at Laramie, founded in 1887.

A. D. 1793.—Massachusetts.—Williams College.—"Williams College, at Williamstown, Berkshire County, Mass., was chartered in 1793. The town and the college were named in honor of Col. Ephraim Williams, who had command of the forts in the Hoosac Valley, and was killed in a battle with the French and Indians, September 8, 1755. By his will he established a

free school in the township which was to bear his name. The most advanced students of this free school became the first college class, numbering 4, and received the regular degree of bachelor of arts in the autumn of 1795. The small amount left by the will of Colonel Williams was carefully managed for 30 years by the executors, and they then obtained permission from the State legislature to carry out the benevolent purposes of the testator. The fund for building was increased by individual subscriptions, and by the avails of a lottery, which the general court granted for that purpose. The building which is now known as West College was then erected for the use of the free school and was finished in 1790. . . . The free school was opened in 1791, with Rev. Ebenezer Fitch, a graduate of Yale College, as preceptor, and Mr. John Lester as assistant. . . . The success of the school was so great that the next year the trustees asked the legislature to incorporate the school into a college. This was done, and a grant of \$4,000 was made from the State treasury for the purchase of books and philosophical apparatus. The college was put under the care of 12 trustees, who elected Preceptor Fitch the first president of the college."—E. B. Parsons, *Hist. of Higher Education in Mass.* (*U. S. Bureau of Education, Circular of Information*, 1891, no. 6), ch. 9.

A. D. 1793-1812.—New York.—Hamilton College.—This college, at Clinton, in Oneida County, N. Y., had its beginning in an academy, founded by the Rev. Samuel Kirkland, who had labored as a missionary among the Oneida Indians. It was chartered, as the Hamilton Oneida Academy, in 1793; the corner-stone of a building for its use was laid by Baron Steuben in the following year; but the school was not opened until 1798. The academy became Hamilton College in 1812.

A. D. 1794.—Maine.—Bowdoin College.—"An act of the Legislature of the province of Maine, approved in 1794, incorporated the above-named institution. . . . That the institution might not want for proper support, it was further enacted, 'That the clear rents, issues, and profits of all the estate, real and personal, of which the said corporation shall be seized or possessed, shall be appropriated to the endowment of the said college, in such manner as will most effectually promote virtue, piety, and the knowledge of such of the languages and the useful and liberal arts and sciences as shall hereafter be directed from time to time by said corporation.' Five townships of land, each six miles square, were granted to the college for its endowment and vested in the trustees, provided that fifteen families be settled in each of the said townships within a period of twelve years, and provided further that three lots containing 320 acres each be reserved, one for the first settled minister, one for the use of the ministry, and one for the support of schools within the township where it is located. These townships were to be laid out and assigned from any of the unappropriated lands belonging to the commonwealth of the district of Maine. The first money endowment was instituted by a general law of Massachusetts, approved February 24, 1814, which reads as follows: 'Be it enacted by the Senate and House of Representatives in General Court now assembled, That the tax which the president, directors, and

company of the Massachusetts Bank are and shall be liable to pay to the commonwealth, shall be and hereby is granted to and appropriated as follows, viz: ten-sixteenths parts thereof to the president and fellows of Harvard College; and three-sixteenths parts thereof to the president and trustees of Williams College; and three-sixteenths thereof to the president and trustees of Bowdoin College."—F. W. Blackmar, *Hist. of Federal and State Aid to Higher Education in the U. S. (Bureau of Education, Circular of Information, 1890, no. 1), pp. 123-124.*—The college was named in honor of Governor James Bowdoin, of Massachusetts, whose son made valuable gifts to it.

A. D. 1795.—New York.—Union College.—Union College, founded at Schenectady, in 1795, had a struggle for existence until the Rev. Dr. Eliphalet Nott was called to its presidency, 1804. By the energy and influence of Dr. Nott, State aid was obtained and funds were raised by other means, until a fairly substantial endowment was secured. Among the methods employed in creating this endowment was a series of lottery drawings, which were not entirely closed until 1833.—C. F. Richardson and H. A. Clark, *The College Book, Union College.*

A. D. 1795-1867.—The United States.—State School Funds.—"Connecticut took the lead in the creation of a permanent fund for the support of schools. The district known as the Western Reserve, in Northern Ohio, had been secured to her in the adjustment of her claims to lands confirmed to her by the charter of King Charles II. The Legislature of the State, in 1795, passed an act directing the sale of all the land embraced in the Reserve, and setting apart the avails as a perpetual fund for the maintenance of common schools. The amount realized was about \$1,120,000. . . . New York was the next State to establish a common school fund for the aid and maintenance of schools in the several school districts of the State. The other Northern States except New Hampshire, Vermont, Pennsylvania, and one or two others, have established similar funds. . . . In all the new States, the 500,000 acres given by act of Congress, on their admission into the Union, for the support of schools, have been sacredly set apart for that purpose, and generally other lands belonging to the States have been added to the fund. . . . Prior to the war the Slave States had made attempts to establish plans for popular education, but with results of an unsatisfactory character. In Virginia a school system was in force for the education of the children of indigent white persons. In North Carolina a large school fund, exceeding two millions of dollars, had been set apart for the maintenance of schools. In all of these States common schools had been introduced, but they did not flourish as in the North and West. . . . There was not the same population of small and independent farmers, whose families could be united into a school district. . . . A more serious obstacle was the slave population, constituting one-third of the whole, and in some of the States more than half, whom it was thought dangerous to educate."—V. M. Rice, *Special Report on the Present State of Education, 1867, pp. 19-23.*

A. D. 1796.—Virginia.—Washington and Lee University.—This institution, at Lexington, Va., has grown from an academy, estab-

lished at an early day at Greenville, Va., but moved to Lexington in 1785. In 1796 it received a large gift of land from George Washington, and assumed a new character, taking the name of Washington College. In 1865, at the close of the Civil War, Gen. Robert E. Lee became its president, and on his death, in 1870, it was given its present name.

A. D. 1802.—United States.—Military Academy.—See WEST POINT.

A. D. 1804-1837.—Michigan.—The University.—"In 1804, when Michigan was organized as a Territory, Congress granted a township of land for a seminary of learning, and the university to be established in 1817 was to be in accordance with this grant. The territorial government committed the interests of higher education to the care of the Governor and the Judges, and it is supposed that through the exertions of Hon. A. B. Woodward, then presiding Judge of the Supreme Court of the Territory of Michigan, the act establishing a university was framed. A portion of this most curious document of the early history of Michigan will be given. It is entitled 'An act to establish the Catholepistemiad or University Michigania.' 'Be it enacted by the Governor and Judges of the Territory of Michigan, That there shall be in the said Territory a catholepistemiad or university denominated the Catholepistemiad or University Michigania. The Catholepistemiad or University of Michigania shall be composed of thirteen didaxum or professorships; first, a didaxia or professorship catholepistemia, or universal science, the dictator or professor of which shall be president of the institution; second, a didaxia or professorship of anthropoglossica, or literature embracing all of the epistemon or sciences relative to language; third, a didaxia or professorship of mathematica or mathematics; fourth, a didaxia or professorship of physiognostica or natural history, etc.' The act thus continues through the whole range of the 'thirteen didaxum'; the remaining nine are as follows: Natural philosophy, astronomy, chemistry, medical sciences, economical sciences, ethical sciences, military sciences, historical sciences, and intellectual. The university was to be under the control of the professors and president, who were to be appointed by the Governor, while the institution was to be the center and controlling power of the educational system of the State. It was to be supported by taxation by an increase of the amount of taxes already levied, by 15 per cent. Also power was given to raise money for the support of the university by means of lotteries. This remarkable document was not without its influence in shaping the public school policy of Michigan, but it was many years before the State approximated its learned provisions. Impracticable as this educational plan appears for a handful of people in the woods of Michigan, it served as a foundation upon which to build. The officers and president were duly appointed, and the work of the new university began at once. At first the university appeared as a school board, to establish and maintain primary schools which they held under their charge. Then followed a course of study for classical academies, and finally, in October, 1817, an act was passed establishing a college in the city of Detroit called 'The First College of Michigania.' . . . The people contributed liber-

ally to these early schools, the sum of three thousand dollars being subscribed at the beginning. . . . An act was passed on the 30th of April, 1821, by the Governor and Judges establishing a university in Detroit to take the place of the catholepistemiad and to be called the 'University of Michigan.' In its charter nearly all the powers of the former institution were substantially confirmed, except the provision for taxes and lotteries. . . . The second corporation, known as the 'University of Michigan,' carried on the work of education already begun from 1821 to the third organization, in 1837. The education was very limited, consisting in one classical academy at Detroit, and part of the time a Lancasterian school. The boards of education kept up and transmitted the university idea to such an extent that it may be said truly and legally that there was one University of Michigan, which passed through three successive stages of development marked by the dates 1817, 1821, and 1837," at which time it was removed to Ann Arbor.—F. W. Blackmar, *Federal and State Aid to Higher Education* (U. S. Bureau of Education, *Circular of Information*, 1890, no. 1), pp. 239-241.

A. D. 1818-1821.—Massachusetts.—Amherst College.—"Amherst College originated in a strong desire on the part of the people of Massachusetts to have a college near the central part of the State, where the students should be free from the temptations of a large city, where the expenses of an education should not be beyond the means of those who had but little money, and where the moral and religious influences should be of a decidedly Christian character. . . . The ministers of Franklin County, at a meeting held in Shelburne, May 18, 1815, expressed it as their opinion that a literary institution of high order ought to be established in Hampshire County, and that the town of Amherst appeared to them to be the most eligible place for it. Their early efforts for a literary institution in Hampshire County resulted in the first place in the establishment of an academy in Amherst, which was incorporated in the year 1816. . . . In the year 1818 a constitution was adopted by the trustees of Amherst Academy, for the raising and management of a fund of at least \$50,000, for the classical education of indigent young men of piety and talents for the Christian ministry. . . . This charity fund may be said to be the basis of Amherst College, for though it was raised by the trustees of Amherst Academy it was really intended to be the foundation of a college, and has always been a part of the permanent funds of Amherst College, kept sacredly from all other funds for the specific object for which it was given. . . . This was for many years the only permanent fund of Amherst College, and without this it would have seemed impossible at one time to preserve the very existence of the college. So Amherst College grew out of Amherst Academy, and was built permanently on the charity fund raised by the trustees of that academy. . . . Although the charity fund of \$50,000 had been received in 1818, it was not till 1820 that the recipient felt justified in going forward to erect buildings for a college in Amherst. Efforts were made for the removal of Williams College from

Williamstown to Hampshire County, and to have the charity fund used in connection with that college; and, if that were done, it was not certain that Amherst could be regarded as the best location for the college. But the Legislature of Massachusetts decided that Williams College could not be removed from Williamstown, and nothing remained but for the friends of the new institution to go on with their plans for locating it at Amherst. . . . This first college edifice was ready for occupation and dedicated on the 18th of September, 1821. In the month of May, 1821, Rev. Zephaniah Swift Moore, D. D., was unanimously elected by the trustees of Amherst Academy president of the new institution."—T. P. Field, *Hist. of Higher Education in Mass.* (U. S. Bureau of Education, *Circular of Information*, 1891, no. 6), ch. 11.

A. D. 1824-1893.—The United States.—Technical Education.—Schools specialized for different branches of a technically scientific education (especially in the department of engineering, civil, mechanical, and electrical) are now embraced in almost every university of considerable rank; but many of that class have risen independently, mostly within recent years. The oldest of importance is the Rensselaer Institute, at Troy, founded in 1824. The Massachusetts Institute of Technology, at Boston, was opened in 1865; Stevens Institute, at Hoboken, N. J., in 1867; Pratt Institute, at Brooklyn, N. Y., founded in 1884; Drexel Institute, at Philadelphia, in 1891, and Armour Institute, at Chicago, in 1893, are younger schools for technical training, munificently equipped and endowed by the liberality of private citizens.

A. D. 1832.—Ohio.—Oberlin College.—"Oberlin is a development from the missionary and reform movements of the early quarter of our century. . . . The founders were themselves home missionaries in the West and among the Indians, and Oberlin has ever since been vital with the missionary spirit. From the first, alcoholic beverages have been excluded. Although not adopting the extreme doctrine of woman's rights, yet Oberlin was the first college in the world to admit young women to all its privileges on equal terms with young men; and as for its anti-slavery leanings, it had received colored students into its classes 28 years before emancipation. Such bold disregard of the old landmarks was not attractive to the power and wealth of the country, and so for 50 years Oberlin owed its life to the sacrifice and devotion of its founders and instructors. . . . In 1831 John J. Shipherd, under commission from the American Home Missionary Society, entered upon his work as pastor of the church at Elyria, Ohio. . . . In the summer of 1832 he was visited by Philo P. Stewart, an old school friend in the days when they both attended the academy at Pawlet, Vt. Stewart, on account of the failing health of his wife, had returned from mission work among the Choctaws in Mississippi, but his heart was still burning with zeal for extending Christian work in the West. The two men, after long consultations and prayer, finally concluded that the needs of the new country could best be met by establishing a community of Christian families with a Christian school. . . . the school to be conducted on the manual labor system, and to be open to both young men and young women. It was not proposed to establish

a college, but simply an academy for instruction in English and useful languages, and, if Providence should favor it, in 'practical theology.' In accordance with this plan the corporate name 'Oberlin Collegiate Institute' was chosen. Not until 1851 was a new and broader charter obtained, this time under the name of 'Oberlin College.' The name 'Oberlin' was chosen to signify the hope that the members of the new enterprise might be moved by the spirit of the self-sacrificing Swiss colporteur and pastor, John Friederich Oberlin."—J. R. Commons, *Oberlin College (Bureau of Education, Circular of Information, 1891, no. 5), pp. 55-56.*

A. D. 1837.—Massachusetts.—Horace Mann and the State System.—"When Massachusetts, in 1837, created a Board of Education, then were first united into a somewhat related whole the more or less excellent but varied and independent organizations, and a beginning made for a State system. It was this massing of forces, and the hearty co-operation he initiated, in which the work of Horace Mann showed its matchless greatness. 'Rarely,' it has been said, 'have great ability, unselfish devotion, and brilliant success been so united in the course of a single life.' A successful lawyer, a member of the State Legislature, and with but limited experience as a teacher, he has left his impress upon the educational sentiments of, not only New England, but the United States."—R. G. Boone, *Education in the U. S., p. 103.*

A. D. 1840-1886.—The United States.—Proportion of College Students.—"It is estimated that in 1840 the proportion of college students to the entire population in the United States was 1 to 1,540; in 1860, 1 to 2,012; in 1870, 1 to 2,546; in 1880, 1 to 1,840; and in 1886, 1 to about 1,400. Estimating all our combined efforts in favor of higher education, we fall far short of some of the countries of the Old World."—F. W. Blackmar, *Federal and State Aid to Higher Education in the U. S. (U. S. Bureau of Education, Circulars of Information, 1890, no. 1), p. 36.*

A. D. 1844-1876.—Canada.—Ontario School System.—"From the earliest settlement of Ontario, schools were established as the wants of the inhabitants required. The Legislature soon recognized the needs of the country, and made grants of land and money in aid of elementary, secondary, and superior education. Statutes were passed from time to time for the purpose of opening schools to meet the demands of the people. The sparsely settled condition of the Province delayed for a while the organization of the system. It was not until 1844 that the elementary schools were put on a comprehensive basis. In that year the Rev. Egerton Ryerson, LL. D., was appointed Chief Superintendent of Education, and the report which he presented to the House of Assembly sketched in an able manner the main features of the system of which he was the distinguished founder, and of which he continued for thirty-three years to be the efficient administrator. In 1876 the office of chief superintendent was abolished, and the schools of the Province placed under the control of a member of the Government with the title of Minister of Education. . . . The system of education in Ontario may be said to combine the best features of the systems of several countries. To the Old World it is indebted for a large measure of its stability, uniformity and centralization; to the older settled

parts of the New World for its popular nature, its flexibility, and its democratic principles, which have given, wherever desirable, local control and individual responsibility. From the State of New York we have borrowed the machinery of our school; from Massachusetts the principle of local taxation; from Ireland our first series of textbooks; from Scotland the co-operation of parents with the teacher, in upholding his authority; from Germany the system of Normal Schools and the Kindergarten; and from the United States generally the non-denominational character of elementary, secondary, and university education. Ontario may claim to have some features of her system that are largely her own. Among them may be mentioned: a division of state and municipal authority on a judicious basis; clear lines separating the function of the University from that of the High Schools, and the function of the High Schools from that of the Public or elementary schools; a uniform course of study; all High and Public Schools in the hands of professionally trained teachers; no person eligible to the position of inspector who does not hold the highest grade of a teacher's certificate, and who has not had years of experience as a teacher; inspectors removable if inefficient, but not subject to removal by popular vote; the examinations of teachers under Provincial instead of local control; the acceptance of a common matriculation examination for admission to the Universities and to the learned professions; a uniform series of text books for the whole Province; the almost entire absence of party politics in the manner in which school boards, inspectors, and teachers discharge their duties; the system national instead of sectarian, but affording under constitutional guarantees and limitations protection to Roman Catholic and Protestant Separate Schools and denominational Universities."—J. Millar, *Educational System of the Province of Ontario.*

A. D. 1845.—The United States.—The Naval Academy.—"In 1845, Mr. George Bancroft, then Secretary of the Navy, issued instructions to Commodore Franklin Buchanan to open a naval school at Fort Severn, Annapolis. Previous attempts to organize the teaching and training of midshipmen in such a school instead of on ship-board had failed; this one obtained success. In 1849 "the institution was reorganized on the general plan of the Military Academy at West Point, and its name was changed from the Naval School to the United States Naval Academy."

A. D. 1845-1847.—Louisiana.—Tulane University.—"This institution had its origin in certain land grants [1806 and 1811] made by the United States 'for the use of a seminary of learning.' The first movement toward the utilization of these grants was made in 1845, when the following clause was adopted in the amended Constitution: 'A university shall be established in the city of New Orleans. It shall be composed of four faculties, to wit: one of law, one of medicine, one of natural sciences, and one of letters.' . . . The university was chartered in 1847. . . . For many years the university received but meagre support from the State. . . . By the Constitution of 1879 the institution was endowed permanently by authorizing the sum of not more than \$10,000 payable annually [for five years] to the university. At the expiration of this period the university was united with the Tulane University (in 1884). Since that time no

appropriations have been made by the Legislature."—F. W. Blackmar, *Hist. of Federal and State Aid to Higher Education in the U. S.* (Bureau of Education, Circular of Information, 1890, no. 1, pp. 272-273).

A. D. 1848.—Pennsylvania.—Girard College.—By the will of Stephen Girard, a large endowment of money was given for a college to educate poor white male orphans, in the city of Philadelphia. Girard died in 1831, but it was not until 1848 that the college was opened, in a splendid marble building, surrounded by extensive grounds.

A. D. 1850.—Wisconsin, The University of. See WISCONSIN UNIVERSITY.

A. D. 1862.—The United States.—Land-grant for Industrial Colleges.—"Next to the Ordinance of 1787, the Congressional grant of 1862 is the most important educational enactment in America. . . . By this gift forty-eight colleges and universities have received aid, at least to the extent of the Congressional grant; thirty-three of these, at least, have been called into existence by means of this act. In thirteen States the proceeds of the land scrip were devoted to institutions already in existence. The amount received from the sales of land scrip from twenty-four of these States aggregates the sum of \$13,930,456, with land remaining unsold estimated at nearly two millions of dollars. These same institutions have received State endowments amounting to over eight million dollars. The origin of this gift must be sought in local communities. In this country all ideas of national education have arisen from those States that have felt the need of local institutions for the education of youth. In certain sections of the Union, particularly the North and West, where agriculture was one of the chief industries, it was felt that the old classical schools were not broad enough to cover all the wants of education represented by growing industries. There was consequently a revulsion from these schools toward the industrial and practical side of education. Evidences of this movement are seen in the attempts in different States to found agricultural, technical, and industrial schools. These ideas found their way into Congress, and a bill was introduced in 1858, which provided for the endowment of colleges for the teaching of agriculture and the mechanical arts. The bill was introduced by Hon. Justin S. Morrill, of Vermont; it was passed by a small majority, and was vetoed by President Buchanan. In 1862 the bill was again presented with slight changes, passed and signed, and became a law July 2, 1862. . . . It stipulated to grant to each State thirty thousand acres of land for each Senator and Representative in Congress to which the States were respectively entitled by the census of 1860, for the purpose of endowing 'at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the Legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life.' . . . From this proposition all sorts of schools sprang up, according to the local conception of the law and local demands. It was thought by some that

boys were to be taught agriculture by working on a farm, and purely agricultural schools were founded with the mechanical arts attached. In other States classical schools of the stereotyped order were established, with more or less science; and, again, the endowment in others was devoted to scientific departments. The instruction of the farm and the teaching of pure agriculture have not succeeded in general, while the schools that have made prominent those studies relating to agriculture and the mechanic arts, upon the whole, have succeeded best. . . . In several instances the managers of the land scrip have understood that by this provision the State could not locate the land within the borders of another State, but its assignees could thus locate lands, not more than one million acres in any one State. By considering this question, the New York land scrip was bought by Ezra Cornell, and located by him for the college in valuable lands in the State of Wisconsin, and thus the fund was augmented. However, the majority of the States sold their land at a sacrifice, frequently for less than half its value. There was a lull in the land market during the Civil War, and this cause, together with the lack of attention in many States, sacrificed the gift of the Federal Government. The sales ranged all the way from fifty cents to seven dollars per acre, as the average price for each State."—F. W. Blackmar, *Federal and State Aid to Higher Education* (U. S. Bureau of Education, Circulars of Information, 1890, no. 1, pp. 47-49).

A. D. 1862-1886.—New York.—Cornell University.—"On the second of July, 1862, . . . [President Lincoln] signed the act of congress, [see the preceding article] donating public lands for the establishment of colleges of agriculture and mechanic arts. This act had been introduced into congress by the Hon. Justin S. Morrill. . . . The Morrill act provided for a donation of public land to the several states, each state to receive thirty thousand acres for each senator and representative it sent to congress. States not containing within their own borders public land subject to sale at private entry received land scrip instead. But this land scrip the recipient states were not allowed to locate within the limits of any other state or of any territory of the United States. The act laconically directed 'said scrip to be sold by said states.' The proceeds of the sale, whether of land or scrip, in each state were to form a perpetual fund. . . . In the execution of this trust the State of New York was hampered by great and almost insuperable obstacles. For its distributive share it received land scrip to the amount of nine hundred and ninety thousand acres. The munificence of the endowment awakened the cupidity of a multitude of clamorous and strangely unexpected claimants. . . . If the princely domain granted to the State of New York by congress was not divided and frittered away, we owe it in great measure to the foresight, the energy, and the splendid courage of a few generous spirits in the legislature, of whom none commanded greater respect or exercised more influence than Senator Andrew Dickson White, the gentleman who afterwards became first president of Cornell University. . . . But the all-compelling force which prevented the dispersion and dissipation of the bounty of congress was the generous heart of Ezra Cornell. While rival institutions

clamored for a division of the 'spoils,' and political tricksters played their base and desperate game, this man thought only of the highest good of the State of New York, which he loved with the ardor of a patriot and was yet to serve with the heroism of a martyr. . . . When the legislature of the State of New York was called upon to make some disposition of the congressional grant, Ezra Cornell sat in the senate. . . . Of his minor legislative achievements I shall not speak. One act, however, has made his name as immortal as the state it glorified. By a gift of half a million dollars (a vast sum in 1865, the last year of the war!) he rescued for the higher education of New York the undivided grant of congress; and with the united endowments he induced the legislature to establish, not merely a college of applied science, but a great modern university—'an institution,' according to his own admirable definition, 'where any person can find instruction in any study.' It was a high and daring aspiration to crown the educational system of our imperial state with an organ of universal knowledge, a nursery of every science and of all scholarship, an instrument of liberal culture and of practical utility to all classes of our people. This was, however, the end; and to secure it Ezra Cornell added to his original gift new donations of land, of buildings, and of money. . . . But one danger threatened this latest birth of time. The act of congress donating land scrip required the states to sell it. The markets were immediately glutted. Prices fell. New York was selling at an average price of fifty cents an acre. Her princely domain would bring at this rate less than half a million dollars! Was the splendid donation to issue in such disaster? If it could be held till the war was over, till immigration opened up the Northwest, it would be worth five times five hundred thousand dollars! So at least thought one far-seeing man in the State of New York. And this man of foresight had the heart to conceive, the wisdom to devise, and the courage to execute—he alone in all the states—a plan for saving to his state the future value of the lands donated by congress. Ezra Cornell made that wonderful and dramatic contract with the State of New York! He bound himself to purchase at the rate of sixty cents per acre the entire right of the commonwealth to the scrip, still unsold; and with the scrip, thus purchased by him as an individual, he agreed to select and locate the lands it represented, to pay the taxes, to guard against trespasses and defend from fires, to the end that within twenty years, when values had appreciated, he might sell the land and turn into the treasury of the State of New York for the support of Cornell University, the entire net proceeds of the enterprise. Within a few years Ezra Cornell had located over half a million acres of superior pine land in the Northwestern states, principally in Wisconsin. Under bonds to the State of New York to do the state's work, he had spent about \$600,000 of his own cash to carry out the trust committed to him by the state, when, alas, in the crisis of 1874, fortune and credit sank exhausted, and death came to free the martyr-patriot from his bonds. The seven years that followed were the darkest in our history. . . . Ezra Cornell was our founder; Henry W. Sage followed him as wise masterbuilder. The edifices, chairs, and libraries which bear the name of 'Sage' witness to [his]

later gifts; but though these now aggregate the princely sum of \$1,250,000, [his] management of the university lands has been [his] greatest achievement. From these lands, with which the generosity and foresight of Ezra Cornell endowed the university, there have been netted under [Mr. Sage's] administration, not far short of \$4,000,000, with over 100,000 acres still to sell. Ezra Cornell's contract with the state was for twenty years. It expired August 4, 1886, when a ten years' extension was granted by the state. The trust will be closed in 1896."—J. G. Schurman. *Address at Inauguration to the Presidency of Cornell University, Nov. 11, 1892.*

A. D. 1865-1881.—The United States.—Education of the Freedmen.—Since the close of the Civil War, much has been done (and much more needs to be done) for the education of the colored people of the South. To that end, a number of institutions, having aims beyond those of the common school, have risen already in the South, or on the southern border. First among them in time was the Fisk University, founded at Nashville, in 1865. The Howard University, at Washington, was created in 1867. Hampton Institute, a training school for negroes and Indians, was established by Gen. S. C. Armstrong, at Hampton, Va., in 1868. Claflin University, at Orangeburg, S. C., was founded in 1872. Booker T. Washington, born a slave, having obtained an education at Hampton Institute, and resolved to devote his life to the uplifting of his race, opened a training school (the Tuskegee Normal and Industrial Institute) at Tuskegee, Alabama, which is growing with remarkable success, and which promises to have a notable influence in the development of the colored people. A large and important work in this field of education is being carried on by the American Missionary Association, which is also giving careful attention to the educational needs of the interesting body of southern whites known as "the mountain people," in West Virginia, western North Carolina, eastern Tennessee, southeastern Kentucky, and northern Georgia. Fisk University is one of the higher institutions of learning which depend more or less on support from this Association. Others of the higher class are Talladega College, in Alabama; Tougaloo University, in Mississippi; Straight University, at New Orleans; Tillotson Institute, at Austin, Texas. It maintains normal and industrial schools at Wilmington, N. C.; at Charleston, S. C.; at Savannah, Atlanta, Macon, and McIntosh, Ga.; at Mobile, Athens, and Selma, Ala.; at Memphis, Tenn.; at Lexington, Ky. Its primary and parochial schools are numerous and widely distributed. Industrial training, to a greater or less extent, is given in nearly all of its schools. On a less extensive scale, similar work is being done in the South by various churches and other bodies.

A. D. 1866-1869.—The United States.—Bureau of Education.—"Educators, political economists, and statesmen felt the need of some central agency by which the general educational statistics of the country could be collected, preserved, condensed, and properly arranged for distribution. This need found expression finally in the action taken at a convention of the superintendence department of the National Educational Association, held at Washington, February, 1866, when it was resolved to petition Congress

in favor of a National Bureau of Education. . . . The memorial was presented in the House of Representatives by General Garfield, February 14, 1866, with a bill for the establishment of a National Bureau on essentially the basis the school superintendents had proposed. Both bill and memorial were referred to a committee of seven members. . . . The bill was reported back from the committee, with an amendment in the nature of a substitute, providing for the creation of a department of education instead of the bureau originally proposed. Thus altered, it was passed by a vote of nearly two to one. In the Senate it was referred to the Committee on the Judiciary . . . who the following winter reported it without amendment and with a recommendation that it pass, which it did on the 1st of March, 1867, receiving on the next day the approval of the President. By the act of July 28, 1868, which took effect June 30, 1869, the Department of Education was abolished, and an Office of Education in the Department of the Interior was established, with the same objects and duties. . . . The act of March 2, 1867, . . . established an agency 'for the purpose of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories, and of diffusing such information respecting the organization and management of school systems and methods of teaching as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education.' It will be perceived that the chief duty of the office under the law is to act as an educational exchange. Exercising and seeking to exercise no control whatever over its thousands of correspondents, the office occupies a position as the recipient of voluntary information which is unique."—C. Warren, *Answers to Inquiries about the U. S. Bureau of Education*, ch. 2-3.

A. D. 1867.—New York.—Public Schools made entirely free.—The public schools of the State of New York were not entirely free until 1867. In his report to the Legislature made in February of that year, the State Superintendent of Public Instruction, Hon. Victor M. Rice, said: "The greatest defect in our school system is, as I have urged in previous reports, the continuance of the rate bill system. Our common schools can never reach their highest degree of usefulness until they shall have been made entirely free. . . . To meet this public demand, to confer upon the children of the State the blessings of free education, a bill has already been introduced into your honorable body. . . . The main features of the bill are the provisions to raise, by State tax, a sum about equal to that raised in the districts by rate bills, and to abolish the rate bill system; to facilitate the erection and repair of school houses." The bill referred to was passed at the same session of the Legislature, and in his next succeeding report, Superintendent Rice gave the following account of the law and its immediate effects: "While the general structure of the school law was not disturbed, a material modification was made by the Act (chap. 406, Laws of 1867), which took effect on the first day of October of the same year, and which, among other things, provided for the abolishment of rate-bills, and for increased local and State taxation for school purposes. This was primarily a change

in the manner of raising the requisite funds; not an absolute increase of the aggregate amount to be raised. It involved and encouraged such increase, so far as the inhabitants in the several school districts should authorize it, by substituting taxation exclusively on property, for a mixed assessment which, in part, was a tax on attendance. Thus relieved of an old impediment, and supplied with additional power and larger resources, the cause of public instruction, during the last fiscal year, has wrought results unequalled in all the past. . . . The effect of this amendment has not been confined to the financial policy thereby inaugurated. It is distinctly traceable in lengthened terms of school, in a larger and more uniform attendance, and in more liberal expenditures for school buildings and appliances.' —Supt. of Pub. Instruction of the State of N. Y., *Annual Report*, 1869, pp. 5-6.

A. D. 1867.—Maryland.—Johns Hopkins University.—"By the will of Johns Hopkins, a merchant of Baltimore, the sum of \$7,000,000 was devoted to the endowment of a university [chartered in 1867] and a hospital, \$3,500,000 being appropriated to each. . . . To the bequest no burdensome conditions were attached. . . . Just what this new university was to be proved a very serious question to the trustees. The conditions of Mr. Hopkins's bequest left the determination of this matter open. . . . A careful investigation led the trustees to believe that there was a growing demand for opportunities to study beyond the ordinary courses of a college or a scientific school, particularly in those branches of learning not included in the schools of law, medicine and theology. Strong evidence of this demand was afforded by the increasing attendance of American students upon the lectures of the German universities, as well as by the number of students who were enrolling themselves at Harvard and Yale for the post-graduate courses. It was therefore determined that the Johns Hopkins should be primarily a university, with advanced courses of lectures and fully equipped laboratories; that the courses should be voluntary, and the teaching not limited to class instruction. The foundation is both old and new. In so far as each feature is borrowed from some older university, where it has been fairly tried and tested, it is old, but at the same time this particular combination of separate features has here been made for the first time. . . . In the ordinary college course, if a young man happens to be deficient in mathematics, for example, he is either forced to lose any advantage he may possess in Greek or Latin, or else is obliged to take a position in mathematics for which he is unprepared. In the college department of the Johns Hopkins, this disadvantage does not exist; the classifying is specific for each study. The student has also the privilege of pushing forward in any one study as rapidly as he can with advantage; or, on the other hand, in case of illness or of unavoidable interruption, of prolonging the time devoted to the course, so that no part of it shall be omitted. As the studies are elective, it is possible to follow the usual college course if one desires. Seven different courses of study are indicated, any of which leads to the Baccalaureate degree, thus enabling the student to direct and specialize his work. The same standard of matriculation and the same severity of examinations are maintained in all these courses. A

student has the privilege of extending his study beyond the regular class work, and he will be credited with all such private and outside study, if his examiners are satisfied of his thoroughness and accuracy."—S. B. Herrick, *The Johns Hopkins University* (Scribner's Monthly, Dec. 1879).

A. D. 1867-1891.—The United States.—The Peabody Education Fund.—"The letter announcing and creating the Peabody endowment was dated February 7, 1867. In that letter, after referring to the ravages of the late war, the founder of the Trust said: 'I feel most deeply that it is the duty and privilege of the more favoured and wealthy portions of our nation to assist those who are less fortunate.' He then added: 'I give one million of dollars for the encouragement and promotion of intellectual, moral, and industrial education among the young of the more destitute portions of the Southern and Southwestern States of the Union.' On the day following, ten of the Trustees selected by him held a preliminary meeting in Washington. Their first business meeting was held in the city of New York, the 19th of March following, at which a general plan was adopted and an agent appointed. Mr. Peabody returned to his native country again in 1869, and on the first day of July, at a special meeting of the Trustees held at Newport, added a second million to the cash capital of the fund. . . . According to the donor's directions, the principal must remain intact for thirty years. The Trustees are not authorized to expend any part of it, nor yet to add to it any part of the accruing interest. The manner of using the interest, as well as the final distribution of the principal, was left entirely to the discretion of a self-perpetuating body of Trustees. Those first appointed had, however, the rare advantage of full consultation with the founder of the Trust while he still lived, and their plans received his cordial and emphatic approbation. . . . The pressing need of the present seemed to be in the department of primary education for the masses, and so they determined to make appropriations only for the assistance of public free schools."—*Am. Educational Cyclopædia*, 1875, pp. 224-225.—The report made by the treasurer of the Fund, in 1890, showed a principal sum invested to the amount of \$2,075,175.22, yielding an income that year of \$97,818. In the annual report of the U. S. Commissioner of Education made Feb. 1, 1891, he says: "It would appear to the student of education in the Southern States that the practical wisdom in the administration of the Peabody Fund and the fruitful results that have followed it could not be surpassed in the history of endowments."—*Proceedings of the Trustees of the Peabody Education Fund*, 1887-1892.

A. D. 1874.—New York.—The Chautauqua Assembly and Circle.—The Chautauqua Assembly, holding sessions in July and August of each year, on grounds extensively and expensively prepared for its use, on Chautauqua Lake, in western New York, was instituted in 1874, by the Rev. Dr. (afterwards Bishop) John H. Vincent, of the M. E. Church, and Mr. Lewis Miller. Its allied Chautauqua Literary and Scientific Circle was organized in 1878. Together, they constitute a great popular university, for summer lectures and home study, systematically pursued. A new educational agency, of vast influence, has thus been introduced; and the idea

of its organization is being fruitfully carried out in many less notable assemblies, of like purpose, both in America and abroad.

A. D. 1884-1891.—California.—Leland Stanford Junior University.—"The founding at Palo Alto of 'a university for both sexes, with the colleges, schools, seminaries of learning, mechanical institutes, museums, galleries of art, and all other things necessary and appropriate to a university of high degree,' was determined upon by the Hon. Leland Stanford and Jane Lathrop Stanford in 1884. In March of the year following the Legislature of California passed an Act providing for the administration of trust funds in connection with institutions of learning. November 14, 1885, the Grant of Endowment was publicly made in accordance with this Act, and on the same day, the Board of Trustees held its first meeting in San Francisco. The work of construction was at once begun, and the cornerstone laid May 14, 1887. The University was formally opened to students October 1, 1891. The idea of the university, in the words of its founders, 'came directly and largely from our son and only child, Leland, and in the belief that had he been spared to advise as to the disposition of our estate, he would have desired the devotion of a large portion thereof to this purpose, we will that for all time to come the institution hereby founded shall bear his name, and shall be known as The Leland Stanford Junior University.' The object of the University, as stated in its Charter, is 'to qualify students for personal success and direct usefulness in life'; and its purposes, 'to promote the public welfare by exercising an influence in behalf of humanity and civilization, teaching the blessings of liberty regulated by law, and inculcating love and reverence for the great principles of government as derived from the inalienable rights of man to life, liberty, and the pursuit of happiness.' The University is located on the Palo Alto estate in the Santa Clara valley, thirty-three miles southeast of San Francisco, on the Coast Division of the Southern Pacific Railway. The estate consists of over eight thousand acres, partly lowland and partly rising into the foothills of the Santa Cruz range. On the grounds is the residence of the Founders, and an extensive and beautiful arboretum containing a very great variety of shrubs and trees. The property conveyed to the University, in addition to the Palo Alto estate, consists of the Vina estate, in Tehama County, of fifty-five thousand acres, of which about four thousand acres are planted in vines, and the Gridley estate, in Butte County, of twenty-two thousand acres, devoted mainly to the raising of wheat. . . . The founders of the Leland Stanford Junior University say: 'As a further assurance that the endowment will be ample to establish and maintain a university of the highest grade, we have, by last will and testament, devised to you and your successors additional property. We have done this as a security against the uncertainty of life and in the hope that during our lives the full endowment may go to you.' The aggregate of the domain thus dedicated to the founding of the University, is over eighty-five thousand acres, or more than one hundred and thirty-three square miles, among the best improved and most valuable lands in the State."—Leland Stanford Junior University, *Circulars of Information*, nos. 6 and 1-2.

A. D. 1887-1889.—Massachusetts.—Clark University.—"Clark University was founded [at Worcester] by . . . a native of Worcester County, Massachusetts. It was 'not the outcome of a freak of impulse, or of a sudden wave of generosity, or of the natural desire to perpetuate in a worthy way one's ancestral name. To comprehend the genesis of the enterprise we must go back along the track of Mr. Clark's personal history 20 years at least. For as long ago as that, the idea came home with force to his mind that all civilized communities are in the hands of experts. . . . Looking around at the facilities obtainable in this country for the prosecution of original research, he was struck with the meagerness and the inadequacy. Colleges and professional schools we have in abundance, but there appeared to be no one grand inclusive institution, unsaddled by an academic department, where students might pursue as far as possible their investigation of any and every branch of science. . . . Mr. Clark went abroad and spent eight years visiting the institutions of learning in almost every country of Europe. He studied into their history and observed their present working.' . . . It is his strong and expressed desire that the highest possible academic standards be here forever maintained; that special opportunities and inducements be offered to research; that to this end the instructors be not overburdened with teaching or examinations. . . . A charter was granted early in 1887. Land and other property that had been before secured by the founder was transferred to the board, and the erection of a central building was begun. In the spring of 1888 G. Stanley Hall, then a professor at the Johns Hopkins University, was invited to the presidency. . . . The plans of the university had so far progressed that work was begun in October, 1889, in mathematics, physics, chemistry, biology, and psychology."—G. G. Bush, *Hist. of Higher Education in Mass. (U. S. Bureau of Education, Circular of Information, 1891, no. 6), ch. 18.*

A. D. 1889-1892.—Illinois.—Chicago University.—"At its Annual Meeting in May, 1889, the Board of the American Baptist Education Society resolved to take immediate steps toward the founding of a well-equipped college in the city of Chicago. At the same time John D. Rockefeller made a subscription of \$600,000 and this sum was increased during the succeeding year by about \$600,000 more in subscriptions representing more than two thousand persons. Three months after the completion of this subscription, Mr. Rockefeller made an additional proffer of \$1,000,000. The site of the University consists of three blocks of ground—about two thousand feet long and three hundred and sixty-two feet wide, lying between the two South Parks of Chicago, and fronting on the Midway Plaisance, which is itself a park connecting the other two. One-half of this site is a gift of Marshall Field of Chicago, and the other half has been purchased at a cost of \$132,500. At the first meeting of the Board after it had become an incorporated body, Professor William R. Harper, of Yale University, was unanimously elected President of the University. . . . It has been decided that the University will begin the work of instruction on the first day of October, 1892. . . . The work of the University shall be arranged under three general divisions, viz., The Univer-

sity Proper, The University-Extension Work, The University Publication Work."—*University of Chicago, Official Bulletin no. 1, Jan., 1891.*

A. D. 1890.—United States.—Census Statistics.—The following statistics of education in the United States are from the returns gathered for the Eleventh Census, 1890. In these statistics the states and territories are classed in five great geographical divisions, defined as follows: North Atlantic Division, embracing the New England States, New York, New Jersey, and Pennsylvania; South Atlantic Division, embracing the States of the eastern coast, from Delaware to Florida, together with the District of Columbia; North Central Division, embracing Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North and South Dakota, Nebraska, and Kansas; South Central Division, embracing Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Arkansas, and Oklahoma; Western Division, embracing all the remaining States and Territories. The total taxation for public schools in the United States, as reported by this census, was \$102,164,796; of which \$37,619,786 was raised in the North Atlantic Division, \$5,678,474 in the South Atlantic Division, \$47,033,142 in the North Central Division, \$5,698,562 in the South Central Division, and \$6,134,832 in the Western Division. From funds and rents there were raised for school purposes a total of \$25,694,449 in the United States at large, of which \$8,273,147 was raised in the North Atlantic Division, \$2,307,051 in the South Atlantic Division, \$8,432,593 in the North Central Division, \$3,720,158 in the South Central Division, and \$2,961,500 in the Western Division. The total of all "ordinary" receipts for school support in the United States was \$139,619,440, of which \$49,201,216 were in the North Atlantic Division, \$8,685,223 in the South Atlantic Division, \$61,108,263 in the North Central Division, \$10,294,621 in the South Central Division, and \$10,330,117 in the Western Division. The total "ordinary expenditures" were \$138,786,393 in the whole United States; being \$47,625,548 in the North Atlantic Division, \$8,630,711 in the South Atlantic Division, \$62,815,531 in the North Central Division, \$9,860,059 in the South Central Division, and \$9,854,544 in the Western Division. For teachers' wages there was a total expenditure of \$88,705,992, \$28,067,821 being in the North Atlantic Division, \$6,400,063 in the South Atlantic Division, \$39,866,831 in the North Central Division, \$8,209,509 in the South Central Division, and \$6,161,768 in the Western Division. The total expenditure for Libraries and Apparatus was \$1,667,787, three-fourths of which was in the North Atlantic and North Central Divisions. The expenditure reported for construction and care of buildings, was \$24,224,793, of which \$10,687,114 was in the North Atlantic Division, \$884,277 was in the South Atlantic Division, \$9,869,489 in the North Central Division, \$770,257 in the South Central Division, and \$2,013,656 in the Western Division. Reported estimates of the value of buildings and other school property are incomplete, but \$27,892,831 are given for Massachusetts, \$41,626,735 for New York, \$35,435,412 for Pennsylvania, \$32,631,549 for Ohio, \$26,814,480 for Illinois, and these are the States that stand highest in the column. The apparent enrollment in Public Schools for the census year, reported to July, 1891, was as follows: North

Atlantic Division, 8,124,417; South Atlantic Division, 1,758,285; North Central Division, 5,032,182; South Central Division, 2,334,694; Western Division, 520,286; Total for the United States, 12,769,864, being 20.39 per cent. of the population, against 19.84 per cent. in 1880. The reported enrollment in Private Schools at the same time was: North Atlantic Division, 196,173; South Atlantic Division, 165,253; North Central Division, 187,827; South Central Division, 200,202; Western Division, 54,749; Total for the United States, 804,204. The reported enrollment in Parochial Schools was: North Atlantic Division, 311,684; South Atlantic Division, 30,869; North Central Division, 398,585; South Central Division, 41,115; Western Division, 17,349; Total for the United States, 799,602. Of this total, 626,496 were enrolled in Catholic and 151,651 in Lutheran Parochial Schools; leaving only 21,455 in the schools of all other denominations. Total enrollment reported in all schools 14,373,670. The colored public school enrollment in the Southern States was 1,288,229 in 1890, against 797,286 in 1880,—an increase of more than 61 per cent. The enrollment of whites was 3,358,527, against 2,301,804,—an increase of nearly 46 per cent. The approximate number of Public School-houses in the United States, for the census year 1890 is given at 219,992, being 42,949 in the North Atlantic Division, 32,142 in the South Atlantic Division, 97,166 in the North Central Division, 38,962 in the South Central Division, 8,773 in the Western Division. The largest number reported is 14,214 in Pennsylvania. Of 6,408 school-houses in Virginia 4,568 are for white, and 1,840 for colored children; in North Carolina, 3,973 white and 1,820 colored.

The above statistics are taken in part from the Compendium of the Eleventh Census, published in 1894, and partly from tables courteously furnished from the Census Bureau in advance of their publication.

Modern: Reforms and Movements.

A. D. 1638-1671.—Comenius.—“To know Comenius [born in Moravia, 1592] and the part he played in the seventeenth century, to appreciate this grand educational character, it would be necessary to begin by relating his life; his misfortunes; his journeys to England [1638], where Parliament invoked his aid; to Sweden [1642], where the Chancellor Oxenstiern employed him to write manuals of instruction; especially his relentless industry, his courage through exile, and the long persecutions he suffered as a member of the sect of dissenters, the Moravian Brethren; and the schools he founded at Fulneck, in Bohemia, at Lissa and at Patak, in Poland.”—G. Compayré, *The Hist. of Pedagogy*, ch. 6 (sect. 137). —“Comenius's inspiring motive, like that of all leading educationalists, was social regeneration. He believed that this could be accomplished through the school. He lived under the hallucination that by a proper arrangement of the subject-matter of instruction, and by a sound method, a certain community of thought and interests would be established among the young, which would result in social harmony and political settlement. He believed that men could be manufactured. . . . The educational spirit of the Reformers, the conviction that all—even the humblest—must be taught to know God, and Jesus Christ whom he has sent, was inherited by Come-

nus in its completeness. In this way, and in this way only, could the ills of Europe be remedied, and the progress of humanity assured. While, therefore, he sums up the educational aim under the threefold heads of Knowledge, Virtue, and Piety or Godliness, he in truth has mainly in view the last two. Knowledge is of value only in so far as it forms the only sound basis, in the eyes of a Protestant theologian, of virtue and godliness. We have to train for a hereafter. . . . By knowledge Comenius meant knowledge of nature and of man's relation to nature. It is this important characteristic of Comenius's educational system that reveals the direct influence of Bacon and his school. . . . It is in the department of Method, however, that we recognise the chief contribution of Comenius to education. The mere attempt to systematise was a great advance. In seeking, however, for foundations on which to erect a coherent system, he had to content himself with first principles which were vague and unscientific. . . . In the department of knowledge, that is to say, knowledge of the outer world, Comenius rested his method on the scholastic maxim, ‘Nihil est in intellectu quod non prius fuerit in sensu.’ This maxim he enriched with the Baconian induction, comprehended by him only in a general way. . . . From the simple to the complex, from the particular to the general, the concrete before the abstract, and all, step by step, and even by insensible degrees,—these were among his leading principles of method. But the most important of all his principles was derived from the scholastic maxim quoted above. As all is from sense, let the thing to be known be itself presented to the senses, and let every sense be engaged in the perception of it. When it is impossible, from the nature of the case, to present the object itself, place a vivid picture of it before the pupil. The mere enumeration of these few principles, even if we drop out of view all his other contributions to method and school-management, will satisfy any man familiar with all the more recent treatises on Education, that Comenius, even after giving his precursors their due, is to be regarded as the true founder of modern Method, and that he anticipates Pestalozzi and all of the same school. . . . Finally, Comenius's views as to the inner organisation of a school were original, and have proved themselves in all essential respects correct. The same may be said of his scheme for the organisation of a State-system—a scheme which is substantially, mutatis mutandis, at this moment embodied in the highly-developed system of Germany. When we consider, then, that Comenius first formally and fully developed educational method, that he introduced important reforms into the teaching of languages, that he introduced into schools the study of Nature, that he advocated with intelligence, and not on purely sentimental grounds, a milder discipline, we are justified in assigning to him a high, if not the highest, place among modern educational writers.”—S. S. Laurie, *John Amos Comenius*, pp. 217-226.

A. D. 1681-1878.—The Christian Brothers.—“Any description of popular education in Europe would be incomplete, which should not give prominence to the Institute of the Christian Brothers—or the Brothers of the Christian Doctrine—including in that term the earliest professional school for the training of teachers in

Europe; one of the most remarkable body of teachers devoted exclusively and without pay to the education of the children of the poor that the world has ever seen. . . . The Institute was established as a professional school in 1681, and to Abbe John Baptist de la Salle, belongs the high honor not only of founding it, but of so infusing into its early organization his own profound conviction of the Christ-like character of its mission among the poor, that it has retained for nearly two centuries the form and spirit of its origin. This devoted Christian teacher was born at Rheims on the 30th of April, 1651. . . . He was early distinguished for his scholarly attainments and maturity of character; and at the age of seventeen, before he had completed his full course of theological study, he was appointed Canon in the Cathedral church of Rheims. From the first, he became interested in the education of the young, and especially of the poor, as the most direct way of leading them to a Christian life;—and with this view before he was twenty-one years old, he assumed the direction of two charities, devoted to female education. From watching the operation of these schools, conducted by teachers without professional training, without plan and without mutual sympathy and aid, he conceived the design of bringing the teachers of this class of schools from the neighboring parishes into a community for their moral and professional improvement. For this purpose, he invited them first to meet, and then to lodge at his house, and afterwards, about the year 1681, he purchased a house for their special accommodation. Here, out of school hours and during their holidays, they spent their time in the practice of religious duties, and in mutual conferences on the work in which they were engaged. About this period, a large number of free schools for the poor were established in the neighboring towns; and applications were constantly made to the Abbe for teachers formed under his training, care, and influence. To meet this demand, and make himself more directly useful in the field of Christian education, he resigned his benefice, that he might give his whole attention to the work. To close the distance between himself, having a high social position and competence from his father's estate, and the poor schoolmasters to whom he was constantly preaching an unreserved consecration of themselves to their vocation—he not only resigned his canonry, with its social and pecuniary advantages, but distributed his patrimony, in a period of scarcity, in relieving the necessities of the poor, and in providing for the education of their children. He thus placed himself on a footing of equality—as to occupation, manner of life, and entire dependence on the charity of others—with the schoolmasters of the poor. The annals of education or religion show but few such examples of practical self-denial, and entire consecration to a sense of duty. . . . Having completed his act of resignation and self-imposed poverty, he assembled his teachers, announced to them what he had done, and sung with them a *Te Deum*. After a retreat—a period set apart to prayer and fasting—continued for seventeen days, they devoted themselves to the consideration of the best course to give unity, efficiency, and permanence to their plans of Christian education for the poor. They assumed the name of 'The Brothers of the Christian Doc-

trine,' as expressive of their vocation—which by usage came to be abbreviated into 'Christian Brothers.' They took on themselves vows of poverty, celibacy, and obedience for three years. They prescribed to themselves the most frugal fare, to be provided in turns by each other. They adopted at that time some rules of behavior, which have since been incorporated into the fundamental rules of the order. . . . In 1702 the first step was taken to establish an Institute at Rome, under the mission of one of the brothers, Gabriel Drolin, who after years of poverty, was made conductor of one of the charitable schools founded by Pope Clement XI. This school became afterwards the foundation of the house which the brothers have had in Rome since the pontificate of Benedict XIII., who conferred on the institute the constitution of a religious order. In 1703, under the pecuniary aid of M. Chateau Blanc, and the countenance of the archbishop, M. de Gontery, a school was opened at Avignon. . . . In 1789, the National Assembly prohibited vows to be made in communities; and in 1790, suppressed all religious societies; and in 1791, the institute was dispersed. At that date there were one hundred and twenty houses, and over one thousand brothers, actively engaged in the duties of the school room. The continuity of the society was secured by the houses established in Italy, to which many of the brothers fled. . . . In 1801, on the conclusion of a Concordat between the Pope and the government, the society was revived in France by the opening of a school at Lyons; and in 1815, they resumed their habit, and opened a novitiate, the members of which were exempt from military service. At the organization of the university in 1808, the institute was legally reorganized, and from that time has increased in numbers and usefulness. . . . In 1842, there were 390 houses (of which 326 were in France), with 3,030 brothers, and 585 novices. There were 642 schools with 163,700 children, besides evening schools with 7,800 adults in attendance, and three reformatory schools with 2,000 convicts under instruction."—Henry Barnard, *National Education in Europe*, pp. 435–441.—"In 1878 their numbers had increased to 11,640; they had 1,249 establishments, and the number of their scholars was 390,607."—Mrs. R. F. Wilson, *The Christian Brothers, their Origin and Work*, ch. 21.

A. D. 1762.—Rousseau.—"Rousseau, who had educated himself, and very badly at that, was impressed with the dangers of the education of his day. A mother having asked his advice, he took up the pen to write it; and, little by little, his counsels grew into a book, a large work, a pedagogic romance [*'Émile'*]. This romance, when it appeared in 1762, created a great noise and a great scandal. The Archbishop of Paris, Christophe de Beaumont, saw in it a dangerous, mischievous work, and gave himself the trouble of writing a long encyclical letter in order to point out the book to the reprobation of the faithful. This document of twenty-seven chapters is a formal refutation of the theories advanced in '*Émile*.' . . . In those days, such a condemnation was a serious matter; its consequences to an author might be terrible. Rousseau had barely time to flee. His arrest was decreed by the parliament of Paris, and his book was burned by the executioner. . . . As a fugitive, Rousseau did not find a safe retreat even in his own coun-

try. He was obliged to leave Geneva, where his book was also condemned, and Berne, where he had sought refuge, but whence he was driven by intolerance. He owed it to the protection of Lord Keith, governor of Neuchâtel, a principality belonging to the King of Prussia, that he lived for some time in peace in the little town of Motiers in the Val de Travers. . . . The renown of the book, condemned by so high an authority, was immense. Scandal, by attracting public attention to it, did it good service. What was most serious and most suggestive in it was not, perhaps, seized upon; but the 'craze' of which it was the object had, notwithstanding, good results. Mothers were won over, and resolved to nurse their own infants; great lords began to learn handicrafts, like Rousseau's imaginary pupil; physical exercises came into fashion; the spirit of innovation was forcing itself a way. . . . Three men above all the rest are noted for having popularized the pedagogic method of Rousseau, and for having been inspired in their labors by 'Émile.' These were Basedow, Pestalozzi, and Froebel. Basedow, a German theologian, had devoted himself entirely to dogmatic controversy, until the reading of 'Émile' had the effect of enlarging his mental horizon, and of revealing to him his true vocation. . . . Pestalozzi of Zürich, one of the foremost educators of modern times, also found his whole life transformed by the reading of 'Émile,' which awoke in him the genius of a reformer. . . . The most distinguished among his disciples and continuators is Froebel, the founder of those primary schools . . . known by the name of 'kindergartens,' and the author of highly esteemed pedagogic works. These various attempts, these new and ingenious processes which, step by step, have made their way among us, and are beginning to make their workings felt, even in institutions most stoutly opposed to progress, are all traceable to Rousseau's 'Émile.' . . . It is true that 'Émile' contains pages that have outlived their day, many odd precepts, many false ideas, many disputable and destructive theories; but at the same time we find in it so many sagacious observations, such upright counsels, suitable even to modern times, so lofty an ideal, that, in spite of everything, we cannot read and study it without profit. . . . There is absolutely nothing practicable in his [Rousseau's] system. It consists in isolating a child from the rest of the world; in creating expressly for him a tutor, who is a phoenix among his kind; in depriving him of father, mother, brothers, and sisters, his companions in study; in surrounding him with a perpetual charlatanism, under the pretext of following nature; and in showing him only through the veil of a factitious atmosphere the society in which he is to live. And, nevertheless, at each step it is sound reason by which we are met; by an astonishing paradox, this whimsicality is full of good sense; this dream overflows with realities; this improbable and chimerical romance contains the substance and the marrow of a rational and truly modern treatise on pedagogy. Sometimes we must read between the lines, add what experience has taught us since that day, transpose into an atmosphere of open democracy those pages, written under the old order of things, but even then quivering with the new world which they were bringing to light, and for which they prepared the way. Reading 'Émile' in the

light of modern prejudices, we can see in it more than the author wittingly put into it; but not more than logic and the instinct of genius set down there. To unfold the powers of children in due proportion to their age; not to transcend their ability; to arouse in them the sense of the observer and of the pioneer; to make them discoverers rather than imitators; to teach them accountability to themselves and not slavish dependence upon the words of others; to address ourselves more to the will than to custom, to the reason rather than to the memory; to substitute for verbal recitations lessons about things; to lead to theory by way of art; to assign to physical movements and exercises a prominent place, from the earliest hours of life up to perfect maturity; such are the principles scattered broadcast in this book, and forming a happy counterpoise to the oddities of which Rousseau was perhaps most proud."—J. Steeg, *Introduction to Rousseau's 'Émile.'*

A. D. 1798-1827.—Pestalozzi.—In Switzerland, up to the end of the eighteenth century, the state of primary instruction was very bad. "The teachers were gathered up at hazard; their pay was wretched; in general they had no lodgings of their own, and they were obliged to hire themselves out for domestic service among the well-off inhabitants of the villages, in order to find food and lodging among them. A mean spirit of caste still dominated instruction, and the poor remained sunk in ignorance. It was in the very midst of this wretched and unpropitious state of affairs that there appeared, towards the end of the eighteenth century, the most celebrated of modern educators. . . . Born at Zurich in 1746, Pestalozzi died at Brugg in Argovia in 1827. This unfortunate great man always felt the effects of the sentimental and unpractical education given him by his mother, who was left a widow with three children in 1751. He early formed the habit of feeling and of being touched with emotion, rather than of reasoning and of reflecting. The laughing-stock of his companions, who made sport of his awkwardness, the little scholar of Zurich accustomed himself to live alone and to become a dreamer. Later, towards 1760, the student of the academy distinguished himself by his political enthusiasm and his revolutionary daring. At that early period he had conceived a profound feeling for the miseries and the needs of the people, and he already proposed as the purpose of his life the healing of the diseases of society. At the same time there was developed in him an irresistible taste for a simple, frugal, and almost ascetic life. To restrain his desires had become the essential rule of his conduct, and, to put it in practice, he forced himself to sleep on a plank, and to subsist on bread and vegetables."—G. Compayré, *The Hist. of Pedagogy*, ch. 18.—"In spite . . . of Pestalozzi's patent disqualifications in many respects for the task he undertook; in spite of his ignorance of even common subjects (for he spoke, read, wrote, and cyphered badly, and knew next to nothing of classics or science); in spite of his want of worldly wisdom, of any comprehensive and exact knowledge of men and of things; in spite of his being merely an elementary teacher,—through the force of his all-conquering love, the nobility of his heart, the restless energy of his enthusiasm, his firm grasp of a few first principles, his eloquent exposition of them in words, his resolute manifestation of them in

deeds,—he stands forth among educational reformers as the man whose influence on education is wider, deeper, more penetrating, than that of all the rest—the prophet and the sovereign of the domain in which he lived and laboured. . . . It was late in life—he was fifty-two years of age—before Pestalozzi became a practical schoolmaster. He had even begun to despair of ever finding the career in which he might attempt to realize the theories over which his loving heart and teeming brain had been brooding from his earliest youth. . . . At fifty-two years of age, then, we find Pestalozzi utterly unacquainted with the science and the art of education, and very scantily furnished even with elementary knowledge, undertaking at Stanz, in the canton of Unterwalden, the charge of eighty children, whom the events of war had rendered homeless and destitute. . . . The house in which the eighty children were assembled to be boarded, lodged, and taught, was an old tumble-down Ursuline convent, scarcely habitable, and destitute of all the conveniences of life. The only apartment suitable for a schoolroom was about twenty-four feet square, furnished with a few desks and forms; and into this were crowded the wretched children, noisy, dirty, diseased, and ignorant, with the manners and habits of barbarians. Pestalozzi's only helper in the management of the institution was an old woman, who cooked the food and swept the rooms; so that he was, as he tells us himself, not only the teacher, but the paymaster, man-servant, and almost the housemaid of the children. . . . 'My wishes [he writes] were now accomplished. I felt convinced that my heart would change the condition of my children as speedily as the springtide sun reanimates the earth frozen by the winter. Nor,' he adds, 'was I mistaken. Before the springtide sun melted away the snow from our mountains, you could no longer recognise the same children.' . . . 'I was obliged,' he says, 'unceasingly to be everything to my children. I was alone with them from morning to night. It was from my hand they received whatever could be of service both to their bodies and minds. All succour, all consolation, all instruction came to them immediately from myself. Their hands were in my hand; my eyes were fixed on theirs, my tears mingled with theirs, my smiles encountered theirs, my soup was their soup, my drink was their drink. I had around me neither family, friends, nor servants; I had only them. I was with them when they were in health, by their side when they were ill. I slept in their midst. I was the last to go to bed, the first to rise in the morning. When we were in bed I used to pray with them and talk to them till they went to sleep. They wished me to do so.' . . . 'I knew,' he says, 'no system, no method, no art but that which rested on the simple consequences of the firm belief of the children in my love towards them. I wished to know no other.' . . . Gradually . . . Pestalozzi advanced to the main principles of his system of moral education. . . . He says:—'Nature develops all the human faculties by practice, and their growth depends on their exercise.' 'The circle of knowledge commences close around a man, and thence extends concentrically.' 'Force not the faculties of children into the remote paths of knowledge, until they have gained strength by exercise on things that are near them.' 'There is in Nature an order and march of de-

velopment. If you disturb or interfere with it, you mar the peace and harmony of the mind. And this you do, if, before you have formed the mind by the progressive knowledge of the realities of life, you fling it into the labyrinth of words, and make them the basis of development.' 'The artificial march of the ordinary school, anticipating the order of Nature, which proceeds without anxiety and without haste, inverts this order by placing words first, and thus secures a deceitful appearance of success at the expense of natural and safe development.' In these few sentences we recognise all that is most characteristic in the educational principles of Pestalozzi. . . . To set the intellectual machinery in motion—to make it work, and keep it working; that was the sole object at which he aimed; of all the rest he took little account. . . . He relied upon a principle which must be insisted on as cardinal and essential in education. He secured the thorough interest of his pupils in the lesson, and mainly through their own direct share in it. . . . Observation, . . . according to Pestalozzi (and Bacon had said the same thing before him), is the absolute basis of all knowledge, and is therefore the prime agent in elementary education. It is around this theory, as a centre of gravity, that Pestalozzi's system revolves."—J. Payne, *Lect's on the Hist. of Education*, lect. 9. —"During the short period, not more than a year, which Pestalozzi spent among the children at Stanz, he settled the main features of the Pestalozzian system. Sickness broke out among the children, and the wear and tear was too great even for Pestalozzi. He would probably have sunk under his efforts if the French, pressed by the Austrians, had not entered Stanz, in January, 1799, and taken part of the Ursuline Convent for a military hospital. Pestalozzi was, therefore, obliged to break up the school, and he himself went to a medicinal spring on the Gurnigel in the Canton Bern. . . . He came down from the Gurnigel, and began to teach in the primary schools (i. e., schools for children from four to eight years old) of Burgdorf, the second town in the Canton. Here the director was jealous of him, and he met with much opposition. . . . In less than a year Pestalozzi left this school in bad health, and joined Krüsi in opening a new school in Burgdorf Castle, for which he afterward (1802) obtained Government aid. Here he was assisted in carrying out his system by Krüsi, Tobler, and Bluss. He now embodied the results of his experience in a work which has obtained great celebrity—'How Gertrude Teaches her Children' [also published in England under the title of 'Leonard and Gertrude']. In 1802 Pestalozzi, for once in his life a successful and popular man, was elected a member of a deputation sent by the Swiss people to Paris. On the restoration of the Cantons in 1804, the Castle of Burgdorf was again occupied by one of the chief magistrates, and Pestalozzi and his establishment were moved to the Monastery of Buchsee. Here the teachers gave the principal direction to another, the since celebrated Fellenburg, 'not without my consent,' says Pestalozzi, 'but to my profound mortification.' He therefore soon accepted an invitation from the inhabitants of Yverdon to open an institution there, and within a twelvemonth he was followed by his old assistants, who had found government by Fellenburg less to their taste than no-government by Pesta-

lozzi. The Yverdun Institute had soon a world-wide reputation. Pestalozzian teachers went from it to Madrid, to Naples, to St. Petersburg. Kings and philosophers joined in doing it honor. But, as Pestalozzi himself has testified, these praises were but as a laurel-wreath encircling a skull. The life of the Pestalozzian institutions had been the love which the old man had infused into all the members, teachers as well as children; but this life was wanting at Yverdun. The establishment was much too large to be carried on successfully without more method and discipline than Pestalozzi, remarkable, as he himself says, for his 'unrivalled incapacity to govern,' was master of. The assistants began each to take his own line, and even the outward show of unity was soon at an end. . . . Thus the sun went down in clouds, and the old man, when he died at the age of eighty, in 1827, had seen the apparent failure of all his toils. He had not, however, failed in reality. It has been said of him that his true fortune was to educate ideas, not children, and when twenty years later the centenary of his birth was celebrated by school-masters, not only in his native country, but throughout Germany, it was found that Pestalozzian ideas had been sown, and were bearing fruit, over the greater part of central Europe."—R. H. Quick, *Essays on Educational Reformers*, ch. 8.

A. D. 1804-1891.—Co-education and the Higher Education of Women in the United States.—"When to a few daring minds the conviction came that education was a right of personality rather than of sex, and when there was added to this growing sentiment the pressing demand for educated women as teachers and as leaders in philanthropy, the simplest means of equipping women with the needful preparation was found in the existing schools and colleges. . . . In nearly every State west of the Alleghanies, 'Universities' had been founded by the voluntary tax of the whole population. Connected with all the more powerful religious denominations were schools and colleges which called upon their adherents for gifts and students. These democratic institutions had the vigor of youth, and were ambitious and struggling. 'Why,' asked the practical men of affairs who controlled them, 'should not our daughters go on with our sons from the public schools to the university which we are sacrificing to equip and maintain?' It is not strange that with this and much more practical reasoning of a similar kind, co-education was established in some colleges at their beginning, in others after debate, and by a radical change in policy. When once the chivalrous desire was aroused to give girls as good an education as their brothers, Western men carried out the principle unflinchingly. From the kindergarten to the preparation for the doctorate of philosophy, educational opportunities are now practically alike for men and women. The total number of colleges of arts and sciences empowered by law to give degrees, reporting to Washington in 1888, was three hundred and eighty-nine. Of these, two hundred and thirty-seven, or nearly two-thirds, were co-educational. Among them are nearly all the State universities, and nearly all the colleges under the patronage of the Protestant sects. Hitherto I have spoken as if co-education were a Western movement; and in the West it certainly has had greater currency

than elsewhere. But it originated, at least so far as concerns superior secondary training, in Massachusetts. Bradford Academy, chartered in 1804, is the oldest incorporated institution in the country to which boys and girls were from the first admitted; but it closed its department for boys in 1836, three years after the foundation of co-educational Oberlin, and in the very year when Mount Holyoke was opened by Mary Lyon, in the large hope of doing for young women what Harvard had been founded to do for young men just two hundred years before. Ipswich and Abbot Academies in Massachusetts had already been chartered to educate girls alone. It has been the dominant sentiment in the East that boys and girls should be educated separately. The older, more generously endowed, more conservative seats of learning, inheriting the complications of the dormitory system, have remained closed to women. . . . In the short period of the twenty years after the war the four women's colleges which are the richest in endowments and students of any in the world were founded and set in motion. These colleges—Vassar, opened in 1865, Wellesley and Smith in 1875, and Bryn Mawr in 1885—have received in gifts of every kind about \$6,000,000, and are educating nearly two thousand students. For the whole country the Commissioner of Education reports two hundred and seven institutions for the superior instruction of women, with more than twenty-five thousand students. But these resources proved inadequate. There came an increasing demand, especially from teachers, for education of all sorts. . . . In an attempt to meet a demand of this sort the Harvard Annex began twelve years ago [in 1879] to provide a few women with instruction from members of the Harvard faculty. . . . Barnard College in New York is an annex of Columbia only in a sense, for not all her instruction is given by Columbia's teaching force, though Columbia will confer degrees upon her graduates. The new woman's college at Cleveland sustains temporarily the same relations to Adelbert College, though to a still greater extent she provides independent instruction."—A. F. Palmer, *Review of the Higher Education of Women* (*Woman and the Higher Education*, pp. 105-127).—"The Cleveland College for Women, Cleveland, Ohio, was first opened for instruction in 1888 as a department of Western Reserve University. At the same time the trustees of the university decided to receive no more women into Adelbert College. That the success of the new school might be assured, the faculty of Adelbert College generously offered their services for a term of years as instructors. During the first year twenty-three young women were admitted, but two of whom were in the regular courses. During 1889-90 the number of students increased to thirty-eight. . . . In 1887 Evelyn College, an institution for women, was opened at Princeton, N. J. Its location at this place gives the institution very great advantages, inasmuch as the use of the libraries and museums of the College of New Jersey, popularly known as Princeton College, are granted to the students."—U. S. Comm'r of Education, *Report*, 1889-90, v. 2, p. 744.—"The latest report of the United States Commissioner of Education contains over two hundred institutions for the superior education of women. The list includes colleges and seminaries entitled to confer degrees, and a few

seminaries, whose work is of equal merit, which do not give degrees. Of these more than two hundred institutions for the education of women exclusively, only 47 are situated within [western states]. . . . Of these 47, but 30 are chartered with authority to confer degrees. . . . The extent to which the higher education of women is in the West identified with co-education, can be seen by comparing the two statements above given. Of the total 212 higher institutions receiving women, and of the total 195 such institutions which confer the regular degrees in arts, science, and letters, upon their graduates, 165 are co-educational. . . . Among colleges characterized from birth by a liberal and progressive spirit may be mentioned 'The Cincinnati Wesleyan Woman's College.' This institution was chartered in 1842, and claims to be 'the first liberal collegiate institution in the world for the exclusive education of women.' . . . The West is committed to co-education, excepting only the Roman Catholic, the Lutheran, and the Protestant Episcopal sects,—which are not yet, as sects, committed to the collegiate education of women at all,—and the Presbyterian sect, whose support, in the West, of 14 co-educational colleges against 4 for the separate education of young men, almost commits it to the co-educational idea. . . . In 1853, Antioch College was opened at Yellow Springs, O. It was the first endeavor in the West to found a college under Christian but non-sectarian auspices. Its president, Horace Mann, wrote of it: 'Antioch is now the only first-class college in all the West that is really an unsectarian institution.' . . . Antioch was from the first avowedly co-educational."—M. W. Sewall, *Education of Women in the Western States (Woman's Work in Am., pp. 61-70)*.—"Most people would probably be ready to say that except for the newly founded Woman's College in Baltimore and Tulane University [State university of Louisiana], the collegiate education of women does not exist in the South. But as matter of fact, there are no less than one hundred and fifty institutions in the South which are authorized by the Legislatures of their respective States to confer the regular college degrees upon women. Of these, forty-one are co-educational, eighty-eight are for women alone, and twenty-one are for colored persons of both sexes. The bureau of education makes no attempt to go behind the verdict of the State Legislatures, but on looking over the catalogues of all these institutions it is, as might have been expected, easy to see that the great majority of them are not in any degree colleges, in the ordinary sense of the word. Not a single one of the so-called female colleges presents a real college course, and many of the co-educational colleges are colleges only in name."—C. L. Franklin, *Education of Women in the Southern States (Woman's Work in Am., pp. 93-94)*.

A. D. 1816-1892.—Fröbel and the Kindergarten.—"Fröbel (Friedrich Wilhelm August) was born April 21, 1782, at Oberweissbach, in the principality of Schwarzburg-Rudolstadt. His mother died when he was so young that he never even remembered her; and he was left to the care of an ignorant maid-of-all-work, who simply provided for his bodily wants. . . . Not until he was ten years of age did he receive the slightest regular instruction. He was then sent to school, to an uncle who lived in the neighbor-

hood. . . . He pronounced the boy to be idle (which, from his point of view, was quite true) and lazy (which certainly was not true)—a boy, in short, that you could do nothing with. . . . It was necessary for him to earn his bread, and we next find him a sort of apprentice to a woodsman in the great Thuringian forest. Here, as he afterward tells us, he lived some years in cordial intercourse with nature and mathematics, learning even then, though unconsciously, from the teaching he received, how to teach others. . . . In 1801 he went to the University of Jena, where he attended lectures on natural history, physics, and mathematics; but, as he tells us, gained little from them. . . . This . . . was put an end to by the failure of means to stay at the University. For the next few years he tried various occupations. . . . While engaged in an architect's office at Frankfort, he formed an acquaintance with the Rector of the Model School, a man named Gruner. Gruner saw the capabilities of Fröbel, and detected also his entire want of interest in the work that he was doing; and one day suddenly said to him: 'Give up your architect's business; you will do nothing at it. Be a teacher. We want one now in the school; you shall have the place.' This was the turning point in Fröbel's life. He accepted the engagement, began work at once, and tells us that the first time he found himself in the midst of a class of 30 or 40 boys, he felt that he was in the element that he had missed so long—"the fish was in the water." He was inexpressibly happy. . . . In a calmer mood he severely questioned himself as to the means by which he was to satisfy the demands of his new position. About this time he met with some of Pestalozzi's writings, which so deeply impressed him that he determined to go to Yverdon and study Pestalozzi on the spot. He accomplished his purpose, and lived and worked for two years with Pestalozzi. His experience at Yverdon impressed him with the conviction that the science of education had still to draw out from Pestalozzi's system those fundamental principles which Pestalozzi himself did not comprehend. 'And therefore,' says Schmidt, 'this genial disciple of Pestalozzi supplemented his system by advancing from the point which Pestalozzi had reached through pressure from without, to the innermost conception of man, and arriving at the thought of the true development and culture of mankind.' . . . His educational career commenced November 13th, 1816, in Greisheim, a little village near Stadt-Ilm, in Thuringia; but in 1817, when his Pestalozzian friend, Middendorf, joined him . . . the school was transferred to the beautiful village of Keilhau, near Rudolstadt, which may be considered as his chief starting-place. . . . Langenthal, another Pestalozzian, associated himself with them, and they commenced building a house. The number of pupils rose to twelve in 1818. Then the daughter of war-counselor Hoffman of Berlin, from enthusiasm for Fröbel's educational ideas, became his wife. She had a considerable dowry, which, together with the accession of Fröbel's elder brother, increased the funds and welfare of the school. In 1831 he was invited by the composer, Schnyder von Wartensee, to erect a similar garden on his estate, near the lake of Sempach, in the canton Luzern. It was done. Fröbel changed his residence the next year, from Keilhau to Switzerland. In 1834 the government

of Bern invited him to arrange a training course for teachers in Burgdorf. In 1835 he became principal of the orphan asylum in Burgdorf, but in 1836 he and his wife wished to return to Germany. There he was active in Berlin, Keilhau, Blankenburg, Dresden, Liebenstein in Thuringia, Hamburg, (1849,) and Marienthal, near Liebenstein, where he lived until his decease in 1852, among the young ladies, whom he trained as nurses for the kindergarten, and the little children who attended his school."—H. Barnard, *ed. Papers on Froebel's Kindergarten: Memoir*.—"The child thinks only through symbols. In other words, it explains all it sees not by the recorded experience of others, as does an adult, but by marshaling and comparing its own concept or symbol of what it has itself seen. Its sole activity is play. 'The school begins with teaching the conventionalities of intelligence. Froebel would have the younger children receive a symbolic education in plays, games, and occupations which symbolize the primitive arts of man.' For this purpose, the child is led through a series of primitive occupations in plaiting, weaving, and modeling, through games and dances, which bring into play all the social relations, and through songs and the simple use of number, form and language. The 'gifts' all play their manifold purpose, inspiring the child, awakening its interest, leading the individual along the path the race has trod, and teaching social self-control. The system has its palpable dangers. The better and more intricate the tool, the more skill needed in its safe use. . . . The kindergarten requires trained hands. With trivial teachers its methods may easily degenerate into mere amusement, and thwart all tendency to attention, application, or industry. Valuable as it is in its hints for the care and development of children, its gay round needs to be ballasted with the purpose and theory uppermost in Froebel's mind when he opened his first school in a German peasant village, down whose main street a brook tumbled, and through whose lanes the halberdier still walked by night and sang the hours. It is idle to suppose that Froebel founded a perfect system, or to insist on all the details of the professional kindergarten's creed. Here as elsewhere, and aforesaid, it has taken only forty years from the founder's death for faith to degenerate into religion and sect. But the central purpose he had in view must be steadily maintained. He sought his ends through play, and not through work. It is as dangerous for this method to harden into an approach to the primary school as it is for it to soften into a riot of misrule, and lax observance of order. . . . Switzerland, then the only republic in Europe, was the first country to adopt Froebel's method, though in some Swiss towns the kindergarten is still supported by private associations. France, another republic, has more children beginning school under an adaptation of Froebel than all the rest of the world put together. It was Froebel's own opinion that 'the spirit of American nationality was the only one in the world with which his method was in complete harmony, and to which its legitimate institutions would present no barriers.' The figures given below of the growth of the kindergarten in this country are the best possible proof of the truth of Froebel's prescient assertion. . . . In 1870 there were in this country only five kindergarten schools, and

in 1872 the National Education Association at its Boston meeting appointed a committee which reported a year later recommending the system. Between 1870 and 1873, experimental kindergartens were established in Boston, Cleveland, and St. Louis, public attention was enlisted by the efforts of Miss Elizabeth Palmer Peabody, the most important worker in the early history of the kindergarten in this country, and the system began a rapid growth. Taking private and public kindergartens together, the advance of the system has displayed this most rapid progress:

	1873	1880	1885	1891-2
Schools.	95	232	413	1,001
Teachers.	216	524	902	2,242
Pupils.	2,809	8,871	18,780	50,423

Down to 1880, these figures, outside of St. Louis, relate almost altogether to private schools. By 1885 the public kindergartens were not over a fifth in number of the schools, and held not over a fourth of the pupils. In the figures last given in this table there are 724 private kindergartens with 1,517 teachers and 29,357 pupils, and 277 public kindergartens with 725 teachers and 21,066 pupils, so that the latter have now 27 per cent. of the schools, 33 per cent. of the teachers, and 42 per cent. of the pupils. . . . Yet great as is this advance, the kindergarten as yet plays but an infinitesimal part in our educational system as a whole. . . . Of the sixteen American cities with a population of over 200,000 in 1890, only four—Philadelphia, Boston, Milwaukee, and St. Louis—have incorporated the kindergarten on any large scale in their public-school systems. Four more—New York, Chicago, Brooklyn, and Buffalo—have kindergarten associations organized to introduce the new method as a part of free public education."—T. Williams, *The Kindergarten Movement (The Century, Jan., 1893)*.

A. D. 1865-1883.—The Higher Education of Women in England.—The movement in England to secure a higher education for women dates from 1865. "In that year a Royal Commission was appointed to inquire into and report on the endowed grammar schools of England and Wales, and on what is called 'secondary' education generally. Several ladies who were already alive to the deficiencies in the education of their own sex, memorialized this Commission to extend the scope of its inquiry to girls' schools, and the Commission taking what was then thought quite a bold step, consented to do so. . . . One of the points brought out was the absence of any institutions doing for women what the universities did for men, and the consequent difficulty in which women stood of obtaining the highest kind of education—a difficulty which told on girls' schools by making it hard for them to procure thoroughly competent mistresses. This led in the course of the next year or two—the report of the Commission having been published in 1868—to the establishment of a college for women, which was first placed at Hitchin, a town on the Great Northern Railway, between London and Cambridge, and in a little while, when money had been collected sufficient for the erection of buildings, this college was finally settled at Girton, a spot about two miles from Cambridge, whence it takes the name of Girton College. Its purpose was to provide for women the same teaching in the same subjects as men receive in Cambridge University, and the teachers were nearly

all of them professors or tutors there, men in some cases of high eminence. Meanwhile, in Cambridge itself, a system of day classes for women, taught by University teachers, had been created, at first as an experiment for one year only. When several years had passed, when the number attending had increased, and it was found that women came to lodge in Cambridge in order to profit by these lectures, a house was hired in which to receive them, and ultimately a company was formed and a building erected a little way out of Cambridge, under the name of Newnham Hall, to which the lectures, now mainly designed for these students coming from a distance, were attached. Thus, at about the same time, though from somewhat different origins, Girton and Newnham came into being and began their course of friendly rivalry. Both have greatly developed since then. Their buildings have been repeatedly enlarged. Their numbers have risen steadily. . . . In Girton the charge for lodging, board and instruction is £100 per annum, in Newnham a little less. The life in both is very similar, a lady being placed at the head as resident principal, while the affairs are managed by a committee including both men and women. The lectures are delivered partly by Cambridge men, professors in the University, or tutors or lecturers in some of the colleges, partly by ladies, who, having once been students themselves, have come back as teachers. These lectures cover all the subjects required in the degree examinations of the University; and although students are not obliged to enter themselves for those examinations, they are encouraged to do so, and do mostly set the examinations before them as their goal. Originally the University took no official notice of the women students, and their being examined by the regular degree examiners of the University was a matter of pure favor on the part of those gentlemen. . . . At last, however, some examiners came into office (for the examiners are changed every two years) who disapproved of this informal examination of the women candidates, and accordingly a proposal was made to the University that it should formally authorize and impose on the examiners the function heretofore discharged by them in their individual capacity. This proposal, after some discussion and opposition, was carried, so that now women may enter both for the honor examinations and the pass examinations for the University degree as a matter of right. Their names do not appear in the official lists among those of the men, but separately; they are, however, tested by the same question papers and judged by the same standard. . . . Some Oxford graduates and their friends, stimulated by the success of Girton and Newnham, have founded two similar institutions in Oxford, one of which, Episcopalian and indeed High Church in its proclivities, is called Lady Margaret Hall, while the other, in compliment to the late Mrs. Somerville, has been given the title of Somerville Hall. These establishments are conducted on much the same lines as the two Cambridge colleges. . . . In the large towns where new colleges have been lately founded or courses of lectures established, such as Manchester, Liverpool, and Leeds, steps are usually taken to provide lectures for women. . . . What is called among you the question of co-education has come up very little in England. All the

lectures given inside the walls of the four English colleges I have mentioned are, of course, given to women only, the colleges being just as exclusively places for women as Trinity and St. John's are places for men. . . . At this moment the principal of one of the two halls of which Newnham consists is a daughter of the Prime Minister [Miss Helen Gladstone], while her predecessor was a niece of the Marquis of Salisbury. The principal of Girton is a niece of the late Lord Lawrence, the famous Governor-General of India. Of the students a fair proportion belong to the wealthy classes, while a somewhat larger proportion mean to take teaching as their profession."—*Progress of Female Education in Eng. (Nation, July 5, 1883)*.—See, also, above, SCOTLAND.

A. D. 1865-1893.—Industrial Education in the United States.—"In 1865 John Boynton of Templeton, Mass., gave \$100,000 for the endowment and perpetual support of a Free Institute for the youth of Worcester County, Mass. He thus explained his objects: 'The aim of this school shall ever be the instruction of youth in those branches of education not usually taught in the public schools, which are essential and best adapted to train the young for practical life'; especially such as were intending to be mechanics, or manufacturers, or farmers. In furtherance of this object, ten months later, in 1866, Ichabod Washburn of Worcester gave \$25,000, and later \$50,000 more to erect, equip, and endow a machine-shop which should accommodate twenty apprentices and a suitable number of skilled workmen to instruct them and to carry on the shop as a commercial establishment. The apprentices were to be taught the use of tools in working wood and metals, and to be otherwise instructed, much as was customary fifty years ago for boys learning a trade. The Worcester Free Institute was opened for students in November, 1868, as a technical school of about college grade; and the use of the shops and shop instruction was limited to those students in the course of mechanical engineering. Thus did the Worcester School under the leadership of Prest. C. O. Thompson incorporate tool-instruction and shop-practice into the training of mechanical engineers. . . . In the same year, 1868, Victor Della-Vos introduced into the Imperial Technical (engineering) School at Moscow the Russian method of class-instruction in the use of tools. . . . The great value of the work of Della-Vos lay in the discovery of the true method of tool-instruction, for without his discovery the later steps would have been impossible. In 1870, under the direction of Prof. Robinson and Prest. J. M. Gregory of the University of Illinois, a wood-working shop was added to the appliances for the course in architecture, and an iron-working shop to the course in mechanical engineering in that institution. In 1871, the Stevens Institute of Hoboken, N. J., munificently endowed by Edwin A. Stevens, as a school of mechanical engineering, fitted up a series of shops for the use of its students. The next step forward was taken by Washington University in St. Louis in providing for all its engineering students systematic instruction in both wood and metals. In 1872, a large shop in the Polytechnic School was equipped with work-benches, two lathes, a forge, a gear-cutter and full sets of carpenters', machinists', and forging tools. . . . Thus far had we progressed when the Philadelphia Exposition

of 1876 was opened. None of us knew anything of the Moscow school, or of the one in Bohemia in which the Russian method had been adopted in 1874. . . . In his report of 1876, Prest. J. D. Runkle, of the Mass. Institute of Technology, gave a full exposition of the theory and practice of tool-instruction of Della-Vos as exhibited at the Philadelphia Exposition, and he recommended that without delay the course in mechanical engineering at the Institute be completed by the addition of a series of Instruction Shops. The suggestion was acted on, and in the spring of 1877 a class of mechanical engineering students was given instruction in chipping and filing. . . . The St. Louis Manual Training School was established June 6, 1879. It embodied hopes long cherished and plans long formed. For the first time in America the age of admission to school-shops was reduced to fourteen years as a minimum, and a very general three-years' course of study was organized. The ordinance by which the school was established specified its objects in very general terms:—'Its objects shall be instruction in mathematics, drawing, and the English branches of a high-school course, and instruction and practice in the use of tools. The tool-instruction, as at present contemplated, shall include carpentry, wood-turning, pattern-making, iron clipping and filing, forge-work, brazing and soldering, the use of machine-shop tools, and such other instruction of a similar character, as it may be deemed advisable to add to the foregoing from time to time. The students will divide their working hours, as nearly as possible, equally between mental and manual exercises.' . . . The Baltimore Manual Training School, a public school, on the same footing as the high school, was opened in 1883. The Chicago Manual Training School, established as an incorporated school by the Commercial Club of that city, was opened in January, 1884. . . . Manual training was introduced into the high school of Eau Claire, Wisconsin, in 1884. The 'Scott Manual Training School' was organized as a part of the high school of Toledo in 1884. . . . Manual training was introduced into the College (high school) of the City of New York in 1884. The Philadelphia Manual Training School, a public high school, was opened in September, 1885. The Omaha high school introduced manual training in 1885. . . . Dr. Adler's Workingman's School for poor children has for several years taught manual training to the very lowest grades. . . . The Cleveland Manual Training School was incorporated in 1885, and opened in connection with the city high school, in 1886. New Haven, which had for some time encouraged the use of tools by the pupils of several of its grammar schools, in September, 1886, opened a regular shop and furnished systematic instruction in tool-work. The school board of Chicago added manual training to the course of the 'West Side High School' in September, 1886."—C. M. Woodward, *The Manual Training School*, ch. 1.—"Concerning the manual-training school there are two widely different views. The one insists that it shall teach no trade, but the rudiments of all of them; the other that the particular industries may properly be held to maintain schools to recruit their own ranks. The first would teach the use of the axe, the saw, the plane, the hammer, the square, the chisel, and the file; claiming that 'the graduate from such a course at the end of

three years is within from one to three months of knowing quite as thoroughly as an apprentice who had served seven years any one of the twenty trades to which he may choose to turn.' Of this class are, besides most of those already named, the Haish Manual Training School of Denver; that of Tulane University, New Orleans; the Felix Adler's Workingman's School, of New York City; and the School of Manual Technology, Vanderbilt University, Nashville. Among schools of the second class are some interesting institutions. They include the numerous general and special trade-schools for boys, instruction in the manifold phases of domestic economy for girls, and the yet small but rapidly growing class of industries open alike to both. Sewing is taught in public or private schools in Baltimore, Boston, Cincinnati, Chicago, New York, Philadelphia, Providence, St. Louis, and about a dozen other cities, besides in a number of special institutions. Cooking-schools are no longer a novelty in half as many of the larger cities, since their introduction into New York city in 1876. Printing may be learned in the Kansas Agricultural College; Cooper Union, New York; Girard College, Philadelphia, and elsewhere. Telegraphy, stenography, wood-engraving, various kinds of smithing, and carpentry, have, especially the last two, numerous representatives. The New York Kitchen Garden, for the instruction of children in the work of the household, is an interesting modification of the Kindergarten along the industrial line. For young ladies, the Elizabeth Aull Seminary, Lexington, Missouri, is a school of home-work, in which 'are practically taught the mysteries of the kitchen and laundry,' and upon whose graduates is conferred the degree of 'Mistress of Home-Work.' The Lasell Seminary at Auburndale, Massachusetts, also has recently (1885) undertaken a similar but more comprehensive experiment, including lessons and lectures in anatomy and physiology, with hygiene and sanitation, the principles of common law by an eminent attorney, instruction and practice in the arts of domestic life, the principles of dress, artistic house-furnishing, healthy homes, and cooking. Of training-schools for nurses there are thirty-one. . . . Of schools of a different character still, there have been or are the Carriage Builder's Apprenticeship School, New York; those of Hoe & Co., printing-press manufacturers; and Tiffany & Co., jewelers; and the Tailors' 'Trades School' recently established and flourishing in Baltimore, besides the Pennsylvania Railroad novitiate system, at Altoona; in which particular trades or guilds or corporations have sought to provide themselves with a distinct and specially trained class of artisans. The latest and in some respects the most interesting experiment of the kind is that of the 'Baltimore and Ohio Railroad service' at Mt. Clare, Baltimore. It was inaugurated in 1885, apprentices being selected from applicants by competitive examination."—R. G. Boone, *Education in the United States*, ch. 13.

A. D. 1873-1889.—University Extension in England.—"The University Extension Movement, which has now been before the country eighteen years, has revealed the existence of a real need for larger opportunities of higher education amongst the middle and working classes. From the time of its inauguration in 1873 by the University of Cambridge, owing mainly to the

enthusiastic advocacy and skill in practical affairs of Mr. James Stuart (at that time Fellow and Lecturer of Trinity College), down to the present day, when the principle has been accepted by all the Universities in Great Britain and by some in countries beyond the seas, the movement has shown marvellous vitality and power of adjustment to changing conditions. From a small beginning in three towns in the Midlands, it has grown until the centres in connection with the various branches are to be numbered by hundreds and the students by tens of thousands. The success attained by Cambridge in the first three years led, in 1876, to the formation of the London Society for the Extension of University Teaching, for the express purpose of carrying on similar work within the metropolitan area. In 1878 the University of Oxford undertook to make similar arrangements for Lectures, but after a year or two, they were for the time abandoned. Subsequently in 1885 the Oxford work was revived and has since been carried on with vigour and success. The University of Durham is associated with Cambridge in this work in the north-east of England, while courses of Lectures on the Extension plan have been given for several years in connection with Victoria University in centres around Manchester. Two or three years ago the four Scottish Universities united in forming a like scheme for Scotland, while at the close of 1889 a Society for the Extension of University Teaching was formed in the north of Ireland. Finally the movement has spread to Greater Britain and the United States, and there are signs that work on similar lines is about to be established in various countries on the continent of Europe."—R. D. Roberts, *Eighteen years of University Extension*, ch. 1.—"One of the chief characteristics of the system is the method of teaching adopted in connection with it. A working man at one of the centres in the north of England who had attended the lectures for several terms, described the method as follows in a paper read by him at a meeting:—"Any town or village which is prepared to provide an audience, and pay the necessary fees, can secure a course of twelve lectures on any subject taught in the University, by a lecturer who has been educated at the University, and who is specially fitted for lecturing work. A syllabus of the course is printed and put into the hands of students. This syllabus is a great help to persons not accustomed to note-taking. Questions are given on each lecture, and written answers can be sent in by any one, irrespective of age or sex. All the lectures, except the first, are preceded by a class, which lasts about an hour. In this class the students and the lecturer talk over the previous lecture. The written answers are returned with such corrections as the lecturer deems necessary. At the end of the course an examination is held and certificates are awarded to the successful candidates. These lectures are called University Extension Lectures.' Another definition which has been given is this:—"Advanced systematic teaching for the people, without distinction of rank, sex, or age, given by means of lectures, classes, and written papers during a connected course, conducted by men "who believe in their work, and intend to do it," teachers who connect the country with the University by manner, method, and information."—R. D. Roberts, *The University Extension Scheme*, pp. 6-7.

A. D. 1887-1892.—University Extension in the United States.—"The first conscious attempts to introduce English University Extension methods into this country were made in 1887, by individuals connected with the Johns Hopkins University. The subject was first publicly presented to the American Library Association at their meeting upon one of the Thousand Islands in September, 1887. The idea was heartily approved," and the first result of the suggestion was a course of lectures on economic questions given in one of the lecture-rooms of the Buffalo Library the following winter by Dr. Edward W. Bemis. The next winter "Dr. Bemis repeated his course on 'Economic Questions of the Day' in Canton, Ohio. . . . The Canton experiment was followed in February, 1889, by another course, conducted by Dr. Bemis, in connection with the Public Library at St. Louis. . . . About the time when these various experiments were being tried in St. Louis, Canton, and Buffalo, individual members of Johns Hopkins University were attempting to introduce University Extension methods in connection with local lectures in the city of Baltimore. . . . The idea of University Extension in connection with Chautauqua was conceived by Dr. J. H. Vincent during a visit to England, in 1886, when he saw the English lecture system in practical operation and his own methods of encouraging home reading in growing favor with university men. The first definite American plan, showing at once the aims, methods, cost, and history, of University Extension lectures, was drawn up at Chautauqua by the writer of this article in the early summer of 1888. . . . Contemporary with the development of Chautauqua College and University Extension was the plan of Mr. Seth T. Stewart, of Brooklyn, New York, for 'University and School Extension.' . . . Several public meetings were held in New York in 1889-90 for the promotion of University and School Extension. . . . One of the most gratifying recent experiments in University Extension in America has been in the city of Philadelphia under the auspices of the American Society for the Extension of University Teaching. At various local centres Mr. Richard G. Moulton, one of the most experienced lecturers from Cambridge, England, lectured for ten weeks in the winter and spring of 1891 to large and enthusiastic audiences. All the essential features of English University Extension were methodically and persistently carried out. . . . The American field for University Extension is too vast for the missionary labors of any one society or organization. . . . The most significant sign of the times with regard to University Extension in America is the recent appropriation of the sum of \$10,000 for this very object by the New York legislature. The money is to be expended under the direction of the Regents of the University of the State of New York. . . . The intention of the New York act is simply to provide the necessary means for organizing a State system of University Extension . . . and to render such general assistance and co-operation as localities may require."—H. B. Adams, *University Extension in America* (Forum, July, 1891).—On the opening, in 1892, of the Chicago University, munificently endowed by Mr. John D. Rockefeller, of Cleveland, University Extension was made one of the three grand divisions of its organization.

EDWARD.

EDWARD, King of Portugal, A. D. 1433-1438. . . . **Edward**, called the Confessor, King of England, A. D. 1042-1065. . . . **Edward**, called the Elder, King of Wessex, A. EGYPT.

Its Names.—"Egypt is designated in the old inscriptions, as well as in the books of the later Christian Egyptians, by a word which signifies 'the black land,' and which is read in the Egyptian language Kem, or Kami.* The ancients had early remarked that the cultivable land of Egypt was distinguished by its dark and almost black colour. . . . The neighbouring region of the Arabian desert bore the name of Teshar, or the red land. . . . The Egyptians designated themselves simply as 'the people of the black land,' and . . . the inscriptions, so far as we know, have handed down to us no other appellation. . . . A real enigma is proposed to us in the derivation and meaning of the curious proper name by which the foreign peoples of Asia, each in its own dialect, were accustomed to designate Egypt. The Hebrews gave the land the name of Mizraim; the Assyrians Muzur; the Persians, Mudraya. We may feel assured that at the basis of all these designations there lies an original form which consisted of the three letters M-z-r, all explanations of which have been as yet unsuccessful. Although I intend hereafter to consider more particularly the derivation of this puzzling name, which is still preserved at the present day in the Arabic appellation Misr, I will here premise the remark that this name was originally applied only to a certain definite part of Egypt, in the east of the Delta, which, according to the monuments, was covered and defended by many 'zor,' or fortresses, and was hence called in Egyptian Mazor (that is, fortified)."—H. Brugsch Bey, *Hist. of Egypt under the Pharaohs*, ch. 2.—"Brugsch explains the name Egypt by 'ha-ka-ptah,' i. e. 'the precinct of Ptah.' As Ptah was more especially the god of Memphis, this name would have come from Memphis."—M. Duncker, *Hist. of Antiquity*, bk. 1, ch. 1, note.—"The last use of Kem died out in the form Chemi in Coptic, the descendant of the classical language, which ceased to be spoken a century ago. It survives among us in the terms 'chemistry' and 'alchemy,' sciences thought to be of Egyptian origin."—R. S. Poole, *Cities of Egypt*, int.

Its Historical Antiquity.—The lists of Egyptian kings which have been found agree in pre-

senting the name of Mena or Menes as that of the first Pharaoh of Egypt, and as such he is unhesitatingly accepted, although no contemporary monumental record of the fact has yet been discovered. "As to the era . . . when the first Pharaoh mounted the throne, the German Egyptologists have attempted to fix it at the following epochs: Boeckh, B. C. 5702; Unger, 5613; Brugsch, 4455; Lauth, 4157; Lepsius, 3892; Bunsen, 3623. The difference between the two extreme points of the series is amazingly great, for its number of years amounts to no less than 2079. . . . The calculations in question are based on the extracts already often mentioned from a work by the Egyptian priest Manetho on the history of Egypt. That learned man had then at his command the annals of his country's history, which were preserved in the temples, and from them, the best and most accurate sources, he derived the materials for his work, composed in the Greek language, on the history of the ancient Egyptian Dynasties. His book, which is now lost, contained a general review of the kings of the land, divided into Thirty Dynasties, arranged in the order of their names, with the lengths of their reigns, and the total duration of each dynasty. Though this invaluable work was little known and certainly but little regarded by the historians of the old classical age, large extracts were made from it by some of the ecclesiastical writers. In process of time the copyists, either by error or designedly, corrupted the names and the numbers, and thus we only possess at the present day the ruins instead of the complete building. The truth of the original and the authenticity of its sources were first proved by the deciphering of the Egyptian writings. And thus the Manethonian list served, and still serves, as a guide for assigning to the royal names read on the monuments their places in the Dynasties."—H. Brugsch-Bey, *Hist. of Egypt under the Pharaohs*, ch. 4.—See, also, **MANETHO**, LIST OF.—Brugsch-Bey dates the first twelve dynasties as follows: The First Dynasty; of Thinis: B. C. 4400-4166.—The Second; of Thinis: 4133-4000.—The Third; of Memphis: 3966-3766.—The Fourth; of Memphis: 3733-3600.—The Fifth; of Elephantine:

* *Kami* in the edition of 1891.

3566-3333. — The Sixth; of Memphis: 3300-3066. — The Seventh to the Eleventh (a confused and obscure period); 3033-2500. — The Twelfth; of Thebes: 2466-2266 — H. Brugsch-Bey, *Hist. of Egypt under the Pharaohs*, app. A. — A later reckoning from later discoveries of data, is given by the explorer of Egyptian antiquities, Mr. Petrie, in the following: "We . . . have as a starting-point for our backward reckoning the accession of the XVIIIth dynasty about 1587 B. C. From this we can reckon in the dynastic data given by Manetho; following this account rather than the totals of reigns, as he appears to have omitted periods when dynasties were contemporary, as in the 43 years for the XIth after the close of the Xth. Thus, from the above starting-point of 1587 B. C., we reach the following results, solely by using material which has been discussed and settled in this history on its own merits alone, and without any ulterior reckoning in total periods.

Dynasty	Years.	B. C.
I.	263	4777
II.	302	4514
III.	214	4212
IV.	277	3998
V.	218	3721
VI.	181 (T. P.)	3503
VII.	70	3322
VIII.	146	3252
IX.	100	3106
X.	185	3006
XI.	43	2821
XII.	213 (T. P.)	2778
XIII.	453	2565
XIV.	184	2112
XV.	190	1928
XVI.	151	1738
XVII.	260	1587
XVIII.	—	1327

. . . In the present rough state of the astronomical data, and the doubts as to the MS. authorities, we have reached quite as close an equivalence as we may hope for; and at least there is enough to show us that we may trust to the nearest century with fair grounds of belief. These dates, then, are what I have provisionally adopted in this history; and though they are stated to the nearest year, for the sake of intercomparison, it must always be remembered that they only profess to go within a century in the earlier parts of the scale."—W. M. Flinders Petrie, *A History of Egypt from the Earliest Times to the XVIth Dynasty*, ch. 11.

Origin of the ancient people.—"The Egyptians, together with some other nations, form, as it would seem, a third branch of that [the Caucasian] race, namely, the family called Cushite, which is distinguished by special characters from the Pelagian and the Semitic families. . . . The Egyptian language . . . shows in no way any trace of a derivation and descent from the African families of speech. On the contrary, the primitive roots and the essential elements of the Egyptian grammar point to such an intimate connection with the Indo-Germanic and Semitic languages that it is almost impossible to mistake the close relations which formerly prevailed between the Egyptians and the races called Indo-Germanic and Semitic."—H. Brugsch-Bey, *Hist. of Egypt under the Pharaohs*, ch. 1.—"It has been maintained by some that the immigration

was from the south, the Egyptians having been a colony from Ethiopia which gradually descended the Nile and established itself in the middle and lower portions of the valley. But modern research has shown quite unmistakably that the movement of the Egyptians was in the opposite direction. . . . We must look, then, rather to Syria or Arabia than to Ethiopia as the cradle of the Egyptian nation."—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 3.—"So far as our knowledge reaches, the northern edge of Africa, like the valley of the Nile as far as the marshes at the foot of the Abyssinian hills, was inhabited by nations who in colour, language, and customs were sharply distinguished from the negro. These nations belonged to the whites; their languages were most closely allied to the Semitic. From this, and from their physical peculiarities, the conclusion has been drawn that these nations at some time migrated from Asia to the soil of Africa. They formed a vast family, whose dialects still continue in the language of the Berbers. Assisted by the favourable conditions of their land, the tribe which settled on the Lower Nile quickly left their kinsmen far behind. Indeed the latter hardly rose above a pastoral life. The descendants of these old inhabitants of the valley of the Nile, in spite of the numerous layers which the course of centuries has subsequently laid upon the soil of the land, still form the larger part of the population of Egypt, and the ancient language is preserved in the dialect of the Copts."—M. Duncker, *Hist. of Antiquity*, bk. 1, ch. 1.

The Old Empire and the Middle Empire.—"The direct descendants of Menes [or Mena] form the First Dynasty, which, according to Manetho, reigned 253 years. No monument contemporary with these princes has come down to us. . . . The Second Dynasty, to which Manetho assigns nine kings, lasted 302 years. It was also originally from this [or Thinis], and probably related to the First. . . . When this family had become extinct, a Dynasty, originally from Memphis, seized the throne, forming the Third, and to it a duration of 214 years is attributed. . . . With the Fourth Dynasty, Memphite like the Third, and which reigned 284 years, history becomes clearer and monuments more numerous. This was the age of the three Great Pyramids, built by the three kings, Khufu (the Cheops of Herodotus), Shafra (Chefred), and Menkara (Mycerinus). . . . The Fifth Dynasty came originally from Elephantine, at the southern extremity of Upper Egypt, and there possibly the kings generally resided, though at the same time Memphis was not deprived of its importance. . . . On the death of the last king of the Fifth Dynasty, a new family, of Memphitic origin according to Manetho, came to the throne. . . . Primitive art attained its highest point under the Sixth Dynasty. . . . But, from the time of the civil commotions in which Neit-aker [the Nitocris of Herodotus] perished, Egyptian civilization underwent a sudden and unaccountable eclipse. From the end of the Sixth Dynasty to the commencement of the Eleventh, Manetho reckons 436 years, and for this whole period the monuments are absolutely silent. Egypt seems then to have disappeared from the rank of nations; and when this long slumber ended, civilization commenced a new career, entirely independent of the past. . . . Thus ends that period of nineteen centuries,

which modern scholars know as the Old Empire. . . . Thebes did not exist in the days of the glory of the Old Empire. The holy city of Amen seems to have been founded during the period of anarchy and obscurity, succeeding, as we have said, to the Sixth Dynasty. Here was the birthplace of that renewed civilization, that new monarchy, we are accustomed to call the Middle Empire, the middle age in fact of ancient Egypt—a middle age anterior to the earliest ages of all other history. From Thebes came the six kings of the Eleventh Dynasty. . . . We again quote the excellent remarks of M. Mariette: 'When, with the Eleventh Dynasty, we see Egypt awake from her long slumber, all old traditions appear to be forgotten; the proper names used in ancient families, the titles of functionaries, the style of writing, and even the religion—all seem new. This, Elephantine, and Memphis, are no longer the favourite capitals. Thebes for the first time becomes the seat of sovereign power. Egypt, moreover, has lost a considerable portion of her territory, and the authority of her legitimate kings hardly extends beyond the limited district of the Thebaid. The study of the monuments confirms these general views; they are rude, primitive, sometimes coarse; and when we look at them we may well believe that Egypt, under the Eleventh Dynasty, again passed through a period of infancy, as she had already done under the Third Dynasty.' A dynasty probably related to, and originally from the same place as these first Theban princes succeeded them. . . . This Twelfth Dynasty reigned for 213 years, and its epoch was one of prosperity, of peace at home and glorious achievements abroad. . . . Although the history of the Twelfth Dynasty is clear and well known, illustrated by numerous monuments, there is, nevertheless, no period in the annals of Egypt more obscure than the one closing with the Thirteenth Dynasty. It is one long series of revolutions, troubles, and internal dissensions, closed by a terrible catastrophe, the greatest and most lasting recorded in Egyptian history, which a second time interrupted the march of civilization on the banks of the Nile, and for a while struck Egypt from the list of nations."—F. Lenormant and E. Chevallier, *Manual of Ancient Hist. of the East*, bk. 3, ch. 1-2.

The Hyksos, or Shepherd-Kings.—According to the Manethonian account which the Jewish historian Josephus has preserved to us by transcribing it, the Egyptian Netherlands were at a certain time overspread by a wild and rough people, which came from the countries of the east, overcame the native kings who dwelt there, and took possession of the whole country, without finding any great opposition on the part of the Egyptians. They were called Hyksos, which Josephus interpreted as meaning Shepherd-kings. "Hyk," he explained, meant King, in the holy language, and "sos," in the dialect of the people, signified Shepherd. But Dr. Brugsch identifies "sos" with the name "Shasu," which the old Egyptians gave to the Bedouins, whose name became equivalent to Shepherds. Hence Dr. Brugsch inclines to the ancient opinion transmitted by Josephus, that the Hyksos were Arabs or Bedouins—the Shasu of the Egyptian records, who

hung on the northeastern frontier of Egypt from the most ancient times and were always pressing into the country, at every opportunity. But many objections against this view are raised and the different theories advanced to account for the Hyksos are quite numerous. Canon Rawlinson says: "The Egyptians of the time of Herodotus seem to have considered that they were Philistines. Moderns have regarded them as Canaanites, Syrians, Hittites. It is an avoidance rather than a solution of the difficulty to say that they were 'a collection of all the nomad hordes of Arabia and Syria' [Lenormant], since there must have been a directing hand. . . . On the whole, therefore, we lean to the belief that the so-called Hyksos or Shepherds were Hittites."—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 19.—"It is maintained on good authority that the Hyksos, or Shepherd-Kings, had secured possession of the eastern frontier of Lower Egypt immediately after the close of the Twelfth Dynasty; that at this time the Thirteenth and the Fourteenth Dynasties ruled contemporaneously, the former in Upper, the latter in Lower Egypt; one was the legitimate, the other the illegitimate line; but authors are not in accord as to their right of priority. It is supposed that, while Egypt claimed the Thirteenth Dynasty as her own, the Hyksos usurped the mastery over the Fourteenth Dynasty, and governed through the agency of its kings, treating them meanwhile as vassal chiefs. These local kings had cities from which they were unable to escape, and were deprived of an army of defence. Such was the state of the country for 184 years, when the Fourteenth Dynasty died out, and when the Fifteenth Dynasty, constituted of six successive Hyksos kings, took the reins of government into their own hands. Lieblein, whose views we are now endeavouring to express, assigns as the date of the invasion of the Hyksos 2108 years B. C. . . . It is not improbable that the well-known journey of Abraham to Egypt was made during the early period of the reign of the Shepherd-Kings; whilst the visit of Joseph occurred near the close of their power."—E. Wilson, *The Egypt of the Past*, ch. 5.—"The Shepherds possessed themselves of Egypt by violence," writes Mariette-Bey, "but the civilization which they immediately adopted on their conquest was rather Egyptian than Asiatic, and the discoveries of Avaris (San) prove that they did not even banish from their temples the gods of the ancient Egyptian Pantheon." In fact the first shepherd-king, Solatis himself, employed an Egyptian artist to inscribe . . . his title on the statue of a former legitimate Pharaoh. "They did not disturb the civilization more than the Persians or the Greeks, but simply accepted the higher one they had conquered." So our revered scholar Dr. Birch has summed up the matter; and Prof. Maspero has very happily described it thus: "The popular hatred loaded them with ignominious epithets, and treated them as accursed, plague-stricken, leprous. Yet they allowed themselves very quickly to be domesticated. . . . Once admitted to the school of Egypt, the barbarians progressed quickly in the civilized life. The Pharaonic court reappeared around these shepherd-kings, with all its pomp and all its following of functionaries great and small. The royal style and title of Cheops and the Amenemhas were fitted to the outlandish names of Jannes and Apapi.

The Egyptian religion, without being officially adopted, was tolerated, and the religion of the Canaanites underwent some modifications to avoid hurting beyond measure the susceptibility of the worshippers of Osiris."—H. G. Tomkins, *Studies on the Times of Abraham*, ch. 8.—In a late Italian work ("Gli Hyksôs") by Dr. C. A. de Cara, "he puts together all that is ascertained in regard to them [the Hyksôs], criticises the theories that have been propounded on their behalf, and suggests a theory of his own. Nothing that has been published on the subject seems to have escaped his notice. . . . His own view is that the Hyksôs represented a confederacy of various Asiatic tribes, under the leadership of the northern Syrians. That their ruling class came from this part of the world seems to me clear from the name of their supreme god Sutekh, who occupied among them the position of the Semitic Baal."—A. H. Sayce, *The Hyksôs* (*Academy*, Sept. 20, 1890).—"Historical research concerning the history of the Hyksôs may be summed up as follows:—I. A certain number of non-Egyptian kings of foreign origin, belonging to the nation of the Menti, ruled for a long time in the eastern portion of the Delta. II. These chose as their capitals the cities of Zoan and Avaris, and provided them with strong fortifications. III. They adopted not only the manners and customs of the Egyptians, but also their official language and writing, and the order of their court was arranged on Egyptian models. IV. They were patrons of art, and Egyptian artists erected, after the ancient models, monuments in honour of these usurpers, in whose statues they were obliged to reproduce the Hyksôs physiognomy, the peculiar arrangement of the beard and head-dress, as well as other variations of their costume. V. They honored Sutekh, the son of Nut, as the supreme god of their newly acquired country, with the surname Nub, 'the golden.' He was the origin of all that is evil and perverse in the visible and invisible world, the opponent of good and the enemy of light. In the cities of Zoan and Avaris, splendid temples were constructed in honour of this god, and other monuments raised, especially Sphinxes, carved out of stone from Syene. VI. In all probability one of them was the founder of a new era, which most likely began with the first year of his reign. Down to the time of the second Ramses, four hundred years had elapsed of this reckoning which was acknowledged even by the Egyptians. VII. The Egyptians were indebted to their contact with them for much useful knowledge. In particular their artistic views were expanded and new forms and shapes, notably that of the winged sphinx, were introduced, the Semitic origin of which is obvious at a glance. . . . The inscriptions on the monuments designate that foreign people who once ruled in Egypt by the name of Men or Menti. On the walls of the temple of Edfû it is stated that 'the inhabitants of the land of Asher are called Menti.' . . . In the different languages, . . . and in the different periods of history, the following names are synonymous: Syria, Rutennu of the East, Asher, and Menti."—"Since, on the basis of the most recent and best investigations in the province of ancient Egyptian chronology, we reckon the year 1350 B. C. as a mean computation for the reign of Ramses, the reign of the Hyksôs king, Nub, and probably its beginning, falls in the year 1750 B. C., that is, 400 years before Ramses II. Although we are com-

pletely in the dark as to the place King Nub occupied in the succession of the kindred princes of his house, yet the number mentioned is important, as an approximate epoch for the stay of the foreign kings in Egypt. According to the statement in the Bible, the Hebrews from the immigration of Jacob into Egypt until the Exodus remained 430 years in that land. Since the Exodus from Egypt took place in the time of Menepthah II., the son of Ramses II.—the Pharaoh of the oppression—the year B. C. 1300 may be an approximate date. If we add to this 430 years, as expressing the total duration of the sojourn of the Hebrews in Egypt, we arrive at the year 1730 B. C. as the approximate date for the immigration of Jacob into Egypt, and for the time of the official career of Joseph at the court of Pharaoh. In other words, the time of Joseph (1730 B. C.) must have fallen in the period of the Hyksôs domination, about the reign of the above-mentioned prince Nub (1750 B. C.)."—H. Brugsch-Bey, *Egypt under the Pharaohs* (edition of 1891, by M. Brodrick), pp. 106-109, and 126.—See JEWS: THE CHILDREN OF ISRAEL IN EGYPT.

ALSO IN: F. C. H. Wendel, *Hist. of Egypt*, ch. 4.

About B. C. 1700-1400.—The New Empire.—The Eighteenth Dynasty.

—"The dominion of the Hyksôs by necessity gave rise to profound internal divisions, alike in the different princely families and in the native population itself. Factions became rampant in various districts, and reached the highest point in the hostile feeling of the inhabitants of Patoris or the South country against the people of Patomit or North country, who were much mixed with foreign blood. . . . From this condition of divided power and of mutual jealousy the foreign rulers obtained their advantage and their chief strength, until King Aahmes made himself supreme."—H. Brugsch-Bey, *Egypt under the Pharaohs* (edition of 1891, by M. Brodrick).—"The duration of the reign of this first Pharaoh of the New Empire was twenty-five years. He was succeeded by his son Amenhotep I. and the latter by his son Thothmes I. "The reign of Thothmes I. . . . derives its chief distinction from the fact that, at this period of their history, the Egyptians for the first time carried their arms deep into Asia, overrunning Syria, and even invading Mesopotamia, or the tract between the Tigris and the Euphrates. Hitherto the furthest point reached in this direction had been Sharuben in Southern Palestine. . . . Syria was hitherto almost an undiscovered region to the powerful people which nurturing its strength in the Nile valley, had remained content with its own natural limits and scarcely grasped at any conquests. A time was now come when this comparative quietude and absence of ambition were about to cease. Provoked by the attack made upon her from the side of Asia, and smarting from the wounds inflicted upon her pride and prosperity by the Hyksôs during the period of their rule, Egypt now set herself to retaliate, and for three centuries continued at intervals to pour her armies into the Eastern continent, and to carry fire and sword over the extensive and populous regions which lay between the Mediterranean and the Zagros mountain range. There is some uncertainty as to the extent of her conquests; but no reasonable doubt can be entertained that for a space of three hundred years Egypt was the most powerful and the most

aggressive state that the world contained, and held a dominion that has as much right to be called an 'Empire' as the Assyrian, the Babylonian or the Persian. While Babylonia, ruled by Arab conquerors, declined in strength, and Assyria proper was merely struggling into independence, Egypt put forth her arm and grasped the fairest regions of the earth's surface." The immediate successor of Thothmes I. was his son, Thothmes II., who reigned in association with a sister of masculine character, queen Hatsa. The strong-minded queen, moreover, prolonged her reign after the death of this elder brother, until a younger brother, Thothmes III. displaced her. The Third Thothmes was the greatest of Egyptian conquerors and kings. He carried his arms beyond the Euphrates, winning a memorable victory at Megiddo over the confederated kings of the Syrian and Mesopotamian countries. He left to his son (Amenhotep II.) "a dominion extending about 1,100 miles from north to south, and (in places) 450 miles from west to east." He was a great builder, likewise, and "has left the impress of his presence in Egypt more widely than almost any other of her kings, while at the same time he has supplied to the great capitals of the modern world their most striking Egyptian monuments." The larger of the obelisks now standing in Rome and Constantinople, as well as those at London and New York were all of them produced in the reign of this magnificent Pharaoh. The two obelisks last named stood originally, and for fourteen centuries at the front of the great temple of the sun, in Heliopolis. They were removed by the Roman Emperor, Augustus, B. C. 23, to Alexandria, where they took in time the name of Cleopatra's Needles,—although Cleopatra had no part in their long history. After nineteen centuries more of rest, these strangely coveted monuments were again disturbed, and transported into lands which their builder knew not of. The later kings of the Eighteenth Dynasty seem to have, none of them, possessed the energy and character of Thothmes III. The line ended about 1400 B. C. with Horemheb, who left no heirs.—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 20.

ALSO IN: H. Brugsch-Bey, *Egypt under the Pharaohs*, ch. 13.—H. H. Goringe, *Egyptian Obelisks*.

About B. C. 1500-1400.—The Tell el-Amarna Tablets.—Correspondence of the Egyptian kings with Babylonia, Assyria, Armenia, Asia Minor, Syria and Palestine.—"The discovery made in 1887 by a peasant woman of Middle Egypt may be described as the most important of all contributions to the early political history of Western Asia. We have become possessed of a correspondence, dating from the fifteenth century B. C., which was carried on during the reigns of three Egyptian kings, with the rulers of Babylon, Assyria, Armenia, Asia Minor, Syria, and Palestine, during a period of great activity, when revolutions which affected the whole history of the east shore lands of the Mediterranean were in progress; and we find in these tablets a contemporary picture of the civilisation of the age. . . . The Tell Amarna tablets represent a literature equal in bulk to about half the Pentateuch, and concerned almost exclusively with political affairs. They are clay tablets, varying from two inches to a foot in length, with a few as large as eighteen inches, covered with cuneiform writing

generally on both sides, and often on the edges as well. The peasantry unearthed nearly the complete collection, including some 320 pieces in all; and explorers afterwards digging on the site have added only a few additional fragments. The greater number were bought for the Berlin Museum, while eighty-two were acquired for England, and the rest remain either in the Boulak Museum at Cairo, or, in a few instances, in the hands of private collectors. . . . Tell Amarna (apparently 'the mound of the tumuli') is an important ruined site on the east bank of the Nile, about a hundred and fifty miles in a straight line south of Cairo. Its Egyptian name is said to have been Khu-en-aten, 'Glory of the Sun-disk.'—*The Tell Amarna Tablets* (Edinburgh Rev., July, 1893).—"The collection of Cuneiform Tablets recently found [1887] at Tell el-Amarna in Upper Egypt, consisted of about three hundred and twenty documents, or portions of documents. The British Museum possesses eighty-two . . . the Berlin Museum has one hundred and sixty, a large number being fragments; the Gizeh Museum has sixty; and a few are in the hands of private persons. . . . In color the Tablets vary from a light to a dark dust tint, and from a flesh-color to dark brick-red. The nature of the clay of which they are made sometimes indicates the countries from which they come. The size of the Tablets in the British Museum varies from 8½ inches x 4½ in. to 2½ in. x 1½ in.; the longest text contains 98 lines, the shortest 10. . . . The greater number are rectangular, and a few are oval; and they differ in shape from any other cuneiform documents known to us. . . . The writing . . . resembles to a certain extent the Neo-Babylonian, i. e., the simplification of the writing of the first Babylonian Empire used commonly in Babylonia and Assyria for about seven centuries B. C. It possesses, however, characteristics different from those of any other style of cuneiform writing of any period now known to exist; and nearly every tablet contains forms of characters which have hitherto been thought peculiar to the Ninevite or Assyrian style of writing. But, compared with the neat, careful hand employed in the official documents drawn up for the kings of Assyria, it is somewhat coarse and careless, and suggests the work of unskilled scribes. One and the same hand, however, appears in tablets which come from the same person and the same place. On some of the large tablets the writing is bold and free; on some of the small ones the characters are confused and cramped, and are groups of strokes rather than wedges. The spelling . . . is often careless, and in some instances syllables have been omitted. At present it is not possible to say whether the irregular spelling is due to the ignorance of the scribe or to dialectic peculiarities. . . . The Semitic dialect in which these letters are written is Assyrian, and is, in some important details, closely related to the Hebrew of the Old Testament. . . . The documents were most probably written between the years B. C. 1500 to 1450. . . . They give an insight into the nature of the political relations which existed between the kings of Western Asia and the kings of Egypt, and prove that an important trade existed between the two countries from very early times. . . . A large number of the present tablets are addressed to 'the King of Egypt,' either Amenophis III. or Amenophis IV. Nearly all of them consist of reports of disasters

to the Egyptian power and of successful intrigues against it, coupled by urgent entreaties for help, pointing to a condition of distraction and weakness in Egypt. . . . The most graphic details of the disorganized condition, and of the rival factions, of the Egyptian dependencies lying on the coastline of Phœnicia and Northern Palestine, are to be gathered from a perusal of the dispatches of the governors of the cities of Byblos, Beyrut and Tyre."—*The Tell el-Amarna Tablets in the British Museum, introd.*—In the present state of cuneiform research I believe it to be impossible to give a translation of the Tell el-Amarna texts which would entirely satisfy the expert or general reader. No two scholars would agree as to any interpretation which might be placed upon certain rare grammatical forms and unknown words in the Babylonian text, and any literal translation in a modern language would not be understood by the general reader on account of the involved style and endless repetition of phrases common to a Semitic idiom and dialect. About the general meaning of the contents of the greater number of the letters there can be no doubt whatever, and it is therefore possible to make a summary of the contents of each letter, which should, as a rule, satisfy the general reader, and at the same time form a guide to the beginner in cuneiform. Summaries of the contents of the Tell el-Amarna tablets in the British Museum have been published in 'The Tell el-Amarna Tablets in the British Museum, with autotype facsimiles,' printed by order of the Trustees, London, 1892, and it is hoped that the transliteration, given in the following pages may form a useful supplement to that work. . . . No. 1. A Letter from Egypt—Amenophis III. to Kallimma (?) Sin, King of Karaduniyash, referring to his proposed marriage with Sukharti, the daughter of Kallimma-Sin, and containing the draft of a commercial treaty, and an allusion to the disappearance of certain chariots and horses. No. 2. Letters from Babylonia—Burraburiyash, King of Karaduniyash, to Amenophis IV., referring to the friendship which had existed between their respective fathers, and the help which had been rendered to the King of Egypt by Burraburiyash himself; the receipt of two manahs of gold is acknowledged and a petition is made for more. No. 3. Burraburiyash, King of Karaduniyash to Amenophis IV., complaining that the Egyptian messengers had visited his country thrice without bringing gifts, and that they withheld some of the gold which had been sent to him from Egypt; Burraburiyash announces the despatch of a gift of lapis-lazuli for the Egyptian princess who was his son's wife. . . . No. 30. Letter from Abi-milki, governor of Tyre, to the King of Egypt, reporting that he believes Zimrida will not be able to stir up disaffection in the city of Sidon, although he has caused much hostility against Tyre. He asks for help to protect the city, and for water to drink and wood to burn, and he sends with his messenger Ili-milki five talents of copper and other gifts for the King of Egypt. He reports that the King of Danuna is dead and that his brother reigns in his stead; one half of the city of Ugarit has been destroyed by fire; the soldiers of the Khatti have departed; Itagamapairi, governor of Kedesb, and Aziru are fighting against Namyawiza. If the King of Egypt will but send a few troops, all will be well with Tyre. . . . No. 43. Letter from the gov-

ernor of a town in Syria to the King of Egypt, reporting that the rebels have asserted their independence; that Biridashwi has stirred up rebellion in the city of Inu-Amma; that its people have captured chariots in the city of Ashtarti; that the kings of the cities of Buzruna and Khalunni have made a league with Biridashwi to slay Namyawiza (who, having taken refuge in Damascus and being attacked by Arzawiya, declared himself to be a vassal of Egypt); that Arzawiya went to the city of Gizza and afterwards captured the city of Shaddu; that Itak-kama ravaged the country of Gizza; and that Arzawiya and Biridashwi have wasted the country of Abitu. No. 44. Continuation (?) of a letter to the King of Egypt, reporting that, owing to the hostilities of Abd-Ashirta, Khāya, an official, was unable to send ships to the country of Anurri, as he had promised. The ships from Arvad which the writer has in his charge, lack their full complement of men for war service, and he urges the king to make use of the ships and crews which he has had with him in Egypt. The writer of the letter also urges the King of Egypt to appoint an Egyptian official over the naval affairs of Sidon, Beyrut and Arvad, and to seize Abd-Ashirta and put him under restraint to prevent him obstructing the manning of the ships of war. . . . No. 58. Letter from the governor of a district in Palestine (?) to the governors of neighbouring states in the land of Canaan, informing them that he is about to send his messenger Akiya on a mission to the King of Egypt, and to place himself and every thing that he has at his disposal. Akiya will go to Egypt by the way of Canaan, and the writer of this letter suggests that any gifts they may have to send to Egypt should be carried by him, for Akiya is a thoroughly trustworthy man."—C. Bezold, *Oriental Diplomacy: Being the transliterated text of the Cuneiform Despatches, preface.*—Under the title of "The Story of a 'Tell,'" Mr. W. M. Flinders Petrie, the successful excavator and explorer of Egyptian antiquities, gave a lecture in London, in June, 1892, in which he described the work and the results of an excavation then in progress under his direction on the supposed site of Lachish, at a point where the maritime plain of Philistia rises to the mountains of Judea, on the route from Egypt into Asia. The chairman who introduced Mr. Petrie defined the word "Tell" as follows: "A Tell is a mound of earth showing by the presence of broken pottery or worked stone that it is the site of a ruined city or village. In England when a house falls down or is pulled down the materials are usually worth the expense of removing for use in some new building. But in Egypt common houses have for thousands of years been built of sun-dried bricks, in Palestine of rough rubble walling, which, on falling, produces many chips, with thick flat roofs of plaster. It is thus often less trouble to get new than to use old material; the sites of towns grow in height, and depressions are filled up." The mound excavated by Mr. Petrie is known as Tell el Hesi. After he left the work it was carried on by Mr. Bliss, and Mr. Petrie in his lecture says: "The last news is that Mr. Bliss has found the long looked for prize, a cuneiform tablet. . . . From the character of the writing, which is the same as on the tablets written in Palestine in 1400 B. C., to the Egyptian king at Tell el Amarna, we have a close

agreement regarding the chronology of the town. Further, it mentions Zimrida as a governor, and this same man appears as governor of Lachish on the tablets found at Tel el Amarna. We have thus at last picked up the other end of the broken chain of correspondence between Palestine and Egypt, of which one part was so unexpectedly found in Egypt a few years ago on the tablets at Tel el Amarna; and we may hope now to recover the Palestinian part of this intercourse and so establish the pre-Israelite history of the land."—W. M. F. Petrie, *The Story of a "Tell" (The City and the Land, lect. 6)*.—See, also, PALESTINE.

About B. C. 1400-1200.—The first of the Ramesides.—The Pharaohs of the Oppression and the Exodus.—"Under the Nineteenth Dynasty, which acquired the throne after the death of Har-em-Hebi [or Hor-em-heb] the fortune of Egypt maintained to some extent its ascendancy; but, though the reigns of some warlike kings throw a bright light on this epoch, the shade of approaching trouble already darkens the horizon." Ramses I. and his son, or son-in-law, Seti I., were involved in troublesome wars with the rising power of the Hittites, in Syria, and with the Shasu of the Arabian desert. Seti was also at war with the Libyans, who then made their first appearance in Egyptian history. His son Ramses II., the Sesostris of the Greeks, who reigned for sixty-seven years, in the fourteenth century B. C., has always been the most famous of the Egyptian kings, and, by modern discovery, has been made the most interesting of them to the Christian world. He was a busy and boastful warrior, who accomplished no important conquests; but "among the Pharaohs he is the builder 'par excellence.' It is almost impossible to find in Egypt a ruin or an ancient mound, without reading his name." . . . It was to these works, probably, that the Israelites then in Egypt were forced to contribute their labor; for the Pharaoh of the oppression is identified, by most scholars of the present day, with this building and boasting Sesostris.—F. Lenormant and E. Chevallier, *Manual of the Ancient Hist. of the East, bk. 3, ch. 3*.—"The extreme length of the reign of Ramses was, as in other histories, the cause of subsequent weakness and disaster. His successor was an aged son, Menptah, who had to meet the difficulties which were easily overcome by the youth of his energetic father. The Libyans and their maritime allies broke the long tranquillity of Egypt by a formidable invasion and temporary conquest of the north-west. The power of the monarchy was thus shaken, and the old king was not the leader to restore it. His obscure reign was followed by others even obscurer, and the Nineteenth Dynasty ended in complete anarchy, which reached its height when a Syrian chief, in what manner we know not, gained the rule of the whole country. It is to the reign of Menptah that Egyptian tradition assigned the Exodus, and modern research has come to a general agreement that this is its true place in Egyptian history. . . . Unfortunately we do not know the duration of the oppression of the Israelites, nor the condition of Lower Egypt during the Eighteenth Dynasty, which, according to the hypothesis here adopted, corresponds to a

great part of the Hebrew sojourn. It is, however, clear from the Bible that the oppression did not begin till after the period of Joseph's contemporaries, and had lasted eighty years before the Exodus. It seems almost certain that this was the actual beginning of the oppression, for it is very improbable that two separate Pharaohs are intended by the 'new king which knew not Joseph' and the builder of Rameses, or, in other words, Ramses II., and the time from the accession of Ramses II. to the end of Menptah's reign can have little exceeded the eighty years of Scripture between the birth of Moses and the Exodus. . . . If the adjustment of Hebrew and Egyptian history for the oppression, as stated above, be accepted, Ramses II. was probably the first, and certainly the great oppressor. His character suits this theory; he was an undoubted autocrat who . . . covered Egypt and Lower Nubia with vast structures that could only have been produced by slave-labor on the largest scale."—R. S. Poole, *Ancient Egypt (Contemp. Rev., Mar., 1879)*.

About B. C. 1300.—Exodus of the Israelites. See JEWS: THE ROUTE OF THE EXODUS.

About B. C. 1200-670.—The decline of the empire of the Pharaohs.—From the anarchy in which the Nineteenth Dynasty came to its end, order was presently restored by the seating in power of a new family, which claimed to be of the Rameside stock. The second of its kings, who called himself Ramses III. and who is believed to be the Rhampsinitus of the Greeks, appears to have been one of the ablest of the monarchs of his line. The security and prosperity of Egypt were recovered under his reign and he left it in a state which does not seem to have promised the rapid decay which ensued. "It is difficult to understand and account for the suddenness and completeness of the collapse. . . . The hieratic chiefs, the high priests of the god Ammon at Thebes, gradually increased in power, usurped one after another the prerogatives of the Pharaohs, by degrees reduced their authority to a shadow, and ended with an open assumption not only of the functions, but of the very insignia of royalty. A space of nearly two centuries elapsed, however, before this change was complete. Ten princes of the name of Ramses, and one called Meri-Tum, all of them connected by blood with the great Rameside house, bore the royal title and occupied the royal palace, in the space between B. C. 1280 and B. C. 1100. Egyptian history during this period is almost wholly a blank. No military expeditions are conducted—no great buildings are reared—art almost disappears—literature holds her tongue." Then came the dynasty of the priest-kings, founded by Her-Hor, which held the throne for more than a century and was contemporary in its latter years with David and Solomon. The Twenty-Second Dynasty which succeeded had its capital at Bubastis and is concluded by Dr. Brugsch to have been a line of Assyrian kings, representing an invasion and conquest of Egypt by Nimrod, the great king of Assyria. Other Egyptologists disagree with Dr. Brugsch in this, and Prof. Rawlinson, the historian of Assyria, finds objections to the hypothe

sis from his own point of view. The prominent monarch of this dynasty was the Sheshonk of Biblical history, who sheltered Jeroboam, invaded Palestine and plundered Jerusalem. Before this dynasty came to an end it had lost the sovereignty of Egypt at large, and its Pharaohs contended with various rivals and invaders. Among the latter, power grew in the hands of a race of Ethiopians, who had risen to importance at Napata, on the Upper Nile, and who extended their power, at last, over the whole of Egypt. The Ethiopian domination was maintained for two-thirds of a century, until the great wave of Assyrian conquest broke upon Egypt in 672 B. C. and swept over it, driving the Ethiopians back to Napata and Meroë.—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 25.

B. C. 670-525.—Assyrian conquest and restored independence.—The Twenty-sixth Dynasty.—The Greeks at Naucratis.—Although Syria and Palestine had then been suffering for more than a century from the conquering arms of the Assyrians, it was not until 670 B. C., according to Prof. Rawlinson, that Esarhaddon passed the boundaries of Egypt and made himself master of that country. His father Sennacherib, had attempted the invasion thirty years before, at the time of his siege of Jerusalem, and had recoiled before some mysterious calamity which impelled him to a sudden retreat. The son avenged his father's failure. The Ethiopian masters of Egypt were expelled and the Assyrian took their place. He "broke up the country into twenty governments, appointing in each town a ruler who bore the title of king, but placing all the others to a certain extent under the authority of the prince who reigned at Memphis. This was Neco, the father of Psammetichus (Psamatik I.)—a native Egyptian of whom we have some mention both in Herodotus and in the fragments of Manetho. The remaining rulers were likewise, for the most part, native Egyptians." These arrangements were soon broken up by the expelled Ethiopian king, Tirhakah, who rallied his forces and swept the Assyrian kinglets out of the country; but Asshur-bani-pal, son and successor of Esarhaddon, made his appearance with an army in 668 or 667 B. C. and Tirhakah fled before him. Again and again this occurred, and for twenty years Egypt was torn between the Assyrians and the Ethiopians, in their struggle for the possession of her. At length, out of the chaos produced by these conflicts there emerged a native ruler—the Psammetichus mentioned above—who subjugated his fellow princes and established a new Egyptian monarchy, which defended itself with success against Assyria and Ethiopia, alike. The Twenty-Sixth Dynasty, of Sais, founded by Psammetichus, is suspected to have been of Libyan descent. It ruled Egypt until the Persian conquest, and brought a great new influence to bear on the country and people, by the introduction of Greek soldiers and traders. It was under this dynasty that the Greek city of Naucratis was founded, on the Canobic branch of the Nile.—G. Rawlinson, *The Five Great Monarchies: Assyria*, ch. 9.—The site of Naucratis, near the Canobic branch of the Nile, was determined by excavations which Mr. W. M. Flinders Petrie began in 1884, and from which

much has been learned of the history of the city and of early relations between the Egyptians and the Greeks. It is concluded that the settlement of Naucratis dates from about 660 B. C.—not long after the beginning of the reign of Psammetichus—and that its Greek founders became the allies of that monarch and his successors against their enemies. "All are agreed that before the reign of Psammetichus and the founding of Naucratis, Egypt was a sealed book to the Greeks. It is likely that the Phoenicians, who were from time to time the subjects of the Pharaohs, were admitted, where aliens like the Greeks were excluded. We have indeed positive evidence that the Egyptians did not wish strange countries to learn their art, for in a treaty between them and the Hittites it is stipulated that neither country shall harbour fugitive artists from the other. But however the fact may be accounted for, it is an undoubted fact that long before Psammetichus threw Egypt open to the foreigner, the Phoenicians had studied in the school of Egyptian art, and learned to copy all sorts of handiwork procured from the valley of the Nile. . . . According to Herodotus and Diodorus, the favour shown to the Greeks by the King was the cause of a great revolt of the native Egyptian troops, who left the frontier-fortresses, and marched south beyond Elephantine, where they settled, resisting all the entreaties of Psammetichus, who naturally deplored the loss of the mainstay of his dominions, and developed into the race of the Sebidae. Wiedemann, however, rejects the whole story as unhistorical, and certainly, if we closely consider it, it contains great inherent improbabilities. . . . Psammetichus died in B. C. 610, and was succeeded by his son Necho, who was his equal in enterprise and vigour. This King paid great attention to the fleet of Egypt, and Greek shipwrights were set to work on both the Mediterranean and Red Seas to build triremes for the State navy. A fleet of his ships, we are told, succeeded in sailing round Africa, a very great feat for the age. The King even attempted the task, of which the completion was reserved for the Persian Darius, the Ptolemies, and Trajan, of making a canal from the Mediterranean to the Red Sea. Herodotus says that, after sacrificing the lives of 120,000 men to the labour and heat of the task, he gave it up, in consequence of the warning of an oracle that he was toiling only for the barbarians. . . . Necho, like his father, must needs try the edge of his new weapon, the Ionian mercenaries, on Asia. At first he was successful. Josiah, King of Judah, came out against him, but was slain, and his army dispersed. Greek valour carried Necho as far as the Euphrates. . . . But Nebuchadnezzar, son of the King of Babylon, marched against the invaders, and defeated them in a great battle near Carchemish. His father's death recalled him to Babylon, and Egypt was for the moment saved from counter-invasion by the stubborn resistance offered to the Babylonian arms by Jehoiakim, King of Judah, a resistance fatal to the Jewish race; for Jerusalem was captured after a long siege, and most of the inhabitants carried into captivity. Of Psammetichus II., who succeeded Necho, we should know but little were it not for the archaeological record. Herodotus only says that he attacked Ethiopia, and died after a reign of six years. But of the expedition thus summarily recorded

we have a lasting and memorable result in the well-known inscriptions written by Rhodians and other Greek mercenaries on the legs of the colossi at Abu Simbel in Nubia, which record how certain of them came thither in the reign of Psammitichus, pushing up the river in boats as far as it was navigable, that is, perhaps, up to the second cataract. . . . Apries, the Hophra of the Bible, was the next king. The early part of his reign was marked by successful warfare against the Phoenicians and the peoples of Syria; but, like his predecessor, he was unable to maintain a footing in Asia in the face of the powerful and warlike Nebuchadnezzar. The hostility which prevailed between Egypt and Babylon at this time caused King Apries to open a refuge for those Jews who fled from the persecution of Nebuchadnezzar. He assigned to their leaders, among whom were the daughters of the King of Judah, a palace of his own at Daphnae, 'Pharaoh's house at Tahpanhes,' as it is called by Jeremiah. That prophet was among the fugitives, and uttered in the palace a notable prophecy (xliiii. 9) that King Nebuchadnezzar should come and spread his conquering tent over the pavement before it. Formerly it was supposed that this prophecy remained unfulfilled, but this opinion has to be abandoned. Recently-discovered Egyptian and Babylonian inscriptions prove that Nebuchadnezzar conquered Egypt as far as Syene. . . . The fall of Apries was brought about by his ingratitude to the Greeks, and his contempt for the lives of his own subjects. He had formed the project of bringing under his sway the Greek cities of the Cyrenaica. . . . Apries despatched against Cyrene a large force; but the Cyreneans bravely defended themselves, and as the Egyptians on this occasion marched without their Greek allies, they were entirely defeated, and most of them perished by the sword, or in the deserts which separate Cyrene from Egypt. The defeated troops, and their countrymen who remained behind in garrison in Egypt, imputed the disaster to treachery on the part of Apries. . . . They revolted, and chose as their leader Amasis, a man of experience and daring. But Apries, though deserted by his subjects, hoped still to maintain his throne by Greek aid. At the head of 30,000 Ionians and Carians he marched against Amasis. At Momemphis a battle took place between the rival kings and between the rival nations; but the numbers of the Egyptians prevailed over the arms and discipline of the mercenaries, and Apries was defeated and captured by his rival, who, however, allowed him for some years to retain the name of joint-king. It is the best possible proof of the solidity of Greek influence in Egypt at this time that Amasis, though set on the throne by the native army after a victory over the Greek mercenaries, yet did not expel these latter from Egypt, but, on the contrary, raised them to higher favour than before. . . . In the delightful dawn of connected European history we see Amasis as a wise and wealthy prince, ruling in Egypt at the time when Polycrates was tyrant of Samos; and when Croesus of Lydia, the richest king of his time, was beginning to be alarmed by the rapid expansion of the Persian power under Cyrus. . . . In the days of Psammitichus III., the son of Amasis, the storm which had overshadowed Asia broke upon Egypt. One of the leaders of the Greek

mercenaries in Egypt named Phanes, a native of Halicarnassus, made his way to the Persian Court, and persuaded Cambyzes, who, according to the story, had received from Amasis one of those affronts which have so often produced wars between despots, to invade Egypt in full force."—P. Gardner, *New Chapters in Greek History*, ch. 7.

B. C. 525-332.—Persian conquest and sovereignty.—The kings of the Twenty-Sixth or Saite Dynasty maintained the independence of Egypt for nearly a century and a half, and even revived its military glories briefly, by Necho's ephemeral conquests in Syria and his overthrow of Josiah king of Judah. In the meantime, Assyria and Babylonia had fallen and the Persian power raised up by Cyrus had taken their place. In his own time, Cyrus did not finish a plan of conquest which included Egypt; his son Cambyzes took up the task. "It appears that four years were consumed by the Persian monarch in his preparations for his Egyptian expedition. It was not until B. C. 525 that he entered Egypt at the head of his troops and fought the great battle which decided the fate of the country. The struggle was long and bloody [see PERSIA: B. C. 549-521]. Psammenitus, who had succeeded his father Amasis, had the services, not only of his Egyptian subjects, but of a large body of mercenaries besides, Greeks and Carians. . . . In spite of their courage and fanaticism, the Egyptian army was completely defeated. . . . The conquest of Egypt was followed by the submission of the neighbouring tribes. . . . Even the Greeks of the more remote Barca and Cyrene sent gifts to the conqueror and consented to become his tributaries." But Cambyzes wasted 50,000 men in a disastrous expedition through the Libyan desert to Ammon, and he retreated from Ethiopia with loss and shame. An attempted rising of the Egyptians, before he had quitted their country, was crushed with merciless severity. The deities, the temples and the priests of Egypt were treated with insult and contempt and the spirit of the people seems to have been entirely broken. "Egypt became now for a full generation the obsequious slave of Persia, and gave no more trouble to her subjugator than the weakest, or the most contented, of the provinces."—Geo. Rawlinson, *The Five Great Monarchies: Persia*, ch. 7.—"The Persian kings, from Cambyzes to Darius II. Nothus, are enrolled as the Twenty-Seventh Dynasty of Manetho. The ensuing revolts [see ATHENS: B. C. 460-449] are recognized in the Twenty-Eighth (Saite) Dynasty, consisting only of Amyrtaeus, who restored the independence of Egypt (B. C. 414-408), and the Twenty-Ninth (Mendesian) and Thirtieth (Sebennyte) Dynasties (about B. C. 408-353), of whose intricate history we need only here say that they ruled with great prosperity and have left beautiful monuments of art. The last king of independent Egypt was Nectanebo II., who succumbed to the invasion of Artaxerxes Ochus, and fled to Ethiopia (B. C. 353). The last three kings of Persia, Ochus, Arses, and Darius Codomannus, form the Thirty-First Dynasty of Manetho, ending with the submission of Egypt to Alexander the Great (B. C. 332)."—P. Smith, *Ancient Hist. of the East (Students')*, ch. 8.

ALSO IN: S. Sharpe, *Hist. of Egypt*, ch. 5.

B. C. 332.—Alexander's conquest.—"In the summer of 332 (after the siege and destruction of Tyre—see TYRE: B. C. 332, and MACEDONIA, &c.: B. C. 334-330) Alexander set forward on his march toward Egypt, accompanied by the fleet, which he had placed under the orders of Hephaestion." But, being detained on the way several months by the siege of Gaza, it was not before December that he entered Egypt. "He might safely reckon not merely on an easy conquest, but on an ardent reception, from a people who burnt to shake off the Persian tyranny. . . . Mazaces [the Persian commander] himself, as soon as he heard of the battle of Issus, became aware that all resistance to Alexander would be useless, and met him with a voluntary submission. At Pelusium he found the fleet, and, having left a garrison in the fortress, ordered it to proceed up the Nile as far as Memphis, while he marched across the desert. Here he conciliated the Egyptians by the honours which he paid to all their gods, especially to Apis, who had been so cruelly insulted by the Persian invaders. . . . He then embarked, and dropt down the western or Canobic arm of the river to Canopus, to survey the extremity of the Delta on that side, and having sailed round the lake Mareotis, landed on the narrow belt of low ground which parts it from the sea, and is sheltered from the violence of the northern gales . . . by a long ridge of rock, then separated from the main land by a channel, nearly a mile (seven stades) broad and forming the isle of Pharos. On this site stood the village of Racotis, where the ancient kings of Egypt had stationed a permanent guard to protect this entrance of their dominions from adventurers. . . . Alexander's keen eye was immediately struck by the advantages of this position for a city, which should become a great emporium of commerce, and a link between the East and the West. . . . He immediately gave orders for the beginning of the work, himself traced the outline, which was suggested by the natural features of the ground itself, and marked the site of some of the principal buildings, squares, palaces and temples" (see ALEXANDRIA: B. C. 332). Alexander remained in Egypt until the spring of 331, arranging the occupation and administration of the country. "The system which he established served in some points as a model for the policy of Rome under the Emperors." Before quitting the country he made a tollsome march along the coast, westward, and thence, far into the desert, to visit the famous oracle of Ammon.—C. Thirlwall, *Hist. of Greece*, ch. 50.

B. C. 323-30.—The kingdom of the Ptolemies.—In the division of the empire of Alexander the Great between his generals, when he died, Ptolemy Lagus—reputed to be a natural son of Alexander's father Philip—chose Egypt (see MACEDONIA: B. C. 323-316), with a modesty which proved to be wise. In all the provinces of the Macedonian conquest, it was the country most easily to be held as an independent state, by reason of the sea and desert which separated it from the rest of the world. It resulted from the prudence of Ptolemy that he founded a kingdom which lasted longer and enjoyed more security and prosperity than any other among the monarchies of the Diadochi. He was king of Egypt, in fact, for seventeen years before, in 307, B. C., he ventured to

assume the name (see MACEDONIA: B. C. 310-301). Meantime, he had added to his dominion the little Greek state of Cyrene, on the African coast with Phœnicia, Judea, Coele-Syria, and the island of Cyprus. These latter became disputed territory, fought over for two centuries, between the Ptolemies and the Seleucids, sometimes dominated by the one and sometimes by the other (see SELEUCIDÆ: B. C. 281-224, and 224-187). At its greatest extent, the dominion of the Ptolemies, under Ptolemy Philadelphus, son of Ptolemy Lagus, included large parts of Asia Minor and many of the Greek islands. Egypt and Cyrene they held, with little disturbance, until Rome absorbed them. Notwithstanding the vices which the family of Ptolemy developed, and which were as rank of their kind as history can show, Egypt under their rule appears to have been one of the most prosperous countries of the time. In Alexandria, they more than realized the dream of its Macedonian projector. They made it not only the wealthiest city of their day, but the greatest seat of learning,—the successor of Athens as the capital of Greek civilization in the ancient world.—S. Sharpe, *Hist. of Egypt*, ch. 7-12.—The first Ptolemy abdicated in favor of his son, Ptolemy Philadelphus, in 284 B. C., and died in the second year following. See MACEDONIA: B. C. 297-280.—"Although the political constitution of Egypt was not greatly altered when the land fell into Greek hands, yet in other respects great changes took place. The mere fact that Egypt took its place among a family of Hellenistic nations, instead of claiming as of old a proud isolation, must have had a great effect on the trade, the manufactures, and the customs of the country. To begin with trade. Under the native kings Egypt had scarcely any external trade, and trade could scarcely spring up during the wars with Persia. But under the Ptolemies, intercourse between Egypt and Sicily, Syria or Greece, would naturally and necessarily advance rapidly. Egypt produced manufactured goods which were everywhere in demand; fine linen, ivory, porcelain, notably that papyrus which Egypt alone produced, and which was necessary to the growing trade in manuscripts. Artificial barriers being once removed, enterprising traders of Corinth and Tarentum, Ephesus and Rhodes, would naturally seek these goods in Egypt, bringing in return whatever of most attractive their own countries had to offer. It seems probable that the subjects of the Ptolemies seldom or never had the courage to sail direct down the Red Sea to India. In Roman times this voyage became not unusual, but at an earlier time the Indian trade was principally in the hands of the Arabs of Yemen and of the Persian Gulf. Nevertheless the commerce of Egypt under the Ptolemies spread eastwards as well as westwards. The important towns of Arsinoë and Berenice arose on the Red Sea as emporia of the Arabian trade. And as always happens when Egypt is in vigorous hands, the limits of Egyptian rule and commerce were pushed further and further up the Nile. The influx into Alexandria and Memphis of a crowd of Greek architects, artists, and artisans, could not fail to produce movement in that stream of art which had in Egypt long remained all but stagnant. . . . If we may trust the somewhat over-coloured and flighty panegyrics which have

come down to us, the material progress of Egypt under Ptolemy Philadelphus was most wonderful. We read, though we cannot for a moment trust the figures of Appian, that in his reign Egypt possessed an army of 200,000 foot soldiers and 40,000 horsemen, 300 elephants and 2,000 chariots of war. The fleet at the same period is said to have included 1,500 large vessels, some of them with twenty or thirty banks of oars. Allowing for exaggeration, we must suppose that Egypt was then more powerful than it had been since the days of Rameses."—P. Gardner, *New Chapters in Greek History*, ch. 7.—See, also, ALEXANDRIA: B. C. 282-246; and EDUCATION, ANCIENT: ALEXANDRIA.

B. C. 80-48.—Strife among the Ptolemies.—Roman pretensions.—The throne of Egypt being disputed, B. C. 80, between Cleopatra Berenice, who had seized it, and her step-son, Ptolemy Alexander, then in Rome, the latter bribed the Romans to support his claims by making a will in which he named the Roman Republic as his heir. The Senate, thereat, sent him to Alexandria with orders that Berenice should marry him and that they should reign jointly, as king and queen. The order was obeyed. The foully mated pair were wedded, and, nineteen days afterwards, the young king procured the death of his queen. The crime provoked an insurrection in which Ptolemy Alexander was slain by his own guard. This ended the legitimate line of the Ptolemies; but an illegitimate prince, usually called Auletes, or "the piper," was put on the throne, and he succeeded in holding it for twenty-four years. The claim of the Romans, under the will of Ptolemy Alexander, seems to have been kept in abeyance by the bribes which Auletes employed with liberality among the senatorial leaders. In 58 B. C. a rising at Alexandria drove Auletes from the throne; in 54 B. C. he bought the support of Gabinius, Roman pro-consul in Syria, who reinstated him. He died in 51 B. C. leaving by will his kingdom to his elder daughter, Cleopatra, and his elder son, Ptolemy, who, according to the abominable custom of the Ptolemies, were to marry one another and reign together. The Roman people, by the terms of the will were made its executors. When, therefore, Cæsar, coming to Alexandria, three years afterwards, found the will of Auletes set at naught, Ptolemy occupying the throne, alone, and Cleopatra struggling against him, he had some ground for a pretension of right to interfere.—S. Sharpe, *Hist. of Egypt*, ch. 11.

B. C. 30.—Organized as a Roman province.—After the battle of Actium and the death of Cleopatra, Egypt was reduced by Octavius to the rank of a Roman province and the dynasty of the Ptolemies extinguished. But Octavius "had no intention of giving to the senate the rich domain which he tore from its native rulers. He would not sow in a foreign soil the seeds of independence which he was intent upon crushing nearer home. . . . In due time he persuaded the senate and people to establish it as a principle, that Egypt should never be placed under the administration of any man of superior rank to the equestrian, and that no senator should be allowed even

to visit it, without express permission from the supreme authority."—C. Merivale, *Hist. of the Romans*, ch. 29.

A. D. 616-628.—Conquest by Chosroes, the Persian.—The career of conquest pursued by Chosroes, the last Persian conqueror, extended even to Egypt, and beyond it. "Egypt itself, the only province which had been exempt since the time of Diocletian from foreign and domestic war, was again subdued by the successors of Cyrus. Pelusium, the key of that impervious country, was surprised by the cavalry of the Persians: they passed with impunity the innumerable channels of the Delta, and explored the long valley of the Nile from the pyramids of Memphis to the confines of Æthiopia. Alexandria might have been relieved by a naval force, but the archbishop and the præfect embarked for Cyprus; and Chosroes entered the second city of the empire, which still preserved a wealthy remnant of industry and commerce. His western trophy was erected, not on the walls of Carthage, but in the neighbourhood of Tripoli: the Greek colonies of Cyrene were finally extirpated." By the peace concluded in 628, after the death of Chosroes, all of his conquests were restored to the empire and the cities of Syria and Egypt evacuated by their Persian garrisons.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 46.—See PERSIA: A. D. 226-627.

A. D. 1250-1517.—The Mameluke Sultans.—The Mamelukes were a military body created by Saladin. "The word means slave (literally 'the possessed'), and . . . they were brought in youth from northern countries to serve in the South. Saladin himself was a Kurd, and long before his accession to power, Turkish and Kurdish mercenaries were employed by the Caliphs of Bagdad and Cairo, as the Pope employs Swiss. . . . Subsequently, however, Circassia became the country which most largely furnished this class of troops. Their apprenticeship was a long and laborious one: they were taught, first of all, to read the Koran and to write; then followed lance-exercise, during which time nobody was allowed to speak to them. At first they either resided in the castle, or were exercised living under tents; but after the time of Sultan Barkouk they were allowed to live in the town [Cairo], and the quarter now occupied by the Jews was at that time devoted to the Circassian Mamelukes. After this period they neglected their religious and warlike exercises, and became degenerate and corrupt. . . . The dynasty of Saladin . . . was of no duration, and ended in 618 A. H., or 1250

of the Christian era. Then began the so-called Bahrite Sultans, in consequence of the Mamelukes of the sultan Negm-ed-din having lodged in Rodah, the Island in the Nile (Bahr-en-Nil). The intriguer of the period was Sheger-ed-dur, the widow of the monarch, who married one of the Mamelukes, Moez-eddin-aibek-el-Turcomany, who became the first of these Bahrite Sultans, and was himself murdered in the Castle of Cairo through this woman. . . . Their subsequent history, until the conquest of Egypt by Sultan Selim in 1517, presents nothing but a series of acts of lust, murder and rapine. So rapidly did they expel each other from power, that the average reign of each did not exceed five or six years. . . . The 'fleeting purple' of the decline and fall of the Roman Empire is the spectacle which these Mameluke Dynasties constantly present. — A. A. Paton, *Hist. of the Egyptian Revolution*, v. 1, ch. 3-5.

A. D. 1803-1811.—The rise of Mohammad 'Aly (or Mehemet Ali) to power.—His treacherous destruction of the Mamelukes.—"It was during the French occupation that Mohammad 'Aly [or Mehemet Ali] came on the scene. He was born in 1768 at the Albanian port of Kaballa, and by the patronage of the governor was sent to Egypt in 1801 with the contingent of troops furnished by Kaballa to the Ottoman army then operating with the English against the French. He rapidly rose to the command of the Arnaut or Albanian section of the Turkish army, and soon found himself an important factor in the confused political position which followed the departure of the British army. The Memluk Beys had not been restored to their former posts as provincial governors, and were consequently ripe for revolt against the Porte; but their party was weakened by the rivalry of its two leaders, El-Elfy and El-Bardisy, who divided their followers into two hostile camps. On the other hand, the Turkish Pasha appointed by the Porte had not yet gained a firm grip of the country, and was perpetually apprehensive of a recall to Constantinople. Mohammad 'Aly at the head of his Albanians was an important ally for either side to secure, and he fully appreciated his position. He played off one party against the other, the Pasha against the Beys, so successfully, that he not only weakened both sides, but made the people of Cairo, who were disgusted with the anarchy of Memluk and Turk alike, his firm friends; and at last suffered him-

self, with becoming hesitation, to be persuaded by the entreaty of the populace to become [1805] their ruler, and thus stepped to the supreme power in the curious guise of the people's friend. A fearful time followed Mohammad 'Aly's election—for such it was—to the governorship of Egypt. The Turkish Pasha, Khurshid, held the citadel, and Mohammad 'Aly, energetically aided by the people of Cairo, laid siege to it. From the minaret of the mosque of Sultan Hasan, and from the heights of Mukattam, the besiegers poured their fire into the citadel, and Khurshid replied with an indiscriminate cannonade upon the city. The firing went on for weeks (pausing on Fridays), till a messenger arrived from Constantinople bringing the confirmation of the popular vote, in the form of a firman, appointing Mohammad 'Aly governor of Egypt. Khurshid shortly afterwards retired, and the soldiery amused themselves in the approved Turkish and (even worse) Albanian fashion by making havoc of the houses of the citizens. Mohammad 'Aly now possessed the title of Governor of Egypt, but beyond the walls of Cairo his authority was everywhere disputed by the Beys. . . . An attempt was made to ensnare certain of the Beys, who were encamped north of the metropolis. On the 17th of August, 1805, the dam of the canal of Cairo was to be cut, and some chiefs of Mohammad 'Aly's party wrote informing them that he would go forth early on that morning with most of his troops to witness the ceremony, inviting them to enter and seize the city, and, to deceive them, stipulating for a certain sum of money as a reward. The dam, however, was cut early in the preceding night, without any ceremony. On the following morning these Beys, with their Memlukes, a very numerous body, broke open the gate of the suburb El-Hosey-niyeh, and gained admittance into the city. . . . They marched along the principal street for some distance, with kettle-drums behind each company, and were received with apparent joy by the citizens. At the mosque called the Ashrafiyeh they separated, one party proceeding to the Azhar and the houses of certain sheykhs, and the other party continuing along the main street, and through the gate called Bab-Zuweyleh, where they turned up towards the citadel. Here they were fired on by some soldiers from the houses; and with this signal a terrible massacre commenced. Falling back towards their companions, they found the by-streets closed; and in that part of the main thoroughfare called Beyn-el-Kasreyn, they were suddenly placed between two fires. Thus shut up in a narrow street, some sought refuge in the collegiate mosque of the Barkukiyeh, while the remainder fought their way through their enemies, and escaped over the city wall with the loss of their horses. Two Memlukes had in the meantime succeeded, by great exertions, in giving the alarm to their comrades in the quarter of the Azhar, who escaped by the eastern gate called Bab-el-Ghureyyib. A horrible fate awaited those who had shut themselves up in the Barkukiyeh. Having begged for quarter and surrendered, they were immediately stripped nearly naked, and about fifty were slaughtered on the spot; and about the same number were dragged away. . . . The wretched captives were then chained and left in the court of the Pasha's house; and on the following morning the heads

of their comrades, who had perished the day before, were skinned and stuffed with straw before their eyes. One Bey and two other men paid their ransom, and were released; the rest, without exception, were tortured, and put to death in the course of the ensuing night. . . . The Beys were disheartened by this revolting butchery, and most of them retired to the upper country. Urged by England, or more probably by the promise of a bribe from El-Elfy, the Porte began a leisurely interference in favour of the Memlukes; but the failure of El-Elfy's treasury, and a handsome bribe from Mohammad 'Aly, soon changed the Sultan's views, and the Turkish fleet sailed away. . . . An attempt of the English Government to restore the Memlukes by the action of a force of 5,000 men under General Fraser ended in disaster and humiliation, and the citizens of Cairo had the satisfaction of seeing the heads of Englishmen exposed on stakes in the Ezbekiyeh. Mohammad 'Aly now adopted a more conciliatory policy towards the Memlukes, granted them land, and encouraged them to return to Cairo. The clemency was only assumed in order to prepare the way for the act of consummate treachery which finally uprooted the Memluk power. . . . Early in the year 1811, the preparations for an expedition against the Wahhabis in Arabia being complete, all the Memluk Beys then in Cairo were invited to the ceremony of investing Mohammad 'Aly's favourite son, Tusun, with a pelisse and the command of the army. As on the former occasion, the unfortunate Memlukes fell into the snare. On the 1st of March, Shahin Bey and the other chiefs (one only excepted) repaired with their retinues to the citadel, and were courteously received by the Pasha. Having taken coffee, they formed in procession, and, preceded and followed by the Pasha's troops, slowly descended the steep and narrow road leading to the great gate of the citadel; but as soon as the Memlukes arrived at the gate it was suddenly closed before them. The last of those who made their exit before the gate was shut were Albanians under Salih Kush. To those troops their chief now made known the Pasha's orders to massacre all the Memlukes within the citadel; therefore having returned by another way, they gained the summit of the walls and houses, that hem in the road in which the Memlukes were, and some stationed themselves upon the eminences of the rock through which that road is partly cut. Thus securely placed, they commenced a heavy fire on their defenceless victims, and immediately the troops who closed the procession, and who had the advantage of higher ground, followed their example. . . . 470 Memlukes entered the citadel, and of these very few, if any, escaped. One of these is said to have been a Bey. According to some, he leaped his horse from the ramparts, and alighted uninjured, though the horse was killed by the fall. Others say that he was prevented from joining his comrades, and discovered the treachery while waiting without the gate. He fled and made his way to Syria. This massacre was the signal for an indiscriminate slaughter of the Memlukes throughout Egypt, orders to this effect being transmitted to every governor; and in Cairo itself, the houses of the Beys were given over to the soldiery, who slaughtered all their adherents, treated their women in the most shameless manner, and sacked

their dwellings. . . . The last of his rivals being now destroyed, Mohammad 'Aly was free to organize the administration of the country, and to engage in expeditions abroad."—S. Lane-Poole, *Egypt*, ch. 8.

A. D. 1840-1869.—Mehemet Ali and his successors.—The khedives.—The opening of the Suez Canal.—"By the treaty of 1840 between the Porte and the European Powers, . . . his title to Egypt having been . . . affirmed . . . Mehemet Ali devoted himself during the next seven years to the social and material improvement of the country, with an aggregate of results which has fixed his place in history as the 'Peter the Great' of Egypt. Indeed, except some additions and further reforms made during the reign of his reputed grandson, Ismail Pasha, the whole administrative system, up till less than ten years ago, was, in the main, his work; and notwithstanding many admitted defects, it was at his death incomparably the most civilised and efficient of then existing Mussulman Governments. In 1848, this great satrap, then verging on his eightieth year, was attacked by a mental malady, induced, as it was said, by a potion administered in mistaken kindness by one of his own daughters, and the government was taken over by his adopted son, Ibrahim Pasha, the hero of Koniah and Nezib. He lingered till August 1849, but Ibrahim had already predeceased him; and Abbas, a son of the latter, succeeded to the viceregal throne. Though born and bred in Egypt, Abbas was a Turk of the worst type—ignorant, cowardly, sensual, fanatic, and opposed to reforms of every sort. Thus his feeble reign of less than six years was, in almost everything, a period of retrogression. On a night in July, 1854, he was strangled in his sleep by a couple of his own slaves,—acting, it was variously said, on a secret order from Constantinople, or at the behest of one of his wives. To Abbas succeeded Said, the third son of Mehemet Ali, an amiable and liberal-minded prince who retrieved much of the mischief done by his predecessor, but lacked the vigorous intelligence and force of character required to carry on the great work begun by his father. His reign will be chiefly memorable for the concession and commencement of the Suez Canal, the colossal work which, while benefiting the trade of the world, has cost so much to Egypt. Said died in January 1863, and was succeeded by his nephew Ismail Pasha, the second son of Ibrahim. As most of the leading incidents of this Prince's reign, as also the chief features of his character, are still fresh in the public memory, I need merely recall a few of the more salient of both. Amongst the former, history will give the first place to his creation of the huge public debt which forms the main element of a problem that still confronts Europe. But, for this the same impartial judge will at least equally blame the financial panderers who ministered to his ex-

travagance, with exorbitant profit to themselves, but at ruinous cost to Egypt. On the other hand, it is but historical justice to say that Ismail did much for the material progress of the country. He added more than 1,000 to the 200 miles of railway in existence at the death of Said. He greatly improved the irrigation, and so increased the cultivable area of the country; multiplied the primary schools, and encouraged native industries. For so much, at least, history will give him credit. As memorable, though less meritorious, were the magnificent fetes with which, in 1869, he opened the Suez Canal, the great work which England had so long opposed, but through which—as if by the irony of history—the first ship that passed flew the English flag, and to the present traffic of which we contribute more than eighty per cent. In personal character, Ismail was of exceptional intelligence, but cruel, crafty, and untrustworthy both in politics and in his private relations. . . . It may be mentioned that Ismail Pasha was the first of these Ottoman Viceroy who bore the title of 'Khedive,' which is a Perso-Arabic designation signifying rank a shade less than regal. This he obtained in 1867 by heavy bribes to the Sultan and his chief ministers, as he had the year before by similar means ousted his brother and uncle from the succession, and secured it for his own eldest son,—in virtue of which the latter now [1890] nominally reigns."—J. C. McCoan, *Egypt (National Life and Thought, lect. 18)*.—The same, *Egypt under Ismail, ch. 1-4*.

A. D. 1870-1883.—Conquest of the Soudan.

—Measures for the suppression of the slave-trade.—The government of General Gordon.

—Advent of the Mahdi and beginning of his revolt.—In 1870, Ismail Pasha "made an appeal for European assistance to strengthen him in completing the conquest of Central Africa. [Sir Samuel] Baker was accordingly placed in command of 1,200 men, supplied with cannon and steam-boats, and received the title of Governor-General of the provinces which he was commissioned to subdue. Having elected to make Gondokoro the seat of his government, he changed its name to Ismailia. He was not long in bringing the Bari to submission, and then, advancing southwards, he came to the districts of Dufilé and Fatiko, a healthy region endowed by nature with fertile valleys and irrigated by limpid streams, but for years past converted into a sort of hell upon earth by the slave-hunters who had made it their headquarters. From these pests Baker delivered the locality, and having by his tact and energy overcome the distrust of the native rulers, he established over their territory a certain number of small military settlements. . . . Baker returned to Europe flattering himself with the delusion that he had put an end to the scourge of slave dealing. It was true that various slave-dealers' dens on the Upper Nile had been destroyed, a number of outlaws had been shot, and a few thousand miserable slaves had been set at liberty; but beyond that nothing had been accomplished; no sooner had the liberator turned his back than the odious traffic recommenced with more vigour than before through the region south of Gondokoro. This, however, was only one of the slave-hunting districts, and by no means the worst. . . . Under European compulsion . . . the Khedive Ismail undertook to promote measures to put a stop to the scandal.

He entered into various conventions with England on the subject; and in order to convince the Powers of the sincerity of his intentions, he consented to put the equatorial provinces under the administration of an European officer, who should be commissioned to carry on the work of repression, conquest and organisation that had been commenced by Baker. His choice fell upon a man of exceptional ability, a brilliant officer trained at Woolwich, who had already gained high renown in China, not only for military talent, but for his adroitness and skill in negotiation and diplomacy. This was Colonel Gordon, familiarly known as 'Chinese Gordon,' who was now to add fresh lustre to his name in Egypt as Gordon Pasha. Gordon was appointed Governor-General of the Soudan in 1874. With him were associated Chaillé-Long, an American officer, who was chief of his staff; the German, Dr. Emin Effendi, medical officer to the expedition; Lieutenants Chippendall and Watson; Gessi and Kemp, engineers. . . . Thenceforward the territories, of which so little had hitherto been known, became the continual scene of military movements and scientific excursions. . . . The Soudan was so far conquered as to be held by about a dozen military outposts stationed along the Nile from Lake No to Lakes Albert and Ibrahim. . . . In 1876 Gordon went back to Cairo. Nevertheless, although he was wearied with the continual struggle of the past two years, worn down by the incessant labours of internal organisation and geographical investigations, disheartened, too, by the jealousies, rivalries, and intrigues of all around him, and by the ill feeling of the very people whom the Khedive's Government had sent to support him, he consented to return again to his post; this time with the title of Governor-General of the Soudan, Darfur, and the Equatorial Provinces. At the beginning of 1877 he took possession of the Government palace at Khartoum. . . . Egyptian authority, allied with European civilisation, appeared now at length to be taking some hold on the various districts, and the Cairo Government might begin to look forward to a time when it could reckon on some reward for its labours and sacrifices. The area of the new Egyptian Soudan had now become immense. Geographically, its centre included the entire valley of the Nile proper, from Berber to the great lakes; on the east were such portions of the valleys of the Blue Nile and Atbara as lay outside Abyssinia; and on the west were the districts watered by the Bahr-el-Ghazal, and the Bahr-el-Arab, right away to the confines of Wadai. . . . Unfortunately in 1879 Ismail Pasha was deposed, and, to the grievous loss of the Soudan, Gordon was recalled. As the immediate consequence, the country fell back into the hands of Turkish pashas; apathy, disorder, carelessness, and ill feeling reappeared at Khartoum, and the Arab slave-dealers, who had for a period been kept under by Baker, Gessi, and Gordon, came once more to the front. . . . It was Raouf Pasha who, in 1879, succeeded Gordon as Governor-General. He had three Europeans as his subordinates—Emin Bey, who before Gordon left, had been placed in charge of the province of the equator; Lupton Bey, an Englishman, who had followed Gessi as Governor of the Bahr-el-Ghazal; and Slatin Bey, an Austrian, in command of Darfur. Raouf had barely been two years at Khartoum when the Mahdi appeared on

the scene. Prompted either by personal ambition or by religious hatred, the idea of playing the part of 'Mahdi' had been acted upon by many an Arab fanatic [see MAHDI]. Such an idea, at an early age, had taken possession of a certain Soudanese of low birth, a native of Dongola, by name Mohammed Ahmed. Before openly aspiring to the rôle of the regenerator of Islam he had filled several subordinate engagements, notably one under Dr. Peney, the French surgeon-general in the Soudan, who died in 1861. Shortly afterwards he received admittance into the powerful order of the Ghelani dervishes, and then commenced his schemes for stirring up a revolution in defence of his creed. His proceedings did not fail to attract the attention of Gessi Pasha, who had him arrested at Shekka and imprisoned for five months. Under the government of Raouf he took up his abode upon the small island of Abba, on the Nile above Khartoum, where he gained a considerable notoriety by the austerity of his life and by the fervour of his devotions, thus gradually gaining a high reputation for sanctity. Not only offerings but followers streamed in from every quarter. He became rich as well as powerful. . . . Waiting till May 1881, he then assumed that a propitious time had arrived for the realisation of his plans, and accordingly had himself publicly proclaimed as 'Mahdi,' inviting every fakir and every religious leader of Islam to come and join him at Abba. . . . Convinced that it was impolitic to tolerate any longer the revolutionary intrigues of such an adventurer at the very gates of Khartoum, Raouf Pasha resolved to rid the country of Mohammed and to send him to Cairo for trial. An expedition was accordingly despatched to the island of Abba, but unfortunately the means employed were inadequate to the task. Only a small body of black soldiers were sent to arrest the agitator in his quarters, and they, inspired no doubt by a vague and superstitious dread of a man who represented himself as the messenger of Allah, wavered and acted with indecision. Before their officers could rally them to energy, the Mahdi, with a fierce train of followers, knife in hand, rushed upon them, and killing many, put the rest to flight; then, seeing that a renewed assault was likely to be made, he withdrew the insurgent band into a retreat of safety amongst the mountains of Southern Kordofan. Henceforth revolt was openly declared. Such was the condition of things in August 1881. Chase was given, but every effort to secure the person of the pretended prophet was baffled. A further attempt was made to arrest him by the Mudir of Fashoda with 1,500 men, only to be attended with a still more melancholy result. After a desperate struggle the Mudir lay stretched upon the ground, his soldiers murdered all around him. One single officer, with a few straggling cavalry, escaped the massacre, and returned to report the fatal news. The reverse caused an absolute panic in Khartoum, an intense excitement spreading throughout the Soudan. . . . Meantime the Mahdi's prestige was ever on the increase, and he soon felt sufficiently strong to assume the offensive. His troops overran Kordofan and Sennar, advancing on the one hand to the town of Sennar, which they set on fire, and on the other to El-Obeid, which they placed in a state of siege. In the following July a fresh and more powerful expedition, this time numbering 6,000 men, under the command of Yussuf Pasha, left Fashoda and

made towards the Mahdi's headquarters. It met with no better fate than the expeditions that had gone before. . . . And then it was that the English Government, discerning danger for Egypt in this insurrection of Islam, set to work to act for the Khedive. It told off 11,000 men, and placed them under the command of Hicks Pasha, an officer in the Egyptian service who had made the Abyssinian campaign. At the end of December 1882 this expedition embarked at Suez for Suakin, crossed the desert, reached the Nile at Berber, and after much endurance on the way, arrived at Khartoum. Before this, El-Obeid had fallen into the Mahdi's power, and there he had taken up his headquarters. Some trifling advantages were gained by Hicks, but having entered Kordofan with the design of retaking El-Obeid, he was, on the 5th of November 1883, hemmed in amongst the Kasgil passes, and after three days' heroic fighting, his army of about 10,000 men was overpowered by a force five or six times their superior in numbers, and completely exterminated. Hicks Pasha himself, his European staff, and many Egyptian officers of high rank, were among the dead, and forty-two guns fell into the hands of the enemy. Again, not a man was left to carry the fatal tidings to Khartoum. Rebellion continued to spread. After being agitated for months, the population of the Eastern Soudan also made a rising. Osman Digna, the foremost of the Mahdi's lieutenants, occupied the road between Suakin and Berber, and surrounded Sinkat and Tokar; then, having destroyed, one after another, two Egyptian columns that had been despatched for the relief of these towns, he finally cut off the communication between Khartoum and the Red Sea. The tide of insurrection by this time had risen so high that it threatened not only to overthrow the Khedive's authority in the Soudan, but to become the source of serious peril to Egypt itself."—A. J. Wauters, *Stanley's Emin Pasha Expedition*, ch. 1-2.

ALSO IN: Maj. R. F. Wingate, *Mahdism and the Egyptian Sudan*, bk. 1-4.—Col. Sir. W. F. Butler, *Charles George Gordon*, ch. 5-6.—A. E. Hake, *The Story of Chinese Gordon*, ch. 10-15.

A. D. 1875-1882.—**Bankruptcy of the state.**—**English and French control of finances.**—**Native hostility to the foreigners.**—**Rebellion, led by Arabi.**—**English bombardment of Alexandria.**—"The facilities given by foreign money-lenders encouraged extravagance and ostentation on the part of the sovereign and the ruling classes, while mismanagement and corrupt practices were common among officials, so that the public debt rose in 1875 to ninety-one millions, and in January, 1881, to ninety-eight millions. . . . The European capitalists obtained for their money nominally six to nine per cent., but really not less than eight to ten per cent., as the bonds were issued at low rates. . . . The interest on these borrowed millions was punctually paid up to the end of 1875, when the Khedive found that he could not satisfy his creditors, and the British government interfered in his favour. Mr. Cave was sent to examine into Egyptian finances, and he reported that loans at twelve and thirteen per cent. were being agreed to and renewed at twenty-five per cent., and that some measure of consolidation was necessary. The two western Powers now took the matter in hand, but they thereby recognized the whole of these usurious

demands. The debt, although under their control, and therefore secured, was not reduced by the amount already paid in premiums for risk. Nor was the rate of interest diminished to something more nearly approaching the rate payable on English consols, which was three per cent. A tribunal under the jurisdiction of united European and native judges was also established in Egypt to decide complaints of foreigners against natives, and vice versa. In May, 1876, this tribunal gave judgment that the income of the Khedive Ismail, from his private landed property, could be appropriated to pay the creditors of the state, and an execution was put into the Viceregal palace, Er Ramlah, near Alexandria. The Khedive pronounced the judgment invalid, and the tribunal ceased to act. Two commissioners were now again sent to report on Egyptian finances—M. Joubert, the director of the Paris Bank, for France, and Mr. Goschen, a former minister, for England. These gentlemen proposed to hand over the control of the finances to two Europeans, depriving the state of all independence and governing power. The Khedive, in order to resist these demands, convoked a sort of Parliament in order to make an appeal to the people. From this Parliament was afterwards developed the Assembly of Notables, and the National party, now so often spoken of. In 1877 a European commission of control over Egyptian finance was named. . . . Nubar Pasha was made Prime minister in 1878; the control of the finances was entrusted to Mr. Wilson, an Englishman; and later, the French controller, M. de Blignières, entered the Cabinet. Better order was thus restored to the finances. Rothschild's new loan of eight and a half millions was issued at seventy-three, and therefore brought in from six to eight per cent. nett. . . . But to be able to pay the creditors their full interest, economy had to be introduced into the national expenditure. To do this, clumsy arrangements were made, and the injustice shown in carrying them out embittered many classes of the population, and laid the foundations of a fanatical hatred of race against race. . . . In consequence of all this, the majority of the notables, many ulemas, officers, and higher officials among the Egyptians, formed themselves into a National party, with the object of resisting the oppressive government of the foreigner. They were joined by the great mass of the discharged soldiers and subordinate officials, not to mention many others. At the end of February, 1879, a revolt broke out in Cairo. Nubar, hated by the National party, was dismissed by the Khedive Ismail, who installed his son Tewfik as Prime minister. In consequence of this, the coupons due in April were not paid till the beginning of May, and the western Powers demanded the reinstatement of Nubar. That Tewfik on this occasion retired and sided with the foreigners is the chief cause of his present [1882] unpopularity in Egypt. Ismail, however, now dismissed Wilson and De Blignières, and a Cabinet was formed, consisting chiefly of native Egyptians, with Sherif Pasha as Prime minister. Sherif now raised for the first time the cry of which we have since heard so much, and which was inscribed by Arabi on his banners, 'Egypt for the Egyptians.' The western Powers retorted by a menacing naval demonstration, and demanded of the Sultan the deposition of the Khedive. In June, 1879, this

demand was agreed to. Ismail went into exile, and his place was filled by Mahomed Tewfik. . . . The new Khedive, with apathetic weakness, yielded the reconstruction of his ministry and the organization of his finances to the western Powers. Mr. Baring and M. de Blignières, as commissioners of the control, aided by officials named by Rothschild to watch over his private interests, now ruled the land. They devoted forty-five millions (about sixteen shillings per head on the entire population) to the payment of interest. The people were embittered by the distrust shown towards them, and the further reduction of the army from fifty to fifteen thousand men threw a large number out of employment. . . . Many acts of military insubordination occurred, and at last, on the 8th of November, 1881, the great military revolt broke out in Cairo. . . . Ahmed Arabi, colonel of the 4th regiment, now first came into public notice. Several regiments, headed by their officers, openly rebelled against the orders of the Khedive, who was compelled to recall the nationalist, Sherif Pasha, and to refer the further demands of the rebels for the increase of the army, and for a constitution, to the Sultan. Sherif Pasha, however, did not long enjoy the confidence of the National Egyptian party, at whose head Arabi now stood, winning every day more reputation and influence. The army, in which he permitted great laxity of discipline, was entirely devoted to him. . . . A pretended plot of Circassian officers against his life he dexterously used to increase his popularity. . . . Twenty-six officers were condemned to death by court-martial, but the Khedive, at the instance of the western Powers, commuted the sentence, and they were banished to Constantinople. This leniency was stigmatized by the National party as treachery to the country, and the Chamber of Notables retorted by naming Arabi commander-in-chief of the army and Prime minister without asking the consent of the Khedive. The Chamber soon afterwards came into conflict with the foreign comptrollers. . . . This ended in De Blignières resigning his post, and in the May of the present year (1882) the consuls of the European Powers declared that a fleet of English and French ironclads would appear before Alexandria, to demand the disbanding of the army and the punishment of its leaders. The threat was realized, and, in spite of protests from the Sultan, a fleet of English and French ironclads entered the harbour of Alexandria. The Khedive, at the advice of his ministers and the chiefs of the National party, appealed to the Sultan. . . . The popular hatred of foreigners now became more and more apparent, and began to assume threatening dimensions. . . . On the 30th of May, Arabi announced that a despatch from the Sultan had reached him, promising the deposition of Tewfik in favour of his uncle Halim Pasha. . . . On the 3rd of June, Dervish Pasha, a man of energy notwithstanding his years, had sailed from Constantinople. . . . His object was to pacify Egypt and to reconcile Tewfik and Arabi Pasha. . . . Since the publication of the despatch purporting to proclaim Halim Pasha as Khedive, Arabi had done nothing towards dethroning the actual ruler. But on the 2nd of June he began to strengthen the fortifications of Alexandria with earthworks. . . . The British admiral protested, and the

Sultan, on the remonstrances of British diplomacy, forbade the continuation of the works. . . . Serious disturbances took place in Alexandria on the 11th. The native rabble invaded the European quarter, plundered the shops, and slew many foreigners. . . . Though the disturbances were not renewed, a general emigration of foreigners was the result. . . . On the 22nd a commission, consisting of nine natives and nine Europeans . . . began to try the ringleaders of the riot. . . . But events were hurrying on towards war. The works at Alexandria were recommenced, and the fortifications armed with heavy guns. The English admiral received information that the entrance to the harbour would be blocked by sunken storeships, and this, he declared, would be an act of open war. A complete scheme for the destruction of the Suez canal was also discovered. . . . The English, on their side, now began to make hostile demonstrations; and Arabi, while repudiating warlike intentions, declared himself ready for resistance. . . . On the 27th the English vice-consul advised his fellow-countrymen to leave Alexandria, and on the 3rd of July, according to the 'Times,' the arrangements for war were complete. . . . Finally, as a reconnaissance on the 9th showed that the forts were still being strengthened, he [the English admiral] informed the governor of Alexandria, Zulficar Pasha, that unless the forts had been previously evacuated and surrendered to the English, he intended to commence the bombardment at four the next morning. . . . As the French government were unable to take part in any active measures (a grant for that purpose having been refused by the National Assembly), the greater part of their fleet, under Admiral Conrad, left Alexandria for Port Said. The ironclads of other nations, more than fifty in number, anchored outside the harbour of Alexandria. . . . On the evening of the 10th of July . . . and at daybreak on the 11th, the . . . ironclads took up the positions assigned to them. There was a gentle breeze from the east, and the weather was clear. At 6.30 a. m. all the ships were cleared for action. At seven the admiral signalled to the Alexandria to fire a shell into Fort Ada. . . . The first shot fired from the Alexandria was immediately replied to by the Egyptians; whereupon the ships of the whole fleet and the Egyptian forts and batteries opened fire, and the engagement became general. . . . At 8.30 Fort Marsa-el-Kanat was blown up by shells from the Invincible and Monarch, and by nine o'clock the Téméraire, Monarch, and Penelope had silenced most of the guns in Fort Meks, although four defied every effort from their protected situation. By 11.45 Forts Marabout and Adjemi had ceased firing, and a landing party of seamen and marines was despatched, under cover of the Bittern's guns, to spike and blow up the guns in the forts. At 1.30 a shell from the Superb burst in the chief powder magazine of Fort Ada and blew it up. By four o'clock all the guns of Fort Pharos, and half an hour later those of Fort Meks, were disabled, and at 5.30 the admiral ordered the firing to cease. The ships were repeatedly struck and sustained some damage. . . . The English casualties were five killed and twenty-eight wounded, a comparatively small loss. The Egyptian loss is not known. . . . At 1 p. m. on the 12th of July, the white flag was hoisted by the Egyptians. Admiral Seymour demanded, as a prelimi-

nary measure, the surrender of the forts commanding the entrance to the harbour, and the negotiations on this point were fruitlessly protracted for some hours. As night approached the city was seen to be on fire in many places, and the flames were spreading in all directions. The English now became aware that the white flag had merely been used as means to gain time for a hasty evacuation of Alexandria by Arabi and his army. Sailors and marines were now landed, and ships of other nations sent detachments on shore to protect their countrymen. But it was too late; Bedouins, convicts, and ill-disciplined soldiers had plundered and burnt the European quarter, killed many foreigners, and a Reuter's telegram of the 14th said, 'Alexandria is completely destroyed.'"—H. Vogt, *The Egyptian War of 1882*, pp. 2-32.

A. D. 1882-1883.—The massacre and destruction in Alexandria.—Declared rebellion of Arabi.—Its suppression by the English.—Banishment of Arabi.—English occupation.—The city of Alexandria had become "such a scene of pillage, massacre, and wanton destruction as to make the world shudder. It was the old tale of horrors. Houses were plundered and burned; the European quarter, including the stately buildings surrounding the Great Square of Mehemet Ali, was sacked and left a heap of smoldering ruins; and more than two thousand Europeans, for the most part Levantines, were massacred with all the cruelty of oriental fanaticism. This was on the afternoon of the 12th. It was the second massacre that had occurred under the very eyes of the British fleet. The admiral's failure to prevent it has been called unfortunate by some and criminal by others. It seems to have been wholly without excuse. . . . The blue-jackets were landed on the 13th, and cleared the way before them with a Gatling gun. The next day, more ships having arrived, a sufficient force was landed to take possession of the entire city. The khedive was escorted back to Ras-el-Tin from Ramleh, and given a strong guard. Summary justice was dealt out to all hostile Arabs who had been captured in the city. In short, English intervention was followed by English occupation. The bombardment of Alexandria had defined clearly the respective positions of Arabi and the khedive toward Egypt and the Egyptian people. . . . The khedive was not only weak in the eyes of his people, but he was regarded as the tool of England. . . . From the moment the first shot was fired upon Alexandria, Arabi was the real ruler of the people. . . . The conference at Constantinople was stirred by the news of the bombardment of Alexandria. It presented a note to the Porte, July 15, requesting the dispatch of Turkish troops to restore the status quo in Egypt. But the sultan had no idea of taking the part of the Christian in what all Islam regarded as a contest between the Moslem and the unbeliever. . . . In Egypt, the khedive had been prevailed upon, after some demur, to proclaim Arabi a rebel and discharge him from his cabinet. Arabi had issued a counter-proclamation, on the same day, declaring Tewfik a traitor to his people

and his religion. Having received the news of the khedive's proclamation, Lord Dufferin, the British ambassador at Constantinople, announced to the conference that England was about to send an expedition to Egypt to suppress the rebellion and to restore the authority of the khedive. Thereupon the sultan declared that he had decided to send a Turkish expedition. Lord Dufferin feigned to accept the sultan's co-operation, but demanded that the Porte, as a preliminary step, should declare Arabi a rebel. Again the sultan was confronted with the danger of incurring the wrath of the Moslem world. He could not declare Arabi a rebel. . . . In his desperation he sent a force of 3,000 men to Suda bay with orders to hold themselves in readiness to enter Egypt at a moment's notice. . . . In the meantime, however, the English expedition had arrived in Egypt and was proceeding to crush the rebellion, regardless of the diplomatic delays and bickerings at Constantinople. . . . It was not until the 15th of August that Sir Garnet Wolseley arrived with his force in Egypt. The English at that time held only two points, Alexandria and Suez, while the entire Egyptian interior, as well as Port Said and Ismailia, were held by Arabi, whose force, it was estimated, now amounted to about 70,000 men, of whom at least 50,000 were regulars. The objective point of General Wolseley's expedition to crush Arabi was, of course, the city of Cairo. There were two ways of approaching that city, one from Alexandria, through the Delta, and the other from the Suez canal. There were many objections to the former route. . . . The Suez canal was supposed to be neutral water. . . . But England felt no obligation to recognize any neutrality, . . . acting upon the principle, which is doubtless sound, that 'the neutrality of any canal joining the waters of the Atlantic and Pacific oceans will be maintained, if at all, by the nation which can place and keep the strongest ships at each extremity.' In other words, General Wolseley decided to enter Cairo by way of the Suez canal and Ismailia. But he kept his plan a profound secret. Admiral Seymour alone knew his purpose. . . . On the 19th, the transports moved eastward from Alexandria, as if to attack Abukir; but under the cover of darkness that night, they were escorted on to Port Said, where they learned that the entire canal, owing to the preconcerted action of Admiral Seymour, was in the hands of the British. On the 21st, the troops met Sir Henry McPherson's Indian contingent at Ismailia. Two days were now consumed in rest and preparation. The Egyptians cut off the water supply, which came from the Delta by the Sweet Water canal, by damming the canal. A sortie to secure possession of the dam was therefore deemed necessary, and was successfully made on the 24th. Further advances were made, and on the 26th, Kassassin, a station of some importance on the canal and railway, was occupied. Here the British force was obliged to delay for two weeks, while organizing a hospital and a transport service. This gave Arabi opportunity to concentrate his forces at Zagazig and Tel-el-Kebir. But he knew it was for his interest to strike at once before the British transports could come up with the advance. He therefore made two attempts, one on August 28, and the other on September 9, to regain the position lost at Kas-

sassin. But he failed in both, though inflicting some loss upon his opponents. On the 12th of September preparations were made by General Wolseley for a decisive battle. He had become convinced from daily reconnaissance and from the view obtained in the engagement of September 9, that the fortifications at Tel-el-Kebir were both extensive and formidable. . . . It was therefore decided to make the approach under cover of darkness. . . . At 1.30 on the morning of the 13th General Wolseley gave the order for the advance, his force consisting of about 11,000 infantry, 2,000 cavalymen, and sixty field-guns. They had only the stars to guide them, but so accurately was the movement conducted that the leading brigades of each division reached the enemy's outposts within two minutes of each other. 'The enemy (says General Wolseley) were completely surprised, and it was not until one or two of their advanced sentries fired their rifles that they realized our close proximity to their works.' . . . The intrenchments were not carried without a severe struggle. The Egyptians fought with a desperate courage and hundreds of them were bayoneted at their posts. . . . But what could the rank and file accomplish when 'each officer knew that he would run, but hoped his neighbor would stay.' At the first shot Arabi and his second in command took horse and galloped to Belbeis, where they caught a train for Cairo. Most of the other officers, as the reports of killed and wounded show, did the same. The Egyptians fired their first shot at 4.55 A. M., and at 6.45 the English had possession of Arabi's headquarters and the canal bridge. The British loss was 57 killed, 380 wounded, and 23 missing. The Egyptian army left about 2,000 dead in the fortifications. . . . A proof of the completeness of the success was the entire dissipation of Arabi's army. Groups of soldiers, it is true, were scattered to different parts of Egypt; but the army organization was completely broken up with the battle of Tel-el-Kebir. . . . Major-General Lowe was ordered to push on with all possible speed to Cairo. . . . General Lowe [reached] the great barracks of Abbassieh, just outside of Cairo, at 4.45 P. M., on the 14th instant. The cavalry marched sixty-five miles in these two days. . . . A message was sent to Arabi Pasha through the prefect of the city, calling upon him to surrender forthwith, which he did unconditionally.' . . . Before leaving England, Wolseley had predicted that he would enter Cairo on the 16th of September; but with still a day to spare the feat was accomplished, and Arabi's rebellion was completely crushed. England now stood alone. Victory had been won without the aid of France or the intervention of Turkey. In Constantinople negotiations regarding Turkish expeditions were still pending when Lord Dufferin received the news of Wolseley's success, and announced to the Porte that there was now no need of a Turkish force in Egypt, as the war was ended. France at once prepared to resume her share in the control; but England, having borne the sole burden of the war, did not propose now to share the influence her success had given her. And it was for the interest of Egypt that she should not. . . . England's first duty, after quiet was assured, was to send away all the British troops except a force of about 11,000 men, which it was deemed advisable to retain in Egypt until

the khedive's authority was placed on a safe footing throughout the land. . . . What should be done with Arabi was the question of paramount interest, when once the khedive's authority was re-established and recognized. Tewfik and his ministers, if left to themselves, would unquestionably have taken his life. . . . But England was determined that Arabi should have a fair trial. . . . It was decided that the rebel leaders should appear before a military tribunal, and they were given English counsel to plead their cause. . . . The trial was a farce. Everything was 'cut and dried' beforehand. It was arranged that Arabi was to plead guilty to rebellion, that he was forthwith to be condemned to death by the court, and that the khedive was immediately to commute the sentence to perpetual exile. In fact, the necessary papers were drawn up and signed before the court met for Arabi's trial on December 3. . . . On the 26th of December Arabi and his six companions . . . upon whom the same sentence had been passed, left Cairo for the Island of Ceylon, there to spend their life of perpetual exile. . . . Lord Dufferin . . . had been sent from Constantinople to Cairo, early in November, with the special mission of bringing order out of governmental chaos. In two months he had prepared a scheme of legislative reorganization. This was, however, somewhat altered; so that it was not until May, 1883, that the plan in its improved form was accepted by the decree of the khedive. The new constitution provided for three classes of assemblies: the 'Legislative Council,' the 'General Assembly,' and the 'Provincial Councils,' of which there were to be fourteen, one for each province. . . . Every Egyptian man, over twenty years of age, was to vote (by ballot) for an 'elector-delegate' from the village in the neighborhood of which he lived, and the 'electors-delegate' from all the villages in a province were to form the constituency that should elect the provincial council. . . . The scheme for reorganization was carried forward to the extent of electing the 'electors-delegate' in September; but by that time Egypt was again in a state of such disquietude that the British advisers of the khedive considered it unwise to put the new institutions into operation. In place of legislative council and general assembly, the khedive appointed a council of state, consisting of eleven Egyptians, two Armenians, and ten Europeans. The reforms were set aside for the time being in view of impending troubles and dangers in the Sudan."—J. E. Bowen, *The Conflict of East and West in Egypt*, ch. 5-6.

A. D. 1884-1885.—General Gordon's Mission to Khartoum.—The town beleaguered by the Mahdists.—English rescue expedition.—The energy that was too late.—"The abandonment of the Sudan being decided upon, the British Government confided to General Gordon the task of extricating the Egyptian garrisons scattered throughout the country. . . . Gordon's original instructions were dated the 18th January, 1884. He was to proceed at once to Egypt, to report on the military situation in the Sudan, and on the measures which it might be advisable to take for the security of the Egyptian garrisons and for the safety of the European population in Khar-

toum. . . . He was to be accompanied by Colonel Stewart. . . . Gordon's final instructions were given him by the Egyptian Government in a firman appointing him Governor-General. . . . Gordon arrived at Khartoum on the 18th February. . . . While Gordon was sending almost daily expressions of his view as to the only way of carrying out the policy of eventual evacuation, it was also becoming clear to him that he would very soon be cut off from the rest of Egypt. His first remark on this subject was to express 'the conviction that I shall be caught in Khartoum'; and he wrote,—'Even if I was mean enough to escape I have no power to do so.' The accuracy of this forecast was speedily demonstrated. Within a few days communications with Khartoum were interrupted, and although subsequently restored for a time, the rising of the riparian tribes rendered the receipt and despatch of messages exceedingly uncertain. . . . Long before the summer of 1884, it was evident that the position of Gordon at Khartoum had become so critical, that if he were to be rescued at all, it could only be by the despatch of a British force. . . . Early in May, war preparations were commenced in England, and on the 10th of the month the military authorities in Cairo received instructions to prepare for the despatch in October of an expedition for the relief of the Soudanese capital. 12,000 camels were ordered to be purchased and held in readiness for a forward march in the autumn. On the 16th May a half-battalion of English troops was moved up the Nile to Wady Halfa. A few weeks later some other positions on the Nile were occupied by portions of the Army of Occupation. Naval officers were also sent up the river to examine and report upon the cataracts and other impediments to navigation. Still it was not till the 5th August that Mr. Gladstone rose in the House of Commons to move a vote of credit of £300,000 to enable the Government to undertake operations for the relief of Gordon. . . . It was agreed that there were but two routes by which Khartoum could be approached by an expedition. One by way of the Nile, and the other via Souakim and Berber. . . . The Nile route having been decided on, preparations on a large scale were begun. . . . It was at first arranged that not more than 5,000 men should form the Expedition, but later on the number was raised to 7,000. . . . The instructions given to Lord Wolseley stated that the primary object of the Expedition was to bring away Gordon and Stewart from Khartoum; and when that purpose should be effected, no further offensive operations of any kind were to be undertaken."—C. Royle, *The Egyptian Campaigns*, 1882-1885, v. 2, ch. 12-18.—"First, it was said that our troops would be before the gates of Khartoum on January 14th; next it was the middle of February; and then the time stretched out to the middle of March. . . . Lord Wolseley offered a hundred pounds to the regiment covering the distance from Sarra to Debbeh most expeditiously and with least damage to boats. . . . He also dispatched Sir Herbert Stewart on the immortal march to Gakdul. Stewart's force, composed principally of the Mounted Infantry and Camel Corps, and led by a troop of the 19th Hussars, acting as scouts—numbering about 1,100 in all—set out from Korti on December 30th. Its destination was about 100 miles from headquarters, and about 80 from the Nile at

Shendy. The enterprise, difficult and desperate as it was, was achieved with perfect success. . . . On the 17th January Sir Herbert Stewart engaged the enemy on the road to Metemneh, and after defeating some 10,000 Arabs—collected from Berber, Metemneh, and Omdurman—pushed forward to the Abu Klea Wells. His tactics were much the same as those of General Graham at Elteb, and those of the Mahdi's men—of attacking when thirst and fatigue had well-nigh prostrated the force—were at all points similar to those adopted against Hicks. Our losses were 65 non-commissioned officers and men killed and 85 wounded, with 9 officers killed—among them Colonel Burnaby—and 9 wounded. Stewart at once pushed on for Metemneh and the Nile. He left the Wells on the 18th Jan. to occupy Metemneh, if possible, but, failing that, to make for the Nile and entrench himself. After a night's march, some five miles south of Metemneh, the column found itself in presence of an enemy said to have been about 18,000 strong. Stewart halted and formed a zareba under a deadly fire. He himself was mortally hurt in the groin, and Mr. Cameron, of the Standard, and Mr. Herbert, of the Morning Post, were killed. The zareba completed, the column advanced in square, and the Arabs, profiting by Abu Klea, moved forward in echelon, apparently with the purpose of charging. At thirty yards or so they were brought to bay, so terrific was the fire from the square, and so splendidly served was Norton's artillery. For two hours the battle raged; and then the Arabs, 'mown

down in heaps,' gave way. Meantime Sir Charles Wilson had made a dash for the Nile, where he found steamers and reinforcements from Gordon, and the laconic message, 'All right at Khartoum. Can hold out for years.' . . . In the joy at the good news, none had stopped to consider the true meaning of the message, 'All right. Can hold out for years,' for none was aware that nearly two months before Gordon had said he had just provisions enough for 40 days, and that what he really meant was that he had come to his last biscuit. The message—which was written for the enemy—was dated Dec. 29, and Sir Charles Wilson would reach Khartoum on Jan. 28, just a month after its despatch. . . . The public, carefully kept in ignorance . . . and hopeful beyond their wont, were simply stupefied to hear, on Feb. 5, that Khartoum was in the hands of the Mahdi and Gordon captured or dead."—A. E. Hake, *The Story of Chinese Gordon*, v. 2, ch. 10.

ELAM.—"Genesis calls a tribe dwelling on the Lower Tigris, between the river and the mountains of Iran, the Elamites, the oldest son of Shem. Among the Greeks the land of the Elamites was known as Kissia [Cissia], and afterwards as Susiana, from the name of the capital. It was also called Elymais."—M. Duncker, *Hist. of Antiquity*, bk. 2, ch. 1.—About 2300 B. C. Chaldea, or Babylonia, was overwhelmed by an Elamite invasion—an invasion recorded by king Assurbanipal, and which is stated to have laid waste the land of Accad and desecrated its temples. "Nor was this a passing inroad or raid of booty-seeking mountaineers. It was a real conquest. Khudur-Nankhundi and his successors remained in Southern Chaldea. . . . This is the first time we meet authentic monumental records

of a country which was destined through the next sixteen centuries to be in continual contact, mostly hostile, with both Babylonia and her northern rival, Assyria, until its final annihilation by the latter [B. C. 649, under Assurbanipal, the Sardanapulus of the Greeks, who reduced the whole country to a wilderness]. Its capital was Shushan (afterwards pronounced by foreigners Susa), and its own original name Shushinak. Its people were of Turanian stock, its language was nearly akin to that of Shumir and Accad. . . . Elam, the name under which the country is best known, both from the Bible and later monuments, is a Turanian word, which means, like 'Accad,' 'Highlands.' . . . One of Khudur-Nankhundi's next successors, Khudur-Lagamar, was not content with the addition of Chaldea to his kingdom of Elam. He had the ambition of a born conqueror, and the generalship of one. The Chap. xiv. of Genesis—which calls him Chedorlaomer—is the only document we have descriptive of this king's warlike career, and a very striking picture it gives of it. . . . Khudur-Lagamar . . . lived, according to the most probable calculations, about 2200 B. C."—Z. A. Ragozin, *Story of Chaldea*, ch. 4.—It is among the discoveries of recent times, that Cyrus the Great was originally king of Elam, and acquired Persia by conquest.—See PERSIA: B. C. 549-521.—See, also, BABYLONIA.

EL DORADO, The quest of.—"When the Spaniards had conquered and pillaged the civilized empires on the table lands of Mexico, Bogota, and Peru, they began to look round for new scenes of conquest, new sources of wealth; the wildest rumours were received as facts, and the forests and savannas, extending for thousands of square miles to the eastward of the cordilleras of the Andes, were covered, in imagination, with populous kingdoms, and cities filled with gold. The story of El Dorado, of a priest or king smeared with oil and then coated with gold dust, probably originated in a custom which prevailed among the civilized Indians of the plateau of Bogota; but El Dorado was placed, by the credulous adventurers, in a golden city amidst the impenetrable forests of the centre of South America, and, as search after search failed, his position was moved further and further to the eastward, in the direction of Guiana. El Dorado, the phantom god of gold and silver, appeared in many forms. . . . The settlers at Quito and in Northern Peru talked of the golden empire of the Omaguas, while those in Cuzco and Charcas dreamt of the wealthy cities of Paytiti and Enim, on the banks of a lake far away to the eastward of the Andes. These romantic fables, so firmly believed in those old days led to the exploration of vast tracts of country, by the fearless adventurers of the sixteenth century, portions of which have never been traversed since, even to this day. The most famous searches after El Dorado were undertaken from the coast of Venezuela, and the most daring leaders of these wild adventures were German knights."—C. R. Markham, *Introd. to Simon's Account of the Expedition of Ursua and Aguirre* (Hakluyt Soc. 1861).—"There were, along the whole coast of the Spanish Main, rumours of an inland country which abounded with gold. These rumours undoubtedly related to the kingdoms of Bogota and Tunja, now the Nuevo Reyno de Granada. Belalcazar, who was in quest of this country from Quito, Federman, who came from Venezuela, and Gonzalo Ximenez de Quesada, who sought it by way of the River Magdalena, and who effected its conquest, met here. But in these countries also there were rumours of a rich land at a distance; similar accounts prevailed in Peru; in Peru they related to the Nuevo Reyno, there they related to Peru; and thus adventurers from both sides were allured to continue the pursuit after the game was taken. An imaginary kingdom was soon shaped out as the object of their quest, and stories concerning it were not more easily invented than believed. It was said that a younger brother of Atabalipa fled, after the destruction of the Incas, took with him the main part of their treasures, and founded a greater empire than that of which his family had been deprived. Sometimes the imaginary Emperor was called the Great Paytite, sometimes the Great Moxo, sometimes the Enim or Great Paru. An impostor at Lima affirmed that he had been in his capital, the city of Manoa, where not fewer than 3,000 workmen were employed in the silversmiths' street; he even produced a map of the country, in which he had marked a hill of gold, another of silver, and a third of salt. . . . This imaginary kingdom obtained the name of El Dorado from the fashion of its Lord, which has the merit of being in savage costume. His body was anointed every

morning with a certain fragrant gum of great price, and gold dust was then blown upon him, through a tube, till he was covered with it: the whole was washed off at night. This the barbarian thought a more magnificent and costly attire than could be afforded by any other potentate in the world, and hence the Spaniards called him El Dorado, or the Gilded One. A history of all the expeditions which were undertaken for the conquest of his kingdom would form a volume not less interesting than extraordinary."—R. Southey, *Hist. of Brazil*, v. 1, ch. 12.—The most tragical and thrilling of the stories of the seekers after El Dorado is that which Mr. Markham introduces in the quotation above, and which Southey has told with full details in *The Expedition of Ursua; and the Crimes of Aguirre*. The most famous of the expeditions were those in which Sir Walter Raleigh engaged, and two of which he personally led—in 1595, and in 1617-18. Released from his long imprisonment in the Tower to undertake the latter, he returned from it, broken and shamed, to be sent to the scaffold as a victim sacrificed to the malignant resentment of Spain. How far Raleigh shared in the delusion of his age respecting El Dorado, and how far he made use of it merely to promote a great scheme for the "expansion of England," are questions that will probably remain forever in dispute.—Sir W. Raleigh, *Discoverie of the Large, Rich and Beautiful Empire of Guiana* (Hakluyt Soc. 1848).

ELECTORAL COMMISSION, The. See UNITED STATES OF AM.: A. D. 1876-1877.

ELECTORAL COUNT ACT. See UNITED STATES OF AM.: A. D. 1887.

ELECTORS, Presidential, of the United States of Am.—"There was no question which perplexed the Federal Convention [of 1787] more than the question as to the best method of electing the president. . . . At one time the Convention decided to have the president elected by Congress, but there was a grave objection to this; it would be likely to destroy his independence, and make him the tool of Congress. Finally the device of an electoral college was adopted. Each state is entitled to a number of electors equal to the number of its representatives in Congress, plus two, the number of its senators. . . . At first the electoral votes did not state whether the candidates named in them were candidates for the presidency or for the vice-presidency. Each elector simply wrote down two names, only one of which could be the name of a citizen of his own state. . . . The candidate who had the largest number of votes, provided they were a majority of the whole number, was declared president. . . . By the twelfth amendment to the constitution, declared in force in 1804, the present method was adopted. The electors make separate ballots for president and for vice-president."—John Fiske, *Civil Government in the United States*, pp. 225-7.—See, also, PRESIDENT; and CONSTITUTION OF THE UNITED STATES.
